Re: Craig Residential Wetland Survey Event
Parcel No. 12-023-3131810313001
Lake City, Florida

Mr. and Mrs. Craig,

Environmental Research and Technology, LLC (ERT) has completed a wetland survey event on Parcel No. 12-023-3131810313001 in Lake City, Florida. The wetland survey event was conducted to identify wetlands adjacent to the Craig residence, specifically to determine if the location of the proposed swimming pool is at least 35-feet from any wetland located on the property.

Wetland Survey Event Summary – August 31, 2025

No wetlands were found in the vicinity of the proposed pool location. A surface water feature, a 0.7-acre pond is south of and adjacent to the proposed pool location. ERT collected one soil boring, SB-1 to determine if hydric soils were present and 24 points, A1 to A24 to delineate the extent of the pond. Measurements from A1 to the edge of the proposed pool construction location was 41-feet. Please see Figure 1 included in Attachment A of this report for the location of the pond and the proposed pool location. No hydric soils were present in SB-1.

Points A1 through A24 were digitally collected using Avenza and these locations are identified in Figure 1 and Table A below.

Table A

Pond Feature	FLUCCs	Feature	Size-Acres	Pre-UMAM Score
A1-A24	FLUCCs 500	Pond	0.7	LLS-5/WE-6-/CS-5

Figure

Figure 1 depicts the surface water feature using digital orthoquad imagery.

Summary

Based on the results of the wetland survey conducted by ERT it was determined that no wetlands were located within 35 feet of the proposed pool location. A pond is adjacent to the residence and the closest point to the proposed pool location, A1 on the northern edge of the pond, was measured at 41-feet from the southern edge of the pool construction area.
