Florida Building Code, Seventh Edition (2020) - Energy Conservation

EnergyGauge Summit® Fla/Com-2020, Effective Date: Dec 31, 2020 C402.1.3: FBC Total Building Performance Compliance Option

	Check List
Applic includ	ations for compliance with the Florida Building Code, Energy Conservation shall e:
	This Checklist
	The full compliance report generated by the software that contains the project summary, compliance summary, certifications and detailed component compliance reports.
	The compliance report must include the full input report generated by the software as contigous part of the compliance report.
	Boxes appropriately checked in the Mandatory Section of the complaince report.

PROJECT SUMMARY

Short Desc: MUvLC Description: MuV LAKE CITY

Owner:

Address1:2938 US-90City:LAKE CITYAddress2:State:FLORIDA

Zip: 32025

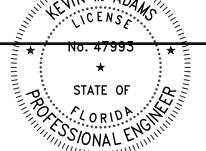

Type: Retail Class: Renovation to existing building

Jurisdiction: LAKE CITY, COLUMBIA COUNTY, FL (221200)

Conditioned Area:2420 SFConditioned & UnConditioned Area:2420 SFNo of Stories:1Area entered from Plans2420 SFPermit No:0Max Tonnage5.9

Mandatory Requirements (as applicable)

Requirements compiled by US Department of Energy and Pacific Northwest National Laboratory. Adopted for FBC with permission. Not all may be applicable

Topic	Section	Component	·	Yes N/A Exempt
	1. To	be checked	by Designer or Engineer	
Insulation	C303.2	Envelope	Below-grade wall insulation installed per manufacturer's instructions.	
Insulation	C303.2	Envelope	Slab edge insulation installed per manufacturer's instructions.	
Insulation	C303.2	Envelope	Above-grade wall insulation installed per manufacturer's instructions.	
Insulation	C402.3	Envelope	High-albedo roofs satisfy one of the following: 3-year-aged solar reflectance >= 0.55 and thermal emittance >= 0.75 or 3-year-aged solar reflectance index >= 64.0.	
Fenestration	C402.4.4	Envelope	U-factor of opaque doors associated with the building thermal envelope meets requirements.	
HVAC	C403.2.7	Mechanical	Exhaust air energy recovery on systems meeting Table C403.2.7(1) and C403.2.7(2).	
HVAC	C403.2.4.8	Mechanical	HVAC systems serving guestrooms in Group R-1 buildings with > 50 guestrooms: Each guestroom is provided with controls that automatically manage temperature setpoint and ventilation (see sections C403.2.4.8.1 and C403.2.4.8.2).	
SYSTEM_SPECIFIC	C403.3, C403.3.1, C403.3.2	Mechanical	Air economizers provided where required, meet the requirements for design capacity, control signal, ventilation controls, high-limit shut-off, integrated economizer control, and provide a means to relieve excess outside air during operation.	
SYSTEM_SPECIFIC	C403.3.2	Mechanical	Economizer operation will not increase heating energy use during normal operation.	
SYSTEM_SPECIFIC	C403.3.3.3	Mechanical	Air economizers automatically reduce outdoor air intake to the design minimum outdoor air quantity when outdoor air intake will not reduce cooling energy usage. See Table C403.3.3.3 for applicable device types and climate zones.	
SYSTEM_SPECIFIC	C403.3.3.4	Mechanical	System capable of relieving excess outdoor air during air economizer operation to prevent overpressurizing the building. The relief air outlet located to avoid recirculation into the building.	
SYSTEM_SPECIFIC	C403.3.3.5	Mechanical	Return, exhaust/relief and outdoor air dampers used in economizers have motorized dampers that automatically shut when not in use and meet maximum leakage rates. Reference section C403.2.4.3 for details.	
SYSTEM_SPECIFIC	C403.3.4, C403.3.4.1, C403.3.4.2, C403.3.1	Mechanical	Water economizers provided where required, meet the requirements for design capacity, maximum pressure drop and integrated economizer control.	
SYSTEM_SPECIFIC	C403.4.2.1	Mechanical	Three-pipe hydronic systems using a common return for hot and chilled water are not used.	
SYSTEM_SPECIFIC	C403.4.2.3.1	Mechanical	Hydronic heat pump systems connected to a common water loop meet heat rejection and heat	
SYSTEM_SPECIFIC	C403.4.3.2	Mechanical	addition requirements. Multiple-cell heat rejection equipment with variable speed fan drives are controlled to operate the maximum number of fans allowed and so that all fans operate at the same fan speed required for the instantaneous cooling duty. The minimum fan speed will be the minimum allowable speed of the fan drive system in accordance with the manufacturer's recommendations.	

