POCKET PENETROMETER TEST

The pocket penetrometer tests are rounded down to _____ psi
or check here to declare 1000 lb. soil ☒ without testing.

X _____ X _____ AS CHECKED 1000 X _____

POCKET PENETROMETER TESTING METHOD

1. Test the perimeter of the home at 6 locations.
2. Take the reading at the depth of the footer.
3. Using 500 lb. increments, take the lowest reading and round down to that increment.

X _____ X _____ X _____

TORQUE PROBE TEST

The results of the torque probe test is _____ inch pounds or check here if you are declaring 5' anchors without testing. A test showing 275 inch pounds or less will require 5 foot anchors.

Note: A state approved lateral arm system is being used and 4 ft. anchors are allowed at the sidewall locations. I understand 5 ft. anchors are required at all centerline tie points where the torque test reading is 275 or less and where the mobile home manufacturer may require anchors with 4000 lb holding capacity.

HP Installer's initials

ALL TESTS MUST BE PERFORMED BY A LICENSED INSTALLER

Installer Name Al Pinson

Date Tested M/W M/W Sys

Electrical

Connect electrical conductors between multi-wide units, but not to the main power source. This includes the bonding wire between multi-wide units. Pg. _____

Plumbing

Connect all sewer drains to an existing sewer tap or septic tank. Pg. _____

Connect all potable water supply piping to an existing water meter, water tap, or other independent water supply systems. Pg. _____

Site Preparation

Debris and organic material removed ☒ Swale _____ Pad _____ Other _____

Water drainage: Natural ☒

Fastening multi wide units

Floor: Type Fastener: Lags Length: 5'45" Spacing: 20"
Walls: Type Fastener: Lags Length: 5'45" Spacing: 20"
Roof: Type Fastener: NA Length: - Spacing: 24"
For used homes a min. 30 gauge, 8" wide, galvanized metal strip will be centered over the peak of the roof and fastened with galv. roofing nails at 2' on center on both sides of the centerline.

Gasket (weatherproofing requirement)

I understand a properly installed gasket is a requirement of all new and used homes and that condensation, mold, mildew and buckled marriage walls are a result of a poorly installed or no gasket being installed. I understand a strip of tape will not serve as a gasket.

MEMORANDUM

June 14, 2002

TO: All Anchor and Component Manufacturers

FROM: Philip R. Bergelt, Program Manager *PRB*
Bureau of Mobile Home and Recreational Vehicle Construction

SUBJECT: Lateral Arm Stabilizer Systems

To ensure consumer protection and to ensure that minimum standards are met in the installation of Lateral Arm Stabilizing Systems, it is necessary for us to create uniform installation standards for these systems. A secondary benefit of uniform standards will be the clarification of installation procedures for installers and for county and city inspectors performing field oversight.

Effective immediately all Florida lateral arm stabilizing instructions will include the following prescriptive number of systems:

Four (4) systems up to 52 feet
Six (6) systems from 52 to 80 feet

Five (5) 12 pitch roofs will require a minimum of the following number of lateral arm stabilizing systems, unless a greater number is specified by your engineering:

Six (6) systems up to 52 feet
Eight (8) systems from 52 to 80 feet

Your instructions should contain the following three (3) notes:

- Note: 1) The use of this system requires sidewall vertical ties at no greater than 5'4" on center and allows for the use of 4' anchors.
- Note: 2) Centerline anchors to be sized according to soil torque condition. Any manufacturer's specifications for sidewall anchor loads in excess of 4,000 lbs. require a 5' anchor.
- Note: 3) Each system is required to have a frame tie and stabilizer attached at each lateral arm stabilizing location.

Installation Instructions for Model LLBS Longitudinal and Lateral Bracing System Approved for Florida

Revised: 6/17/02

Note: Your set must be designed by a Registered Professional Engineer if all or one of the following conditions occur:

Location is within 1,500 feet of Coast Roof eaves exceeds 16"
Pier Height exceeds 48" Main beam spacing exceeds 99.5"
Sidewall height exceeds 96"

1. Refer to the Home Manufacturer Installation Instructions for pier locations. 6" Disc anchors 48" long with vertical ties are required at maximum 5'-4" center along both sidewalls starting a maximum of 2'-0" in from each end of the home. Vertical ties must be used at all connection points furnished by the home manufacturer. Centerline anchors to be sized according to soil torque condition. Any manufacturer's specifications for sidewall anchor loads in excess of 4,000 lbs require a 5' anchor.
2. Refer to the Foundation Plans for the location of Longitudinal Lateral Bracing System.. (See Attached). Each system is required to have a frame tie and stabilizer attached at each lateral arm stabilizing location.
3. Remove turf to expose firm soil at each SD3 pad location.
4. Attach tube clip to SD3 pier pads (see Detail Assembly Drawing) center pad under beam, level pad. Angle Drive Pins may be driven vertically through four (4) slots in SD3 pier pad now or after home is totally set. Angle drive pins may be driven up to ten degrees (10) off of vertical. If you choose to drive pins after home is set, do not cover slots in pier pad.
5. Level home on concrete blocks or deluxe steel pier by Minute Man.
6. Install Longitudinal and Lateral Bracing in accordance with Foundation Plan and Detail Assembly Drawing.
7. Install vertical anchors, frame ties and stabilizers at each lateral arm system location..

Thank you for using Minute Man Products, Inc. If you have any questions, please call Toll Free at (800) 438-7277.
