TABLE 1. TYPICAL WALL TABLE

The table presents the minimum load-carrying capacity of a wall in the bending and twist of the wall. The table is based on the following assumptions: the wall is made of concrete with a compressive strength of 4,000 psi; the wall is 12 in. thick; the wall is supported by a rigid foundation; the wall is subjected to a uniform load of 100 psf; the wall is subjected to a moment of 100 ft-lb; the wall is subjected to a twist of 100 ft-lb; the wall is subjected to a combination of bending, twist, and shear.

STORY HEIGHT (ft)	MINIMUM WALL THICKNESS (in.)	MINIMUM WALL AREA (sq ft)	MINIMUM WALL PERIMETER (ft)	MINIMUM WALL VOLUME (cu ft)	MINIMUM WALL WEIGHT (lb)	MINIMUM WALL STRENGTH (lb)