SYSTEM_SPECIFIC	C403.4.3.4	Mechanical	Open-circuit cooling towers having water cooled chiller systems and multiple or vairable speed condenser pumps, are designed so that tower cells	
SYSTEM_SPECIFIC	C403.4.4	Mechanical	can run in parallel with larger of flow crtieria. Supply air systems serving multiple zones have VAV systems with controls configured to reduce the volume of air that is reheated, recooled or mixed in	
SYSTEM_SPECIFIC	C403.4.4.1	Mechanical	each zone. See section for details. Single-duct VAV systems use terminal devices configured to reduce the supply of primary supply	
SYSTEM_SPECIFIC	C403.4.4.2	Mechanical	air before reheating or recooling takes place. Systems that have 1 warm air duct and 1 cool air duct use terminal devices configured to reduce the flow from one duct to a minimum before mixing of	
SYSTEM_SPECIFIC	C403.4.4.3	Mechanical	air from the other duct takes place. Individual dual-duct or mixing heating and cooling systems with a single fan and with total capacities >	
SYSTEM_SPECIFIC	C404.2	Mechanical	90,000 Btu/h not equipped with air economizers. Service water heating equipment meets efficiency requirements.	
SYSTEM_SPECIFIC	Table_C403.3.2(8)a	Mechanical	Heat Rejection Equipment: Minimum Efficiency Requirement >=40.2 gpm/hp .	
SYSTEM_SPECIFIC	Table_C403.3.2(8)b	Mechanical	Heat Rejection Equipment: Minimum Efficiency Requirement >=20.0 gpm/hp.	
SYSTEM_SPECIFIC	Table_C403.3.2(8)c	Mechanical	Heat Rejection Equipment: Minimum Efficiency Requirement >=16.1 gpm/hp.	
SYSTEM_SPECIFIC	Table_C403.3.2(8)d	Mechanical	Heat Rejection Equipment: Minimum Efficiency Requirement >=7.0 gpm/hp	
SYSTEM_SPECIFIC	Table_C403.3.2(8)e	Mechanical	Heat Rejection Equipment: Minimum Efficiency Requirement >=134 kBtu/h-hp w/ Ammonia test fluid.	
SYSTEM_SPECIFIC	Table_C403.3.2(8)f	Mechanical	Heat Rejection Equipment: Minimum Efficiency Requirement >=110 kBtu/h-hp w/ Ammonia test fluid.	
SYSTEM_SPECIFIC	Table_C403.3.2(8)g	Mechanical	Heat Rejection Equipment: Minimum Efficiency Requirement >=157 kBtu/h-hp w/ R-507A test fluid.	
SYSTEM_SPECIFIC	Table_C403.3.2(8)h	Mechanical	Heat Rejection Equipment: Minimum Efficiency Requirement >=135 kBtu/h-hp w/ R-507A test fluid.	
SYSTEM_SPECIFIC	Table_C403.3.2(8)i	Mechanical	Heat Rejection Equipment: Minimum Efficiency Requirement >=176 kBtu/h-hp.	
SYSTEM_SPECIFIC	C403.2.12.1	Mechanical	HVAC fan systems at design conditions do not exceed allowable fan system motor nameplate hp	
SYSTEM_SPECIFIC	C403.2.12.2	Mechanical	or fan system bhp. HVAC fan motors not oversized beyond allowable limits.	
SYSTEM_SPECIFIC	C403.2.12.3	Mechanical	Fans have efficiency grade (FEG) >= 67. The total efficiency of the fan at the design point of operation	
SYSTEM_SPECIFIC	C403.2.12.4	Mechanical	<= 15% of maximum total efficiency of the fan. Motors for fans that are not less than 1/12 hp and less than 1 hp are electronically commutated motors or have a minimum motor efficiency of 70 percent. These motors have the means to adjust	
SYSTEM_SPECIFIC	C403.2.12.5	Mechanical	motor speed. Each DX cooling system > 65 kBtu and chiller water/evaporative cooling system with fans > 1/4 hp are designed to vary the indoor fan airflow as a function of load and comply with detailed requirements of this section.	
	2	2. To be che	cked by Plan Reviewer	
Plan Review	C103.2	Envelope	Plans and/or specifications provide all information with which compliance can be determined for the building envelope and document where exceptions to the standard are claimed.	

