

ADDENDUM NO 2
2023-07
CR6 WIDENING AND RESURFACING

The following changes to Technical Special Provision

Section T401A – Restore Spalled Areas, Shotcrete

1. Using a wet mix - The conditions to use the wet mix are the air supply (T401A-2) will be required to be a minimum of 200 cfm's. Also, the standard operating psi for the wet pump is closer to 800 psi, to compact the material during the application. If these conditions can be satisfied, then using a wet mix is allowable.
