Finish Floor Elevation Requirement\Exemption

Client: Tommy & Arica Bulock
Contractor: Simque Construction
Description: Bulock Residence (Building Permit #000030028)
Parcel ID#: 01-5S-16-03401-000

Foundation Requirements:

For protection against water damage during the 100 year storm event, the minimum finish floor elevation of the proposed structure shall be 12 inches above the existing ground at any point along the perimeter of the proposed structure. In no case shall the finish floor elevation be less than 77.00 feet above sea level for any structures on this property.

The ground around the proposed structure shall be graded such as to convey all stormwater runoff away from the proposed structure.

The USGS elevation survey (quad map, 5 foot contours) shows the nearby ground elevations to be about 87 feet, thus being approximately 11 feet above the estimated flood elevation of (not greater than) 76.00 feet.

Please note that this certification letter also serves as a request for exemption from the elevation requirements for areas where no base flood data has been provided. This is because the above elevations are based on an engineering analysis of flood hazards of the structure's current location, approximately +/-200 feet east of the adjacent graded road.
