POCKET PENETROMETER TEST

The pocket penetrometer tests are rounded down to 1500 psf or check here to declare 1000 lb. soil without testing.

x 1600 x 1700 x 1700

POCKET PENETROMETER TESTING METHOD

1. Test the perimeter of the home at 6 locations.
2. Take the reading at the depth of the footer.
3. Using 500 lb. increments, take the lowest reading and round down to that increment.

x 1700 x 1700 x 1700

TORQUE PROBE TEST

The results of the torque probe test is 295 inch pounds or check here if you are declaring 5' anchors without testing A test showing 275 inch pounds or less will require 5 foot anchors.

Note: A state approved lateral arm system is being used and 4 ft. anchors are allowed at the sidewall locations. I understand 5 ft. anchors are required at all centerline tie points where the torque test reading is 275 or less and where the mobile home manufacturer may require anchors with 4000 lb holding capacity.

Contractor/Permit Subcontractor Form 3/22

Columbia County Building and Zoning Department
135 NE Hernando St
Lake City, Florida 32055

Subject: Parcel Number 16-4S-16-03031-000
862 SW Legion Drive

Dear Sir,

The subject parcel is not shown on Suwannee River Water Management District effective flood information report as a parcel subject to flooding. According to the U. S. C. & G. topographic map the subject parcel has elevation ranging from 115' at the north end to 110' on the south end and S.W. Legion Drive having an elevation of 115'.

It is my understanding the property owner intends to place a double wide mobile home on the subject parcel. Normally mobile homes are placed on 16 inches of concrete blocks on the low end of the home, therefore the floor elevation would be approximately 2 ½ to 3 feet above natural ground. It is my opinion that placement of the floor elevation 2 ½ to 3 feet above natural ground would be adequate to prevent flooding and therefore not subject to county requirement for it to be 1 foot above the closet public roadway.
