Mandatory Requirements (as applicable) Mandatory requirements compiled by US Department of Energy and Pacific Northwest National Laboratory. Adopted with permission Yes N/A Exempt **Topic** Section Component Description 1. To be checked by Designer or Engineer Insulation C303.2 Envelope Below-grade wall insulation installed per manufacturer's instructions. Insulation C303.2 Envelope Slab edge insulation installed per manufacturer's instructions. C303.2 Insulation Envelope Above-grade wall insulation installed per manufacturer's instructions. C402.3 Insulation Envelope High-albedo roofs satisfy one of the following: 3-year-aged solar reflectance >= 0.55 and thermal emittance >= 0.75 or 3-year-aged solar reflectance index >= 64.0. C402.4.4 Fenestration Envelope U-factor of opaque doors associated with the building thermal envelope meets requirements. SYSTEM_SPECIFIC C403.2.12.1 Mechanical HVAC fan systems at design conditions do not exceed allowable fan system motor nameplate hp or fan system bhp. SYSTEM_SPECIFIC C403.2.12.2 Mechanical HVAC fan motors not oversized beyond allowable SYSTEM_SPECIFIC C403.2.3(8) Table Mechanical Heat Rejection Equipment: Minimum Efficiency Requirement meet those listed in Table C403.2.3(8) **HVAC** C403.2.7 Mechanical Exhaust air energy recovery on systems meeting Table C403.2.7(1) and C403.2.7(2). SYSTEM_SPECIFIC C403.3 Mechanical Air economizers provided where required, meet the requirements for design capacity, control signal, ventilation controls, high-limit shut-off, integrated economizer control, and provide a means to relieve excess outside air during operation. SYSTEM_SPECIFIC C403 3 2 Mechanical Economizer operation will not increase heating energy use during normal operation. SYSTEM_SPECIFIC C403.3.4, Mechanical Water economizers provided where required, C403.3.4.1. meet the requirements for design capacity, C403.3.4.2, maximum pressure drop and integrated C403.3.1 economizer control. SYSTEM_SPECIFIC C403.4.2.1 Mechanical Three-pipe hydronic systems using a common return for hot and chilled water are not used. SYSTEM SPECIFIC C403.4.2.3.1 Mechanical Hydronic heat pump systems connected to a common water loop meet heat rejection and heat addition requirements. SYSTEM_SPECIFIC C403.4.3.4 Mechanical Open-circuit cooling towers having water cooled chiller systems and multiple or vairable speed condenser pumps, are designed so that tower cells can run in parallel with larger of flow crtieria. SYSTEM_SPECIFIC C404.2 Mechanical Service water heating equipment meets efficiency requirements. C405.3 Wattage Interior Lighting Exit signs do not exceed 5 watts per face. 2. To be checked by Plan Reviewer

Plans and/or specifications provide all information with which compliance can be determined for the building envelope and document where exceptions to the standard are claimed.

SYSTEM_SPECIFIC	C403.4.2	Mechanical	the zones requiring the most pressure. Temperature reset by representative building loads in pumping systems for chiller and boiler systems >500,000 Btu/h.	

