To whom it may concern,

J&S Roofing was called by Mr. Trevor Cayson regarding his roof at 159 South West Pleasant Hill Glen Fort White, FL 32038. The roof is a 26GA exposed fastener metal roof over purlins, over one layer of shingles. The metal roofs on the house and the detached garage were not permitted when they were installed by someone else about 3 years ago. We performed a detailed inspection of both the main house and detached garage by removing panels in different areas and checking the nailing pattern of the purlins, as well as the screw spacing and nailing of the eaves drip, valley and other flashings. We have found that everything is up to the Florida building code and there are no issues with the roof. J&S Roofing certifies that the roof is up to FBC standards, and we would like to pull a permit on it. Please see attached permit application.
