MIGMORANDUM

SUBJECT:

Lateral Arm Stabilizer Systems

To ensure consumer protection and to ensure that minimum standards are met in the installation of Lateral Arm Stabilizing Systems, it is necessary for us to create uniform installation standards for these systems. A secondary benefit of uniform standards will be the clarification of installation procedures for installers and for county and city inspectors performing field oversight.

Effective immediately all Florida lateral arm stabilizing instructions will include the following prescriptive number of systems:

> Four (4) systems up to 52 feet Six (6) systems from 52 to 80 feet

Five (5) 12 pitch roofs will require a minimum of the following number of lateral arm stabilizing systems, unless a greater number is specified by your engineering:

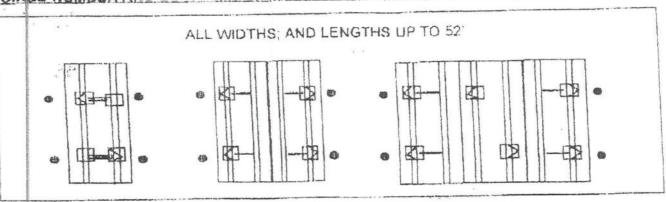

> Six (6) systems up to 52 feet Eight (8) systems from 52 to 80 feet

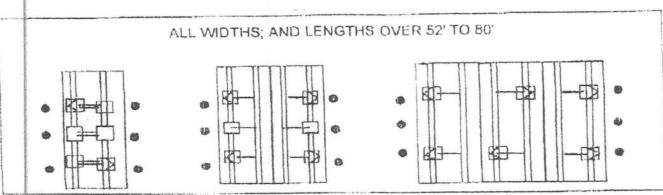

Your instructions should contain the following three (3) notes:

- Note: 1) The use of this system requires sidewall vertical lies at no greater than 5'4" on center and allows for the use of 4' anchors.
- Note. 2) Centerline anchors to be sized according to soil torque condition. Any manufacturer's specifications for sidewall anchor loads in excess of 4,000 lbs. require a 5' anchor.
- Note: 3) Each system is required to have a frame tie and stabilizer attached at each lateral arm stabilizing location.