Plan Review	C103.2	Mechanical	Plans, specifications, and/or calculations provide all information with which compliance can be determined for the mechanical systems and equipment and document where exceptions to the	
Plan Review	C103.2	Mechanical	standard are claimed. Load calculations per acceptable engineering standards and handbooks. Plans, specifications, and/or calculations provide all information with which compliance can be determined for the service water heating systems	
Plan Review	C103.2	Interior Lighting	and equipment and document where exceptions to the standard are claimed. Hot water system sized per manufacturer's sizing guide. Plans, specifications, and/or calculations provide all information with which compliance can be determined for the interior lighting and electrical	
			systems and equipment and document where exceptions to the standard are claimed. Information provided should include interior lighting power calculations, wattage of bulbs and ballasts, transformers and control devices.	
Plan Review	C103.2	Exterior Lighting	Plans, specifications, and/or calculations provide all information with which compliance can be determined for the exterior lighting and electrical systems and equipment and document where exceptions to the standard are claimed. Information provided should include exterior lighting power calculations, wattage of bulbs and ballasts,	
Insulation	C402.2.5	Envelope	transformers and control devices. Slab edge insulation depth/length. Slab insulation extending away from building is covered by	
Insulation	C402.2.4	Envelope	pavement or >= 10 inches of soil. Installed floor insulation type and R-value consistent with insulation specifications reported in plans and	
Insulation	C402.2.6	Project	COMcheck reports. Radiant heating systems panels insulated to >=R-3.5 on face opposite space being heated.	
HVAC	C402.2.6	Mechanical	Thermally ineffective panel surfaces of sensible heating panels have insulation >= R-3.5.	
Insulation	C402.2.6	Envelope	Radiant panels and associated components, designed for heat transfer from the panel surfaces to the occupants or indoor space are insulated with	
Air Leakage	C402.5.7	Envelope	a minimum of R-3.5. Vestibules are installed on all building entrances. Doors have self-closing devices.	
HVAC	C403.2.13	Mechanical	Systems that heat outside the building envelope are radiant heat systems controlled by an	
HVAC	C403.2.4.2	Mechanical	occupancy sensing device or timer switch. Each zone equipped with setback controls using automatic time clock or programmable control	
HVAC	C403.2.4.2	Mechanical	system. Each zone equipped with setback controls using automatic time clock or programmable control	
HVAC	C403.2.4.2	Mechanical	system. Each zone equipped with setback controls using automatic time clock or programmable control	
SYSTEM_SPECIFIC	C403.2.4.4	Mechanical	system. Zone isolation devices and controls installed where applicable.	
SYSTEM_SPECIFIC	C403.2.4.4	Mechanical	Zone isolation devices and controls installed where applicable.	
SYSTEM_SPECIFIC	C403.2.4.7	Mechanical	Fault detection and diagnostics installed with air-cooled unitary DX units having economizers.	
SYSTEM_SPECIFIC	C403.2.5	Mechanical	Hot water boilers supplying heat via one- or two-pipe systems include outdoor setback control.	
HVAC	C403.2.6	Mechanical	Natural or mechanical ventilation is provided in accordance with International Mechanical Code Chapter 4. Mechanical ventilation has capability to reduce outdoor air supply to minimum per IMC Chapter 4.	

HVAC	C403.2.6.1	Mechanical	Demand control ventilation provided for spaces >500 ft2 and >25 people/1000 ft2 occupant density and served by systems with air side economizer, auto modulating outside air damper control, or	
SYSTEM_SPECIFIC	C403.2.12.5.1	Mechanical	design airflow >3,000 cfm. Hydronic and multizone HVAC system controls are VAV fans driven by mechanical or electrical	
SYSTEM_SPECIFIC	C403.2.12.5.3	Mechanical	variable speed drive per Table C403.2.12.5. Reset static pressure setpoint for DDC controlled	
SYSTEM_SPECIFIC	C403.4.2	Mechanical	VAV boxes reporting to central controller based on the zones requiring the most pressure. The heating of fluids in hydronic systems that have	
_			been previously mechanically cooled, and the cooling of fluids that have been previously mechanically heated are limited in accordance with Sections C403.4.2.1-C403.4.2.3. Single boiler systems >500,000 Btu/h have multistaged or	
SYSTEM_SPECIFIC	C403.4.2.3.2	Mechanical	modulating burner. Closed-circuit cooling tower within heat pump loop have either automatic bypass valve or lower leakage positive closure dampers. Open-circuit tower within heat pump loop have automatic valve to bypass all heat pump water flow around the tower. Open- or closed-circuit cooling towers used in conjunction with a separate heat exchanger have heat loss by shutting down the circulation pump on the cooling tower loop. Open- or closed circuit cooling towers have a separate heat exchanger to isolate the cooling tower from the heat pump loop,	
			and heat loss is controlled by shutting down the circulation pump on the cooling tower loop.	
SYSTEM_SPECIFIC	C403.4.2.4	Mechanical	Hydronic systems greater than 500,000 Btu/h designed for variable fluid flow. See section	
SYSTEM_SPECIFIC	C403.4.2.5	Mechanical	language for full details. System turndown requirement met through multiple single-input boilers, one or more modulating boilers, or a combination of single-input and modulating boilers.	
SYSTEM_SPECIFIC	C403.4.2.6	Mechanical	Boiler input between 1.0 MBtu/h and 5 MBtu/h has 3:1 turndown ratio, boiler input between 5.0 MBtu/h and 10 MBtu/h has 4:1 turndown ratio, boiler input > 10.0 MBtu/h has 5:1 turndown ratio. Chilled water plants with multiple chillers have capability to reduce flow automatically through the chiller plant when a chiller is shut down. Boiler plants with multiple boilers have the capability to reduce flow automatically through the	
SYSTEM_SPECIFIC	C403.4.3.1	Mechanical	boiler plant when a boiler is shut down. Fan systems with total system motor capacity >=5 hp associated with heat rejection equipment configured to automatically modulate the fan speed to control the leaving fluid temperature or	
SYSTEM_SPECIFIC	C403.4.3.3	Mechanical	condensing temp/pressure of heat rejection device. Centrifugal fan open-circuit cooling towers having combined rated capacity >= 1100 gpm meets	
SYSTEM_SPECIFIC	C403.4.4.5	Mechanical	minimum efficiency requirement: >=40.2 gpm/hp. Multiple zone HVAC systems have supply air temperature reset controls.	
SYSTEM_SPECIFIC	C403.4.4.6	Mechanical	Multiple zone VAV systems with DDC of individual zone boxes have static pressure setpoint reset controls.	
SYSTEM_SPECIFIC	C404.2.1	Mechanical	controls. Gas-fired water-heating equipment installed in new buildings: where a singular piece of water-heating equipment >= 1,000 kBtu/h serves the entire building, thermal efficiency >= 90 Et. Where multiple pieces of water-heating equipment serve the building with combined rating >= 1,000 kBtu/h, the combined input-capacity-weighted-average thermal efficiency >= 90 Et. Exclude input rating of equipment in individual dwelling units and equipment <= 100 kBtu/h.	