7/6/2020 Page 9 of 20

SYSTEM_SPECIFIC	C403.4.2.3.2.1	Mechanical	Closed-circuit cooling tower within heat pump loop have either automatic bypass valve or lower leakage positive closure dampers. Open-circuit tower within heat pump loop have automatic valve to bypass all heat pump water flow around the tower. Open- or cl	
SYSTEM_SPECIFIC	C403.4.2.4	Mechanical	Hydronic systems greater than 500,000 Btu/h designed for variable fluid flow.	
SYSTEM_SPECIFIC	C403.4.2.5	Mechanical	System turndown requirement met through multiple single-input boilers, one or more modulating boilers, or a combination of single-input and modulating boilers. Boiler input between 1.0 MBtu/h and 5 MBtu/h has 3:1 turndown ratio, boiler input between 5.0	
SYSTEM_SPECIFIC	C403.4.2.6	Mechanical	Chilled water plants with multiple chillers have capability to reduce flow automatically through the chiller plant when a chiller is shut down. Boiler plants with multiple boilers have the capability to reduce flow automatically through the boiler plant	
SYSTEM_SPECIFIC	C403.4.3, C403.4.3.2	Mechanical	Fan systems with motors >=7.5 hp associated with heat rejection equipment to have capability to operate at 2/3 of full-speed and auto speed controls to control the leaving fluid temperature or condensing temp/pressure of heat rejection device.	
SYSTEM_SPECIFIC	C403.4.4.5	Mechanical	Multiple zone HVAC systems have supply air temperature reset controls.	
SYSTEM_SPECIFIC	C403.4.4.6	Mechanical	Multiple zone VAV systems with DDC of individual zone boxes have static pressure setpoint reset controls.	
SYSTEM_SPECIFIC	C404.2.1	Mechanical	Gas-fired water-heating equipment installed in new buildings: where a singular piece of water-heating equipment >= 1,000 kBtu/h serves the entire building, thermal efficiency >= 90 Et. Where multiple pieces of water-heating	
SYSTEM_SPECIFIC	C404.4	Mechanical	equipment serve the building wi All piping insulated in accordance with section details and Table C403.2.10.	
SYSTEM_SPECIFIC	C404.5, C404.5.1, C404.5.2	Mechanical	Heated water supply piping conforms to pipe length and volume requirements. Refer to section details.	
SYSTEM_SPECIFIC	C404.6.3	Mechanical	Pumps that circulate water between a heater and storage tank have controls that limit operation from startup to <= 5 minutes after end of heating cycle.	
SYSTEM_SPECIFIC	C404.7	Mechanical	Water distribution system that pumps water from a heated-water supply pipe back to the heated-water source through a cold-water supply pipe is a demand recirculation water system. Pumps within this system have controls that start the pump upon receiving	
Wattage	C405.5.1	Exterior Lighting	Exterior lighting power is consistent with what is shown on the approved lighting plans, demonstrating proposed watts are less than or equal to allowed watts.	
Plan Review	C405.6	Project	Group R-2 dwelling units have separate electrical meters.	
Plan Review	C406	Project	Plans, specifications, and/or calculations provide all information with which compliance can be determined for the additional energy efficiency package options.	
SYSTEM_SPECIFIC	C408.2.2.2	Mechanical	HVAC hydronic heating and cooling coils have means to balance and have pressure test connections.	
SYSTEM_SPECIFIC	C408.2.2.2	Mechanical	HVAC hydronic heating and cooling coils have means to balance and have pressure test connections.	

7/6/2020 Page 10 of 20

		3. To be o	checked by Inspector	
Insulation	C303.1	Envelope	Roof insulation installed per manufacturer's instructions. Blown or poured loose-fill insulation is installed only where the roof slope is <=3 in 12.	
Insulation	C303.1	Envelope	Building envelope insulation is labeled with R-value or insulation certificate providing R-value and other relevant data.	
Fenestration	C303.1.3	Envelope	Fenestration products rated in accordance with NFRC.	
Fenestration	C303.1.3	Envelope	Fenestration products are certified as to performance labels or certificates provided.	
Insulation	C303.2, C402.2.4	Envelope	Floor insulation installed per manufacturer's instructions. Cavity or structural slab insulation installed in permanent contact with underside of decking or structural slabs.	
Insulation	C303.2.1	Envelope	Exterior insulation protected against damage, sunlight, moisture, wind, landscaping and equipment maintenance activities.	
Insulation	C303.2.1	Envelope	Exterior insulation is protected from damage with a protective material. Verification for exposed foundation insulation may need to occur during Foundation Inspection.	
Insulation	C402.1.3	Envelope	Non-swinging opaque doors have R-4.75 insulation.	
Insulation	C402.2.2	Envelope	Skylight curbs are insulated to the level of roofs with insulation above deck or R-5.	
Insulation	C402.2.2	Envelope	Insulation intended to meet the roof insulation requirements cannot be installed on top of a suspended ceiling. Mark this requirement compliant if insulation is installed accordingly.	
Air Leakage	C402.5	Envelope	Building envelope contains a continuous air barrier that has been tested and deemed to limit air leakage <= 0.40 cfm/ft2.	
Air Leakage	C402.5.1	Envelope	The building envelope contains a continuous air barrier that is sealed in an approved manner and either constructed or tested in an approved manner. Air barrier penetrations are sealed in an approved manner.	
Air Leakage	C402.5.1.1	Envelope	All sources of air leakage in the building thermal envelope are sealed, caulked, gasketed, weather stripped or wrapped with moisture vapor-permeable wrapping material to minimize air leakage.	
Air Leakage	C402.5.1.2.1	Envelope	The building envelope contains a continuous air barrier that is sealed in an approved manner and material permeability <= 0.004 cfm/ft2. Air barrier penetrations are sealed in an approved manner.	
Air Leakage	C402.5.1.2.2	Envelope	The building envelope contains a continuous air barrier that is sealed in an approved manner and average assembly air leakage <= 0.04 cfm/ft2. Air barrier penetrations are sealed in an approved manner.	
Air Leakage	C402.5.2, C402.5.4	Envelope	Factory-built fenestration and doors are labeled as meeting air leakage requirements.	
Air Leakage	C402.5.3	Envelope	Where open combustion air ducts provide combustion air to open combustion fuel burning appliances, the appliances and combustion air opening are located outside the building thermal envelope or enclosed in a room, isolated from inside the thermal envelope	
Air Leakage	C402.5.5, C403.2.4.3	Envelope	Stair and elevator shaft vents have motorized dampers that automatically close.	
Air Leakage	C402.5.5, C403.2.4.3	Envelope	Outdoor air and exhaust systems have motorized dampers that automatically shut when not in use and meet maximum leakage rates. Check gravity	
Air Leakage	C402.5.6	Envelope	dampers where allowed. Weatherseals installed on all loading dock cargo doors.	

