

1. The first step in the process of identifying a problem is to define the problem. This involves identifying the symptoms of the problem and determining the scope of the problem.
2. The second step is to identify the causes of the problem. This involves identifying the factors that are contributing to the problem and determining the underlying causes.
3. The third step is to develop a plan of action. This involves identifying the steps that need to be taken to solve the problem and determining the resources that will be needed.
4. The fourth step is to implement the plan. This involves putting the plan into action and monitoring the progress of the solution.
5. The fifth step is to evaluate the results. This involves assessing the effectiveness of the solution and determining whether the problem has been solved.