5/6/2022 Page 12 of 23

SYSTEM_SPECIFIC	C404.2.1	Mechanical	Gas-fired water-heating equipment installed in new buildings: where a singular piece of water-heating equipment >= 1,000 kBtu/h serves the entire building, thermal efficiency >= 90 Et. Where multiple pieces of water-heating equipment serve the building with combined rating >= 1,000 kBtu/h, the combined input-capacity-weighted-average thermal efficiency >= 90 Et. Exclude input rating of equipment in individual	
SYSTEM_SPECIFIC	C404.4	Mechanical	dwelling units and equipment <= 100 kBtu/h. All piping insulated in accordance with section details and Table C403.2.10.	
SYSTEM_SPECIFIC	C404.5, C404.5.1, C404.5.2	Mechanical	Heated water supply piping conforms to pipe length and volume requirements. Refer to section details.	
SYSTEM_SPECIFIC	C404.6.3	Mechanical	Pumps that circulate water between a heater and storage tank have controls that limit operation from	
SYSTEM_SPECIFIC	C404.7	Mechanical	startup to <= 5 minutes after end of heating cycle. Demand recirculation water systems have controls that start the pump upon receiving a signal from the action of a user of a fixture or appliance and limits the temperature of the water entering the cold-water piping to 104°F.	
Wattage	C405.4.1	Exterior Lighting	Exterior lighting power is consistent with what is shown on the approved lighting plans, demonstrating proposed watts are less than or equal to allowed watts.	
Plan Review	C405.5.2	Project	Group R-2 dwelling units have separate electrical meters.	
Plan Review	C406	Project	Plans, specifications, and/or calculations provide all information with which compliance can be determined for the additional energy efficiency package options.	
SYSTEM_SPECIFIC	C408.2.2.2	Mechanical	HVAC hydronic heating and cooling coils have means to balance and have pressure test connections.	
		3. To be cho	ecked by Inspector	
Insulation	C303.1	Envelope	Roof insulation installed per manufacturer's instructions. Blown or poured loose-fill insulation is installed only where the roof close is z=2 in 12	
Insulation	C303.1	Envelope	installed only where the roof slope is <=3 in 12. Building envelope insulation is labeled with R-value or insulation certificate providing R-value and other	
Insulation	C402.2.2	Envelope	relevant data. Insulation installed on a suspended ceiling having ceiling tiles is not being specified for roor/ceiling assemblies. Continuous insulation board installed in 2 or more layers with edge joints offset between layers.	
Insulation	C402.2.2	Envelope	Skylight curbs are insulated to the level of roofs with insulation above deck or R-5.	
Fenestration	C303.1.3	Envelope	Fenestration products rated in accordance with NFRC.	
Insulation	C303.2, C402.2.5	Envelope	Floor insulation installed per manufacturer's instructions. Cavity or structural slab insulation installed in permanent contact with underside of decking or structural slabs.	
Insulation	C303.2.1	Envelope	Exterior insulation protected against damage, sunlight, moisture, wind, landscaping and	
Insulation	C303.2.1	Envelope	equipment maintenance activities. Exterior insulation is protected from damage with a protective material. Verification for exposed foundation insulation may need to occur during Foundation Inspection.	
Insulation	C402.1.3	Envelope	Non-swinging opaque doors have R-4.75 insulation.	
Insulation	C104	Envelope	Installed above-grade wall insulation type and R-value consistent with insulation specifications reported in plans and COMcheck reports.	