7/6/2020 Page 11 of 20

Air Leakage	C402.5.8	Envelope	Recessed luminaires in thermal envelope to limit infiltration and be IC rated and labeled. Seal	
HVAC	C403.2.1	Mechanical	between interior finish and luminaire housing. HVAC systems and equipment design loads calculated in accordance with	
			ANSI/ASHRAE/ACCA Standard 183 or by an	
SYSTEM_SPECIFIC	C403.2.10	Mechanical	approved equivalent computational procedure HVAC piping insulation thickness. Where piping is installed in or under a slab, verification may	
HVAC	C403.2.3	Mechanical	need to occur during Foundation Inspection. HVAC equipment efficiency verified.	
SYSTEM_SPECIFIC	C403.2.3	Mechanical	PTAC and PTHP with sleeves 16 in. by 42 in. labeled for replacement only as per Footnote b to	
SYSTEM_SPECIFIC	C403.2.4.1	Mechanical	Table C403.2.3(3). Heating and cooling to each zone is controlled by a thermostat control. Minimum one humidity control device per installed	
SYSTEM_SPECIFIC	C403.2.4.1.1	Mechanical	humidification/dehumidification system. Heat pump controls prevent supplemental electric resistance heat from coming on when not needed.	
HVAC	C403.2.4.1.2	Mechanical	Thermostatic controls have a 5 ŰF deadband.	
HVAC	C403.2.4.1.2	Mechanical	Thermostatic controls have a 5 ŰF deadband.	
HVAC	C403.2.4.1.3	Mechanical	Temperature controls have setpoint overlap restrictions.	
HVAC	C403.2.4.2.1, C403.2.4.2.2	Mechanical	Automatic Controls: Setback to 55°F (heat) and 85°F (cool); 7-day clock, 2-hour occupant	
SYSTEM_SPECIFIC	C403.2.4.2.3	Mechanical	override, 10-hour backup Systems include optimum start controls.	
HVAC	C403.2.4.5, C403.2.4.6	Mechanical	Snow/ice melting system sensors for future connection to controls. Freeze protection systems have automatic controls installed.	
HVAC	C403.2.6.2	Mechanical	Enclosed parking garage ventilation has automatic contaminant detection and capacity to stage or modulate fans to 50% or less of design	
HVAC	C403.2.9	Mechanical	capacity. HVAC ducts and plenums insulated. Where ducts or plenums are installed in or under a slab, verification may need to occur during Foundation	
SYSTEM_SPECIFIC	C403.2.9.1.3	Mechanical	Inspection. Ductwork operating >3 in. water column requires air leakage testing.	
SYSTEM_SPECIFIC	C403.4.1.2	Mechanical	VAV fans have static pressure sensors located so controller setpoint <=1.2 w.c	
SYSTEM_SPECIFIC	C403.4.2.2	Mechanical	Two-pipe hydronic systems using a common distribution system have controls to allow a deadband >=15°F, allow operation in one mode for at least 4 hrs before changeover, and have rest controls to limit heating and cooling supply	
SYSTEM_SPECIFIC	C403.4.2.3.3	Mechanical	temperature to <=30 °F. Two-position automatic valve interlocked to shut off water flow when hydronic heat pump with	
SYSTEM_SPECIFIC	C403.4.4.5, C403.4.4.5.1-4	Mechanical	pumping system >10 hp is off. Zone controls can limit simultaneous heating and cooling and sequence heating and cooling to each	
SYSTEM_SPECIFIC	C403.4.5	Mechanical	zone. Condenser heat recovery system that can heat water to 85°F or provide 60% of peak heat rejection is installed for preheating of service hot	
SYSTEM_SPECIFIC	C403.4.6	Mechanical	water. Hot gas bypass limited to: <=240 kBtu/h - 50% capacity,	
SYSTEM_SPECIFIC	C404.3	Mechanical	>240 kBtu/h - 25% capacity Heat traps installed on non-circulating storage water tanks.	

