PERMIT NUMBER**POCKET PENETROMETER TEST**

The pocket penetrometer tests are rounded down to
or check here to decimal 1000 lb. soil
without testing. psf

x1000**x****x****POCKET PENETROMETER TESTING METHOD**

1. Test the perimeter of the home at 5 locations.
2. Take the reading at the depth of the footer.
3. Using 500 lb. increments, take the lowest.
Radius and round down to that increment.

x1000**x****x****TORQUE PROBE TEST**

The results of the torque probe test is
here if you are decimal 5 anchors without testing
showing 275 lbf. points or less will require 5 foot anchors.

Note:

A stay approved lateral arm system is being used and 4 ft.
anchors are allowed at all cantilever locations. I understand 5 ft.
reading is 275 or less and where the mobile home manufacturer may
requires anchors with 4000 lbf holding capacity.

Roof:
Type Fastener: **1/4" x 5"**
Length: **6"**
Spacing: **24"**
Length: **6"**
Spacing: **24"**
For used homes: a min. 30 degree gr. wide, galvanized metal step
will be centered over the peak of the roof and fastened with 5#N,
rolling nails at 27° on center on both sides of the chimney.

I understand a properly installed chimney is a requirement of all new and used
homes and that combustion, moist, masonry and brick, masonry walls are
a result of a poorly insulated or too sealed being installed. I understand a ship
of tape will not serve as a seal.