Insulation	C104	Envelope	Installed slab-on-grade insulation type and R-value consistent with insulation specifications reported in	
Insulation	C104	Envelope	plans and COMcheck reports. Installed roof insulation type and R-value consistent with insulation specifications reported in plans and	
Air Lookowa	C402 F	Envolone	COMcheck reports. For some ceiling systems, verification may need to occur during Framing Inspection.	
Air Leakage	C402.5	Envelope	Building envelope contains a continuous air barrier that has been tested and deemed to limit air leakage <= 0.40 cfm/ft2.	
Air Leakage	C402.5.1	Envelope	The building envelope contains a continuous air barrier that is sealed in an approved manner and either constructed or tested in an approved manner. Air barrier penetrations are sealed in an	
Air Leakage	C402.5.1.1	Envelope	approved manner. All sources of air leakage in the building thermal envelope are sealed, caulked, gasketed, weather stripped or wrapped with moisture vapor-permeable wrapping material to minimize air	
Air Leakage	C402.5.1.2.1	Envelope	leakage. The building envelope contains a continuous air barrier that is sealed in an approved manner and material permeability <= 0.004 dfm/ft2. Air barrier penetrations are sealed in an approved manner.	
Air Leakage	C402.5.1.2.2	Envelope	The building envelope contains a continuous air barrier that is sealed in an approved manner and average assembly air leakage <= 0.04 cfm/ft2. Air barrier penetrations are sealed in an approved manner.	
Air Leakage	C402.5.2, C402.5.4	Envelope	Factory-built fenestration and doors are labeled as meeting air leakage requirements.	
Air Leakage	C402.5.5, C403.2.4.3	Envelope	Stair and elevator shaft vents have motorized dampers that automatically close. Refernece section C403.2.4.3 for operational details.	
Air Leakage	C402.5.6	Envelope	Weatherseals installed on all loading dock cargo door openings and provide direct contact along the	
Air Leakage	C402.5.6	Envelope	top and sides of vehicles parked in the doorway. Weatherseals installed on all loading dock cargo door openings and provide direct contact along the	
Air Leakage	C402.5.8	Envelope	top and sides of vehicles parked in the doorway. Recessed luminaires in thermal envelope to limit infiltration and be IC rated and labeled. Seal	
HVAC	C403.2.1	Mechanical	between interior finish and luminaire housing. HVAC systems and equipment design loads calculated in accordance with	
SYSTEM_SPECIFIC	C403.2.10	Mechanical	ANSI/ASHRAE/ACCA Standard 183 or by an approved equivalent computational procedure HVAC piping insulation insulated in accordance with Table C403.2.10. Insulation exposed to weather is protected from damage and is provided	
HVAC	C403.2.3	Mechanical	with shielding from solar radiation. HVAC equipment efficiency verified.	
SYSTEM_SPECIFIC	C403.2.3	Mechanical	PTAC and PTHP with sleeves 16 in. by 42 in. labeled for replacement only as per Footnote b to	
SYSTEM_SPECIFIC	C403.2.3	Mechanical	Table C403.2.3(3). Centrifugal fan open-circuit cooling towers having combined rated capacity >= 1100 gpm meets	
SYSTEM_SPECIFIC	C403.2.4.1	Mechanical	minimum efficiency requirement: >=38.2 gpm/hp. Heating and cooling to each zone is controlled by a thermostat control. Minimum one humidity control device per installed humidification/dehumidification	
SYSTEM_SPECIFIC	C403.2.4.1.1	Mechanical	system. Heat pump controls prevent supplemental electric resistance heat from coming on when not needed.	
HVAC	C403.2.4.1.2	Mechanical	Thermostatic controls have a 5 °F deadband.	
HVAC	C403.2.4.1.2	Mechanical	Thermostatic controls have a 5 °F deadband.	