SYSTEM_SPECIFIC	C404.3	Mechanical	Heat traps installed on supply and discharge piping of non-circulating systems.	
SYSTEM_SPECIFIC	C404.3	Mechanical	Heat traps installed on supply and discharge piping of non-circulating systems.	
SYSTEM_SPECIFIC	C404.6.1	Mechanical	Controls are installed that limit the operation of a recirculation pump installed to maintain temperature of a storage tank. System return pipe is a dedicated return pipe or a cold water supply	
SYSTEM_SPECIFIC	C404.6.1, C404.6.2	Mechanical	pipe. Automatic time switches installed to automatically switch off the recirculating hot-water system or	
SYSTEM_SPECIFIC	C404.9.1	Mechanical	heat trace. Pool heaters are equipped with on/off switch and no continuously burning pilot light.	
SYSTEM_SPECIFIC	C404.9.2	Mechanical	Time switches are installed on all pool heaters and pumps.	
SYSTEM_SPECIFIC	C404.9.2	Mechanical	Time switches are installed on all pool heaters and pumps.	
SYSTEM_SPECIFIC	C404.9.3	Mechanical	Vapor retardant pool covers are provided for heated pools and permanently installed spas.	
Controls	C405.2.1	Interior Lighting	Lighting controls installed to uniformly reduce the lighting load by at least 50%.	
Controls	C405.2.1	Interior Lighting	Occupancy sensors installed in required spaces.	
Controls	C405.2.1, C405.2.2.3	Interior Lighting	Independent lighting controls installed per approved lighting plans and all manual controls	
Controls	C405.2.2.1	Interior Lighting	readily accessible and visible to occupants. Automatic controls to shut off all building lighting installed in all buildings.	
Controls	C405.2.3	Interior Lighting	Daylight zones provided with individual controls that control the lights independent of general area lighting.	
Controls	C405.2.3, C405.2.3.1, C405.2.3.2	Interior Lighting	Primary sidelighted areas are equipped with required lighting controls.	
Controls	C405.2.3, C405.2.3.1, C405.2.3.3	Interior Lighting	Enclosed spaces with daylight area under skylights and rooftop monitors are equipped with required lighting controls.	
Controls	C405.2.4	Interior Lighting	Separate lighting control devices for specific uses installed per approved lighting plans.	
Wattage	C405.2.4	Interior Lighting	Additional interior lighting power allowed for special functions per the approved lighting plans and is automatically controlled and separated	
Controls	C405.2.5	Exterior Lighting	from general lighting. Automatic lighting controls for exterior lighting installed. Controls will be daylight controlled, set based on business operation time-of-day, or reduce connected lighting > 30%.	
Wattage	C405.4.1	Interior Lighting	Interior installed lamp and fixture lighting power is consistent with what is shown on the approved lighting plans, demonstrating proposed watts are	
Mandatory Additional Eff	C406.4	Project	less than or equal to allowed watts. Enhanced digital lighting controls efficiency package: Interior lighting has following enhanced lighting controls in accordance with Section C405.2.2: Luminaires capable of continuous dimming and being addressed individually, <= 8 luminaires controlled in	
Mandatory Additional Eff	C406.6	Project	Dedicate outdoor air system efficiency package: Buildings with hydronic and/or multiple-zone HVAC systems are equipped with an independent ventilation system designed to provide >= 100-percent outdoor air to each individual occupied space, as specified by	

7/6/2020 Page 13 of 20

Mandatory Additional Eff	C406.7, C406.7.1	Project	Enhanced Service Water Heat System efficiency package. One of the following SWH system enhancements must satisfy 60 percent of hot water requirements, or 100 percent if the building otherwise complies with heat recovery per Section C403.4.5: Waste heat re	
HVAC	C408.2.2.1	Mechanical	Air outlets and zone terminal devices have means for air balancing.	
HVAC	C408.2.2.1	Mechanical	Air outlets and zone terminal devices have means for air balancing.	
Testing	C408.2.3.2	Mechanical	HVAC control systems have been tested to ensure proper operation, calibration and adjustment of controls.	
4. To be	checked by In		roject Completion and Prior to Issua	ance of
Post Construction	C303.3, C408.2.5.2	Interior Lighting	te of Occupancy Furnished O&M instructions for systems and equipment to the building owner or designated representative.	
Post Construction	C303.3, C408.2.5.3	Mechanical	Furnished O&M manuals for HVAC systems within 90 days of system acceptance.	
Fenestration	C402.4.2.2	Envelope	Skylights in office, storage, automotive service, manufacturing, non-refrigerated warehouse, retail store, and distribution/sorting area have a measured haze value > 90 percent unless designed to exclude direct sunlight.	
Post Construction	C408.2.1	Mechanical	Commissioning plan developed by registered design professional or approved agency.	
Post Construction	C408.2.3.1	Mechanical	HVAC equipment has been tested to ensure proper operation.	
Post Construction	C408.2.3.3	Mechanical	Economizers have been tested to ensure proper operation.	
Post Construction	C408.2.4	Mechanical	Preliminary commissioning report completed and certified by registered design professional or
