Emaleigh

The proposed vertical lean-to supports fall within the existing wall on the existing slab.

There is 8" block and 18" of existing slab north of the proposed supports.

The overhang is six inches and can be trimmed to ensure no encroachment on the 25' buffer.

Thanks

**I just spoke with zoning and they would like a written statement from you that states the structural part of the lean to will not meet the edge of the existing slab and will meet the minimum setback of 25'. ☺**