HVAC	C403.2.4.1.3	Mechanical	Temperature controls have setpoint overlap	
HVAC	C403.2.4.2.1, C403.2.4.2.2	Mechanical	restrictions. Automatic Controls: Setback to 55°F (heat) and 85°F (cool); 7-day clock, 2-hour occupant override,	
SYSTEM_SPECIFIC	C403.2.4.2.3	Mechanical	10-hour backup Systems include optimum start controls.	
HVAC	C403.2.4.5, C403.2.4.6	Mechanical	Snow/ice melting system and freeze protection systems have sensors and controls configured to limit service for pavement temperature and outdoor temperature. future connection to controls.	
HVAC	C403.2.6.2	Mechanical	Enclosed parking garage ventilation has automatic contaminant detection and capacity to stage or modulate fans to 50% or less of design capacity.	
Air Leakage	C403.2.4.3	Mechanical	Outdoor air and exhaust systems have motorized dampers that automatically shut when not in use and meet maximum leakage rates. Check gravity dampers where allowed. Reference section	
HVAC	C403.2.9.1, C403.2.9.2	Mechanical	language for operational details. HVAC ducts and plenums insulated in accordance with C403.2.9.1 and constructed in accordance with C403.2.9.2, verification may need to occur during Foundation Inspection	
SYSTEM_SPECIFIC	C403.2.12.5.2	Mechanical	during Foundation Inspection. VAV fans have static pressure sensors located so controller setpoint <=1.2 w.c	
SYSTEM_SPECIFIC	C403.4.2.2	Mechanical	Two-pipe hydronic systems using a common distribution system have controls to allow a deadband >=15 °F, allow operation in one mode for at least 4 hrs before changeover, and have rest controls to limit heating and cooling supply temperature to <=30 °F.	
SYSTEM_SPECIFIC	C403.4.2.3.3	Mechanical	Two-position automatic valve interlocked to shut off water flow when hydronic heat pump with pumping system >10 hp is off.	
SYSTEM_SPECIFIC	C403.4.4.7	Mechanical	Parallel-flow fan-powered VAV air terminals have automatic controls configured to 1) turn off the terminal fan except when space heating is required or where required for ventilation, 2) turn on the terminal fan as the first stage of heating before the heating coil is activated, and 3) during heating for warmup or setback temperature control, either operate the terminal fan and heating coil without primary air or, reverse the terminal damper logic and provide heating from the central air handler by	
SYSTEM_SPECIFIC	C403.2.12.5.3	Mechanical	primary air. Systems with DDC of individual zones reporting to the central control panel configured to reset the static pressure setpoint based on zone requiring the most pressure. The DDC is capable of monitoring zone damper positions or have an alternative method of indicating the need for static pressure. See section for details.	
SYSTEM_SPECIFIC	C403.2.12.5.2	Mechanical	Static pressure sensors used to control VAV fans located such that the controller setpoint is <= 1.2 inches w.c Where this results in one or more sensors being located downstream of major duct splits, not less than one sensor located on each	
SYSTEM_SPECIFIC	C403.4.5	Mechanical	major branch. Condenser heat recovery system that can heat water to 85 °F or provide 60% of peak heat rejection is installed for preheating of service hot water.	
SYSTEM_SPECIFIC	C403.4.6	Mechanical	water. Hot gas bypass limited to: <=240 kBtu/h – 50% >240 kBtu/h – 25%	
SYSTEM_SPECIFIC	C404.3	Mechanical	Heat traps installed on supply and discharge piping of non-circulating systems.	
SYSTEM_SPECIFIC	C404.6.1	Mechanical	Controls are installed that limit the operation of a recirculation pump installed to maintain temperature of a storage tank. System return pipe is a dedicated return pipe or a cold water supply pipe.	

SYSTEM SDECIEIC	C404 6 1 C404 6 2	Mechanical	Automatic time switches installed to automatically	
SYSTEM_SPECIFIC	C404.6.1, C404.6.2	Mechanical	switch off the recirculating hot-water system or heat trace.	
SYSTEM_SPECIFIC	C404.9.1	Mechanical	Pool heaters are equipped with on/off switch and no continuously burning pilot light.	
SYSTEM_SPECIFIC	C404.9.2	Mechanical	Time switches are installed on all pool heaters and pumps.	
SYSTEM_SPECIFIC	C404.9.3	Mechanical	Vapor retardant pool covers are provided for heated pools and permanently installed spas.	
Controls	C405.2.1, C405.2.1.1	Interior Lighting	Occupancy sensors installed in classrooms/lecture/training rooms, conference/meeting/multipurpose rooms, copy/print rooms, lounges/breakrooms, enclosed offices, open plan office areas, restrooms, storage rooms, locker rooms, warehouse storage areas, and other spaces <= 300 sqft that are enclosed by floor-to-ceiling height partitions. Reference section language C405.2.1.2 for control function in warehouses and section C405.2.1.3 for open plan office spaces.	
Controls	C405.2.1.2	Interior Lighting	Occupancy sensors control function in warehouses: In warehouses, the lighting in aisleways and open areas is controlled with occupant sensors that automatically reduce lighting power by 50% or more when the areas are unoccupied. The occupant sensors control lighting in each aisleway independently and do not control lighting beyond the aisleway being controlled by the sensor.	
Controls	C405.2.1.3	Interior Lighting	Occupant sensor control function in open plan office areas: Occupant sensor controls in open office spaces >= 300 sq.ft. have controls 1) configured so that general lighting can be controlled separately in control zones with floor areas <= 600 sq.ft. within the space, 2) automatically turn off general lighting in all control zones within 20 minutes after all occupants have left the space, 3) are configured so that general lighting power in each control zone is reduced by >= 80% of the full zone general lighting power within 20 minutes of all occupants leaving that control zone, and 4) are configured such that any daylight responsive control will activate space general lighting or control zone general lighting only when occupancy for the same area is detected.	
Controls	C405.2.2, C405.2.2.1, C405.2.2.2	Interior Lighting	Each area not served by occupancy sensors (per C405.2.1) have time-switch controls and functions detailed in sections C405.2.2.1 and C405.2.2.2.	
Controls	C405.2.2.2	Interior Lighting	Spaces required to have light-reduction controls have a manual control that allows the occupant to reduce the connected lighting load in a reasonably uniform illumination pattern >= 50 percent.	
Controls	C405.2.3, C405.2.3.1, C405.2.3.2	Interior Lighting	Daylight zones provided with individual controls that control the lights independent of general area lighting. See code section C405.2.3 Daylight-responsive controls for applicable spaces, C405.2.3.1 Daylight responsive control function and section C405.2.3.2 Sidelit zone.	
Controls	C405.2.4	Interior Lighting	Separate lighting control devices for specific uses installed per approved lighting plans.	
Wattage	C405.2.4	Interior Lighting	Additional interior lighting power allowed for special functions per the approved lighting plans and is automatically controlled and separated from general lighting.	
Controls	C405.2.6	Exterior Lighting	Exterior lighting systems shall be provided with controls that comply with Sections C405.2.6.1 through C405.2.6.4. Decorative lighting systems shall comply with Sections C405.2.6.1, C405.2.6.2, and C405.2.6.4.	
Wattage	C405.3.1	Interior Lighting	Interior installed lamp and fixture lighting power is consistent with what is shown on the approved lighting plans, demonstrating proposed watts are less than or equal to allowed watts.	

Mandatory Additional Eff C406.4 Project Enhanced digital lighting controls efficiency package; Infecting lighting has bellowing onhanced lighting controls in accordance with Section C406.2 C406.6 Project Project Project C406.6 Project						
Mandatory Additional Eff C406.6 Project Dedicate outdoor air system efficiency package: Buildings with hydronic and/or multiples.zone HVAC systems are outpiped with an independent venillation system designed to provide >= 100-percent outdoor air to each individual occupied space, as specified by the MC. The venillation system designed to provide >= 100-percent outdoor air to each individual occupied space, as specified by the MC. The venillation system is capable of total energy recovery and the provide package and the provide package. Space and of definition of the provide package. One of the following SVH system characteristic research in the provided package. One of the following SVH system or enhancements must estilly 60 percent of buildings amount between the venillation of the package. One of the following SVH system enhancements must estilly 60 percent of buildings amount between the venillation of the package. One of the following SVH system enhancements must estilly 60 percent of buildings amount between two venillations of the package. One of the following SVH system enhancements must estilly 60 percent of buildings amount between two venillations of the package one of the following SVH system enhancements. One operated in the venillation of the package of the package of the buildings amount of the value requirements of the venillation of the package of	Mandatory Additional Eff	C406.4	Project	package: Interior lighting has following enhanced lighting controls in accordance with Section C405.2.2: Luminaires capable of continuous dimming and being addressed individually, <= 8 luminaires controlled in combination in a daylight zone, digital control system for fixtures, "Sequence of Operations" documentation, and functional testing		
Mandatory Additional Eff C406.7, C406.7.1 Project Enhanced Service Water Heal System efficiency package, One of the following SWH system enhancements must satisfy 60 percent of buildings annual hot water requirements, or 100 percent if the buildings equirements otherwise compiles with heat recovery per Section C403.9.5. Waste heat recovery (from SWH, process equipment, OR on-site renewable water-healing). HVAC C C408.2.2.1 Mechanical Air outlets and zone terminal devices have means for air balancing. HVAC Control systems have been tested to ensure proper operation, calibration and adjustment of controls. C408.2.1.1, C403.2.14.2 Mechanical Commercial refrigeration, refregerator, freezers, refrigerator-freezers and refrigeration equipment, defined in U.S. 10 CFR part 431 62, shall have an energy use in KMP(day) not greater than the values of Table C403.2.14.1 (1), when tested and rated in accordance with AHR) Slandard 1200. Walk-in cooler and walk-in freezer refrigeration systems, except for walk-in process cooling refrigeration systems, as defined in U.S. 10 CFR 431.302, shall mave an energy use in KMP(day) not greater than the values of Table C403.2.14.2(2) and C403.2.14.2(3). 4. To be checked by Inspector at Project Completion and Prior to Issuance of Certificate of Occupancy Post Construction C408.1.1 Mechanical Furnished O&M manuals for HVAC systems within class of the propers cooling refrigeration systems, and equipment to the building owner or designated representative Purnished O&M manuals for HVAC systems within Dispersion and Prior to Issuance of C408.2.5.3 Project Skylights in office, storage, automotive service, manufacturing, non-refrigerated warehouse, retail store, and distribution/sorting areh have a measured haze value > 90 days of system acceptance. Air Handler #1 - Zone 1 - Total Load Summary

Zone 1 Constant Volume - Proportion Air Handler Description:

Supply Air Fan: Draw-Thru with program estimated horsepower of 0.17 HP Fan Input: 0% motor and fan efficiency with 0 in. water across the fan

Sensible Heat Ratio: 0.86 --- This system occurs 1 time(s) in the building. ---

Air System Peak Time: 5pm in August.

Clg: 92° DB, 77° WB, 116.27 grains, Htg: 35° DB **Outdoor Conditions:**

Indoor Conditions: Clg: 75° DB, 50% RH, Htg: 72° DB

Because of the diversity in room, plenum and ventilation loads, the room sensible peak time in June at 5pm is different from the total system peak time, hence the air system CFM was computed using a room sensible load of 42,951.

Summer: Ventilation controls outside air, ----- Winter: Ventilation controls outside air.

Room Space sensible loss: 22,448 Btuh

Infiltration sensible loss: 0 CFM 0 Btuh Outside Air sensible loss: 14,095 Btuh 354 CFM

Supply Duct sensible loss: 0 Btuh Return Duct sensible loss: 0 Btuh Return Plenum sensible loss: 0 Btuh

Total System sensible loss: 36,543 Btuh

Heating Supply Air: 22,448 / (.996 X 1.08 X 15) = 1,400 CFM Winter Vent Outside Air (25.3% of supply) = 354 CFM

Room space sensible gain: 42.421 Btuh Infiltration sensible gain: 0 Btuh Draw-thru fan sensible gain: 429 Btuh Supply duct sensible gain: 0 Btuh Reserve sensible gain: 0 Btuh

Total sensible gain on supply side of coil: 42,851 Btuh

Cooling Supply Air: 43,380 / (.996 X 1.1 X 22) = 1.799 CFM Summer Vent Outside Air (19.7% of supply) = 354 CFM

Return duct sensible gain: 0 Btuh Return plenum sensible gain:
Outside air sensible gain: 0 Btuh

6.596 Btuh 354 CFM

Blow-thru fan sensible gain: 0 Btuh

Total sensible gain on return side of coil: 6.596 Btuh Total sensible gain on air handling system: 49,447 Btuh

Room space latent gain: 6.944 Btuh Infiltration latent gain: 0 Btuh Outside air latent gain: 12.365 Btuh

Total latent gain on air handling system: 19,309 Btuh Total system sensible and latent gain: 68,755 Btuh

Check Figures

Total Air Handler Supply Air (based on a 22° TD): 1.799 CFM Total Air Handler Vent. Air (19.68% of Supply): 354 CFM

Total Conditioned Air Space: 2,265 Sq.ft Supply Air Per Unit Area: 0.7943 CFM/Sq.ft Area Per Cooling Capacity: 395.3 Sa.ft/Ton Cooling Capacity Per Area: 0.0025 Tons/Sq.ft **Heating Capacity Per Area:** 16.13 Btuh/Sq.ft

Total Heating Required With Outside Air: 36,543 Btuh Total Cooling Required With Outside Air: 5.73 Tons

Air Handler #2 - Zone 2 - Total Load Summary

Air Handler Description: Zone 2 Constant Volume - Proportion

Supply Air Fan: Draw-Thru with program estimated horsepower of 0.01 HP Fan Input: 0% motor and fan efficiency with 0 in. water across the fan

Sensible Heat Ratio: 0.84 --- This system occurs 1 time(s) in the building. ---

Air System Peak Time: 2pm in June.

Outdoor Conditions: Clg: 93° DB, 75° WB, 101.57 grains, Htg: 35° DB

Indoor Conditions: Clg: 75° DB, 50% RH, Htg: 72° DB

Summer: Exhaust controls outside air, ----- Winter: Exhaust controls outside air.

Room Space sensible loss: 1,103 Btuh

Infiltration sensible loss: 0 Btuh 0 CFM Outside Air sensible loss: 0 Btuh 0 CFM

Supply Duct sensible loss: 0 Btuh
Return Duct sensible loss: 0 Btuh
Return Plenum sensible loss: 0 Btuh

Total System sensible loss: 1,103 Btuh

Heating Supply Air: 1,103 / (.996 X 1.08 X 23) = 45 CFM Winter Vent Outside Air (0.0% of supply) = 0 CFM

Room space sensible gain:

Infiltration sensible gain:

Draw-thru fan sensible gain:

Supply duct sensible gain:
