OWNER'S MANUAL

INSTALLATION, OPERATION, & PARTS

To prevent potential injury and to avoid unnecessary service calls, read this manual carefully and completely.

SAVE THIS INSTRUCTION MANUAL

Use of appointed replacement parts voids warranty.

ATTENTION INSTALLER - THIS MANUAL CONTAINS IMPORTANT INFORMATION ABOUT THE INSTALLATION, OPERATION, AND SAFE USE OF THIS PUMP THAT MUST BE FURNISHED TO THE END USER OF THIS PRODUCT. FAILURE TO READ AND FOLLOW ALL INSTRUCTIONS COULD RESULT IN SERIOUS INJURY.

HAYWARD®

Underwater Lighting Fixtures

ASTROLITE™ SP0580 SERIES
DURALITE™ SP0570N SERIES
ASTROLITE II™ SP0590 SERIES

OWNER'S GUIDE

INSTALLATION AND OPERATING INSTRUCTIONS

GENERAL INFORMATION

The underwater lighting fixture you have purchased is UL Listed under file number E39338 and must be used with an appropriate Hayward UL Listed fixture housing (niche). Installation of light and niche must be in accordance with Article 680 of the National Electrical Code (NEC) and any applicable local codes. If non-metallic conduit is used a # 8 AWG grounding conductor must be run through conduit and connected to grounding connector on inside of niche. This connection must be encapsulated using a listed potting compound in accordance with NEC Article 680.23B2 (3M Inc. Scotch Cast Wet Niche Potting Compound No. 2135 (UL File E130394 or equivalent) The integral external connection is for the # 8 AWG bonding conductor also required by the NEC.

Fixtures with an "L" suffix are equipped with an Automatic Thermal Switch (ATS) to protect the light fixture if it is operated while not submerged in water. If operating temperatures exceed the normal design temperatures expected with standard submerged installations, the ATS will activate and shut off the fixture. When the fixture has cooled the ATS will reset and the light will go on again. Excessive water temperature or a defective bulb may cause the light fixture to continuously cycles on and off. This condition should be corrected as soon as possible.

Le projecteur que vous venez d'acheter est conforme avec UL sous le dossier numero E39338 et doit être employé avec la correcte niche Hayward. L'installation du projecteur et de la niche doit être en concordance avec l'article 680 du code électrique national (NEC) et/ou avec le code électrique local. Si la gaine utilisée est non métallique, un conducteur de mise à la terre de 8AWG ou XX mm2 doit être inséré dans la gaine et doit être connecté de la mise à la terre à l'intérieur de la niche. La connection doit être recouverte par une pâte epoxy d'une épaisseur imposée par le code électrique local ou le code NEC Article 680.23B2 (3M Inc. Scotch Cast Wet Niche Potting Compound N° 2135) La connection extérieure est pour le conducteur de la mise à la terre de 8AWG ou XX mm2 est aussi imposé par le NEC.

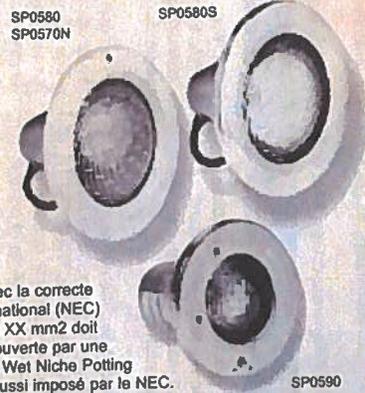

Projecteurs avec le suffixe "L" sont des projecteurs muni d'un interrupteur thermique automatique qui protège le projecteur si celui-ci n'est pas immergé lors de la mise sous courant. Si la température dépasse la température normale acceptable pour les équipements immergés, l'interrupteur thermique automatique sera activé et coupera le courant du projecteur. Aussitôt que le projecteur est refroidi l'interrupteur thermique automatique se réenclenche et permet le courant de circuler à nouveau dans le projecteur. Haute température de l'eau ou d'une lampe (ampoule) défectueuse peut causer au projecteur de s'éteindre et de se rallumer. Ce genre de problème doit être fixé au plus vite possible.

El accesorio para uso bajo de agua que usted ha adquirido es UL regulado bajo el numero de archivo E39338, y debe de ser usado de acuerdo con el nicho adecuado Hayward y que es UL regulado, la instalacion del nicho y la luz debe de estar en concordancia con el articulo 680 de el codigo electrico nacional (NEC), y los codigos locales aplicables. Si un conducto no-metalico es usado, un cable 8AWG polo a tierra debe de ser corrido a traves del conducto y conectado al nicho interiormente. Esta conexión debe de estar enclaustrada utilizando un recipiente debidamente apropiado de acuerdo a al articulo NEC articulo 680.23B2 (3M Inc Scotch Componente para Nicho Humedo No 2135)archivo UL E130394 o equivalente). El conector integral externo es para un conductor de cable #8 AWG conductor tambien requerido por la NEC.

Accesorios con sufixo "L" están equipados con un Interruptor Termico Automatico, para proteger la luz del accesorio, cuando este no este sumergido en agua. Si las temperaturas de operacion, sobrepasan las temperaturas de diseño, con instalaciones sumergidas, el ATS se activara y apagara el accesorio. Cuando el accesorio se ha enfriado, el ATS, volvera a activarse y el reflector volvera a encenderse. Exceso de temperatura o un bulbo defectuoso, pueden causar que el accesorio de luz haga ciclos de apagado y encendido. Esta condicion debe de ser corregido lo mas pronto posible.

IMPORTANT SAFETY INSTRUCTIONS IMPORTANTE INSTRUCCIONES DE SEGURITE INSTRUCCIONES IMPORTANTES DE SEGURIDAD.

When installing and using this electrical equipment, basic safety precautions should always be followed, including the following: Failure to follow instructions may result in injury.

READ AND FOLLOW ALL INSTRUCTIONS

1. Warning - To reduce risk of injury, do not permit children to use this product unless they are closely supervised at all times.
2. Caution - This swimming pool / spa light is U.L. Listed for permanently installed pools or spas. It is not listed for storage pools or spas. Permanently installed pools are those constructed in or partially in the ground and all others capable of holding water in a depth greater than 42 in. (1.07m). Storage pools are those constructed on or above the ground and capable of holding water to a maximum depth of 42 in. (1.07 m).
3. This Light Fixture must be installed by qualified personnel in compliance with the National Electrical Code (NEC) and any applicable local codes.
4. Disconnect Electrical Power before installing, relamping or servicing this equipment.
5. Improper installation may result in death or serious injury to bathers or service personnel or others by way of electrical shock. Read and follow the instructions below.

Lors de l'installation et de l'emploi d'équipement électrique, des precautions de sécurité de base doivent être suivies, ignorer les instructions suivantes peut entraîner des dommages corporelles

LISEZ ET SUIVEZ LES INSTRUCCIONES SUIVANTES

1. Attention: Pour éviter tout risque de damage corporelles, ne permettre pas aux enfants d'utiliser cet équipement sauf si ils sont sous la supervision d'un adulte.
2. Attention: Ce projecteur et niche sont UL conforme pour l'installation dans une piscine ou spa permanents. Ce n'est pas conforme pour des piscines ou spas démontables. Piscines ou spas permanents sont ceux qui sont installés partiellement ou complètement dans le sol et capable de contenir l'eau à une profondeur de 42 in. (1m07). Piscines ou spa démontables sont construites hors-sol et sont capable de retenir de l'eau à une profondeur maximum de 42 in. (1m07).
3. Le projecteur doit être installé par une personne qualifiée en accord avec le Code Electrique National (NEC) et appliquée par le code local.
4. Couper et déconnecter le courant avant l'installation, le remplacement de la lampe ou pour toute réparation de cet équipement.
5. Une mauvaise installation peut causer la mort, damage corporelles au baigneurs ou personnels d'entretien ou tout autres personnes par électrocution. Lisez et suivez les instructions qui suivent.

Cuando e instale este equipo electrico, precauciones basicas de seguridad deberan de seguirse siempre. Fallo en seguir esta instrucciones podrian resultar en danos personales.

LEA Y SIGA LAS SIGUIENTES INSTRUCCIONES

1. Advertencia- Para reducir el riesgo de dano, no permita que niños jueguen con este accesorio, a menos que esto este supervisado de cerca.
2. Precaucion- Esta luz para piscina o spa, esta regida bajo codigos UL, para ser instalada permanentemente. No es para piscina o spa que se pueden almacenar. Piscinas o spa permanentes son aquellas construidas bajo nivel de piso, y que mantienen agua en profundidades mayores a 42 pulgadas(1.07 mts). Piscinas o spas de almacenaje, son aquellas contruidas arriba del nivel de piso y capaces de mantener agua en profundidades mayores de 42 pulgadas(1.07 mts).
3. Este accesorio de luz debe de ser instalado por personal capacitado en cumplimiento con codigos NEC y cualquier codigo local aplicable.
4. Desconecte la fuente electrica de poder antes de instalar este accesorio, cambio de lampara, o servicio. Lea y siga las instrucciones abajo indicadas.
5. Instalacion impropia podria resultar en la muerte o serio dano a bafista, o personal de servicio debido a choque electrico. Cuando instale y use este equipo, precauciones basicas deben de ser seguidas, falla en hacer esto podria resultar en accidentes.

NOTE: For installation of Hayward PVD or stainless steel Fixture Mounting Bracket use the standard instructions provided with Fixture Mounting Bracket.

1. The light fixture must be installed to the wall or ceiling only by the use of the mounting bracket. Do not attempt to install the fixture directly to the wall or ceiling. The fixture must be installed in the same way as the mounting bracket. The mounting bracket must be installed to the wall or ceiling first. The mounting bracket must be installed to the wall or ceiling first. The mounting bracket must be installed to the wall or ceiling first.

2. Secure the 3-wire power cable to the mounting bracket. The mounting bracket must be installed to the wall or ceiling first. The mounting bracket must be installed to the wall or ceiling first. The mounting bracket must be installed to the wall or ceiling first.

3. Route the 3-wire power cable through the mounting bracket. The mounting bracket must be installed to the wall or ceiling first. The mounting bracket must be installed to the wall or ceiling first. The mounting bracket must be installed to the wall or ceiling first.

4a. (SP0570N) Before any light fixture can be installed to the wall or ceiling, the mounting bracket must be installed to the wall or ceiling first. The mounting bracket must be installed to the wall or ceiling first. The mounting bracket must be installed to the wall or ceiling first.

4b. Secure the 3-wire power cable to the mounting bracket. The mounting bracket must be installed to the wall or ceiling first. The mounting bracket must be installed to the wall or ceiling first. The mounting bracket must be installed to the wall or ceiling first.

4c. (SP0570N) Secure the 3-wire power cable to the mounting bracket. The mounting bracket must be installed to the wall or ceiling first. The mounting bracket must be installed to the wall or ceiling first. The mounting bracket must be installed to the wall or ceiling first.

4d. (SP0570N) Secure the 3-wire power cable to the mounting bracket. The mounting bracket must be installed to the wall or ceiling first. The mounting bracket must be installed to the wall or ceiling first. The mounting bracket must be installed to the wall or ceiling first.

4e. (SP0570N) Secure the 3-wire power cable to the mounting bracket. The mounting bracket must be installed to the wall or ceiling first. The mounting bracket must be installed to the wall or ceiling first. The mounting bracket must be installed to the wall or ceiling first.

4f. (SP0570N) Secure the 3-wire power cable to the mounting bracket. The mounting bracket must be installed to the wall or ceiling first. The mounting bracket must be installed to the wall or ceiling first. The mounting bracket must be installed to the wall or ceiling first.

4g. (SP0570N) Secure the 3-wire power cable to the mounting bracket. The mounting bracket must be installed to the wall or ceiling first. The mounting bracket must be installed to the wall or ceiling first. The mounting bracket must be installed to the wall or ceiling first.

4h. (SP0570N) Secure the 3-wire power cable to the mounting bracket. The mounting bracket must be installed to the wall or ceiling first. The mounting bracket must be installed to the wall or ceiling first. The mounting bracket must be installed to the wall or ceiling first.

5. Connect the light fixture power to the power supply. The power supply must be installed to the wall or ceiling first. The power supply must be installed to the wall or ceiling first. The power supply must be installed to the wall or ceiling first.

NOTE: Pour l'installation des modèles PVD ou en acier inoxydable d'Hayward, utiliser les instructions standard fournies avec le support de montage.

1. Le projecteur doit être installé au mur ou au plafond uniquement à l'aide du support de montage. Ne pas tenter d'installer le projecteur directement au mur ou au plafond. Le projecteur doit être installé de la même manière que le support de montage. Le support de montage doit être installé au mur ou au plafond en premier. Le support de montage doit être installé au mur ou au plafond en premier.

2. Fixer le câble électrique à 3 conducteurs au support de montage. Le support de montage doit être installé au mur ou au plafond en premier. Le support de montage doit être installé au mur ou au plafond en premier. Le support de montage doit être installé au mur ou au plafond en premier.

3. Faire passer le câble électrique à 3 conducteurs à travers le support de montage. Le support de montage doit être installé au mur ou au plafond en premier. Le support de montage doit être installé au mur ou au plafond en premier. Le support de montage doit être installé au mur ou au plafond en premier.

4. Avant de fixer le projecteur à la paroi ou au plafond, il faut d'abord installer le support de montage. Le support de montage doit être installé au mur ou au plafond en premier. Le support de montage doit être installé au mur ou au plafond en premier. Le support de montage doit être installé au mur ou au plafond en premier.

4a. Avant de fixer le projecteur à la paroi ou au plafond, il faut d'abord installer le support de montage. Le support de montage doit être installé au mur ou au plafond en premier. Le support de montage doit être installé au mur ou au plafond en premier. Le support de montage doit être installé au mur ou au plafond en premier.

4b. Fixer le câble électrique à 3 conducteurs au support de montage. Le support de montage doit être installé au mur ou au plafond en premier. Le support de montage doit être installé au mur ou au plafond en premier. Le support de montage doit être installé au mur ou au plafond en premier.

4c. (SP0570N) Fixer le câble électrique à 3 conducteurs au support de montage. Le support de montage doit être installé au mur ou au plafond en premier. Le support de montage doit être installé au mur ou au plafond en premier. Le support de montage doit être installé au mur ou au plafond en premier.

4d. (SP0570N) Fixer le câble électrique à 3 conducteurs au support de montage. Le support de montage doit être installé au mur ou au plafond en premier. Le support de montage doit être installé au mur ou au plafond en premier. Le support de montage doit être installé au mur ou au plafond en premier.

4e. (SP0570N) Fixer le câble électrique à 3 conducteurs au support de montage. Le support de montage doit être installé au mur ou au plafond en premier. Le support de montage doit être installé au mur ou au plafond en premier. Le support de montage doit être installé au mur ou au plafond en premier.

4f. (SP0570N) Fixer le câble électrique à 3 conducteurs au support de montage. Le support de montage doit être installé au mur ou au plafond en premier. Le support de montage doit être installé au mur ou au plafond en premier. Le support de montage doit être installé au mur ou au plafond en premier.

4g. (SP0570N) Fixer le câble électrique à 3 conducteurs au support de montage. Le support de montage doit être installé au mur ou au plafond en premier. Le support de montage doit être installé au mur ou au plafond en premier. Le support de montage doit être installé au mur ou au plafond en premier.

4h. (SP0570N) Fixer le câble électrique à 3 conducteurs au support de montage. Le support de montage doit être installé au mur ou au plafond en premier. Le support de montage doit être installé au mur ou au plafond en premier. Le support de montage doit être installé au mur ou au plafond en premier.

NOTA: Para la instalación de accesorios de PVC o en acero inoxidable (PVD), usar las instrucciones estándar que vienen con el accesorio.

1. El proyector debe ser instalado en la pared o en el techo únicamente a través del soporte de montaje. No intentar instalar el proyector directamente en la pared o en el techo. El proyector debe ser instalado de la misma manera que el soporte de montaje. El soporte de montaje debe ser instalado en la pared o en el techo primero. El soporte de montaje debe ser instalado en la pared o en el techo primero.

2. Fijar el cable eléctrico de 3 conductores al soporte de montaje. El soporte de montaje debe ser instalado en la pared o en el techo primero. El soporte de montaje debe ser instalado en la pared o en el techo primero. El soporte de montaje debe ser instalado en la pared o en el techo primero.

3. Pasar el cable eléctrico de 3 conductores a través del soporte de montaje. El soporte de montaje debe ser instalado en la pared o en el techo primero. El soporte de montaje debe ser instalado en la pared o en el techo primero. El soporte de montaje debe ser instalado en la pared o en el techo primero.

4. Antes de fijar el proyector a la pared o al techo, primero se debe instalar el soporte de montaje. El soporte de montaje debe ser instalado en la pared o en el techo primero. El soporte de montaje debe ser instalado en la pared o en el techo primero. El soporte de montaje debe ser instalado en la pared o en el techo primero.

4a. Antes de fijar el proyector a la pared o al techo, primero se debe instalar el soporte de montaje. El soporte de montaje debe ser instalado en la pared o en el techo primero. El soporte de montaje debe ser instalado en la pared o en el techo primero. El soporte de montaje debe ser instalado en la pared o en el techo primero.

4b. Fijar el cable eléctrico de 3 conductores al soporte de montaje. El soporte de montaje debe ser instalado en la pared o en el techo primero. El soporte de montaje debe ser instalado en la pared o en el techo primero. El soporte de montaje debe ser instalado en la pared o en el techo primero.

4c. (SP0570N) Fijar el cable eléctrico de 3 conductores al soporte de montaje. El soporte de montaje debe ser instalado en la pared o en el techo primero. El soporte de montaje debe ser instalado en la pared o en el techo primero. El soporte de montaje debe ser instalado en la pared o en el techo primero.

4d. (SP0570N) Fijar el cable eléctrico de 3 conductores al soporte de montaje. El soporte de montaje debe ser instalado en la pared o en el techo primero. El soporte de montaje debe ser instalado en la pared o en el techo primero. El soporte de montaje debe ser instalado en la pared o en el techo primero.

4e. (SP0570N) Fijar el cable eléctrico de 3 conductores al soporte de montaje. El soporte de montaje debe ser instalado en la pared o en el techo primero. El soporte de montaje debe ser instalado en la pared o en el techo primero. El soporte de montaje debe ser instalado en la pared o en el techo primero.

4f. (SP0570N) Fijar el cable eléctrico de 3 conductores al soporte de montaje. El soporte de montaje debe ser instalado en la pared o en el techo primero. El soporte de montaje debe ser instalado en la pared o en el techo primero. El soporte de montaje debe ser instalado en la pared o en el techo primero.

4g. (SP0570N) Fijar el cable eléctrico de 3 conductores al soporte de montaje. El soporte de montaje debe ser instalado en la pared o en el techo primero. El soporte de montaje debe ser instalado en la pared o en el techo primero. El soporte de montaje debe ser instalado en la pared o en el techo primero.

4h. (SP0570N) Fijar el cable eléctrico de 3 conductores al soporte de montaje. El soporte de montaje debe ser instalado en la pared o en el techo primero. El soporte de montaje debe ser instalado en la pared o en el techo primero. El soporte de montaje debe ser instalado en la pared o en el techo primero.

DISASSEMBLY OF FIXTURE SP0570N SP0580(S) SP0590 SERIES

Only qualified service personnel should perform re-wiring and servicing of fixtures. Note to servicepersons: Loosen clamp retaining screw only far enough to free range of face rim and lens from clamp assembly. When reassembling an SP0570N or SP0590 series light fixture, be sure that the mounting screw in the stainless steel face rim is aligned with the "top" marking on the reflector assembly. In both instances, be sure that the lens is properly secured (locking "top" marking as a reference). We recommend that a new face gasket (part no. SP059802 or SP059903) be installed when re-wiring the fixture. All the lens gasket to the lens being sure that the side marked "top" is aligned with the top of the reflector. On Model SP059802 or SP059903, reflector must be in place before installing gasket and lens. CAUTION: Do not allow skin to contact halogen bulbs or the lens when shorting bulb lead. If contact occurs wipe bulb with glass cleaner and sock cloth. Move any bulb or lens wiring assembly to safe when installing bulb.

DEMONTAGE DU PROJECTEUR SP0570N SP0580(S) SP0590

Seulement un personnel qualifié peut changer la lampe et réparer le projecteur. Note aux techniciens: Dévisser la vis de fixation de la gamme de face et de la lentille du projecteur uniquement assez pour libérer la gamme de face et la lentille du projecteur. Lors du réassemblage d'un projecteur de la série SP0570N ou SP0590, assurez-vous que la vis de montage de la face est alignée avec la marque "top" sur l'ensemble réflecteur. Dans les deux cas, assurez-vous que la lentille est correctement fixée (la marque "top" servant de référence). Nous recommandons d'installer un nouveau joint de face (part no. SP059802 ou SP059903) lors du câblage du projecteur. Installez le joint de face sur la lentille en veillant à ce que la face marquée "top" soit alignée avec le haut de l'ensemble réflecteur. Sur le modèle SP059802 ou SP059903, le réflecteur doit être en place avant d'installer le joint de face et la lentille. ATTENTION: Ne pas laisser la peau entrer en contact avec les ampoules à halogène ou la lentille. Si un contact a lieu, essuyez l'ampoule avec un chiffon doux et un produit nettoyant pour la vitre.

DESARMADO DE EL ACCESORIO SP0570N SP0580(S) SP0590 SERIES

Sólo personal calificado debe proceder a instalar o reparar el accesorio. Nota al personal de servicio: Afloje el tornillo de retención de la gama de face y la lente del accesorio únicamente lo suficiente para liberar la gama de face y la lente del accesorio. Cuando se re-ensambla un accesorio de la serie SP0570N o SP0590, asegurese de que la vis de montaje de la cara del accesorio esté alineada con la marca "top" que aparece en el reflector. En ambos casos, asegurese de que la lente esté correctamente fijada (utilizando la marca "top" como referencia). Recomendamos que un nuevo sello de la cara se instale cuando se cablea el accesorio. Instale el sello de la cara sobre la lente asegurándose de que la cara marcada "top" esté alineada con la parte superior del reflector. En el modelo SP059802 o SP059903, el reflector debe estar en su lugar antes de instalar el sello de la cara y la lente. PRECAUCIÓN: No permita que la piel entre en contacto con las bombillas halógenas, o que pueda tocar la cara del tubo de la bombilla. Si ocurre contacto, limpie con un paño suave y un limpiacristales. Mueva cualquier sistema de cables de la bombilla o lente al seguro cuando instale la bombilla.

Hayward SP0570N SP0580 and SP0590 Series Light Fixtures are UL Listed for Use with Hayward Fixture Mountings (Mikes) only. See Chart below.

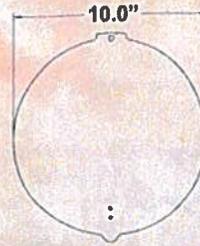

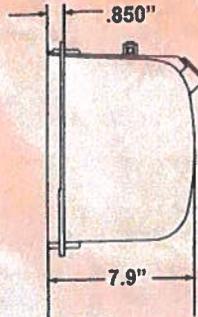

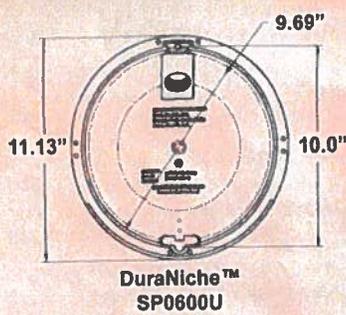

Hayward SP0570N Y SP-0590 Accesorios de estas series están listados bajo normas UL para uso con instalaciones Hayward (Mikes) solamente. Ver la tabla en la parte inferior.

Model No.	Volts AC	Watts	Nota
SP0570N	12	100	SP0555 2000U/SP0567 2007 607(U)
SP0571N	12	300	SP0555 2000U/SP0567 2007 607(U)

SP0593HSL	120	100	SP0555 2000U/SP0567 2007 607(U)
SP0592HSL	120	250	SP0555 2000U/SP0567 2007 607(U)

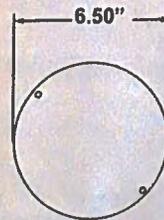

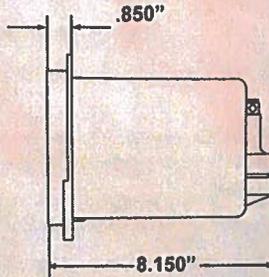

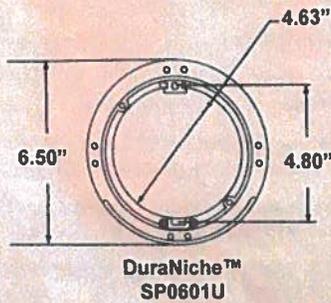

* NOTE: SP0555, 500, and 507 are no longer available.
 * NOTE: SP0555, 500, and 507 no longer plus disponible.
 * NOTA: SP0555, 500 Y 507 no mas disponibles.

Light Fixtures may be installed up to (150) feet although Hayward recommends that cord lengths for (12) volt fixtures not exceed (50) feet.
 Les projecteurs peuvent être installés au maximum de 76m2 ou 25 pieds à la fois jusqu'à 45m72, cependant Hayward recommande que les câbles électriques pour les projecteurs de 12 volts n'excèdent pas 15m24 ou 50 pieds.
 Los accesorios de luz deben de ser instalados en incrementos de (25) pies hasta (150) pies pero Hayward recomienda que el largo de las cordones for accesorios de (12) voltaje no exceda (50) pies.

DuraNiche™ SERIES

UNDERWATER LIGHTING FIXTURE HOUSINGS

MODEL NO. SP0600U-FOR CONCRETE POOLS
MODEL NO. SP0601U-FOR CONCRETE POOL/SPA
MODEL NO. SP0607U- FOR VINYL/FIBERGLASS POOLS

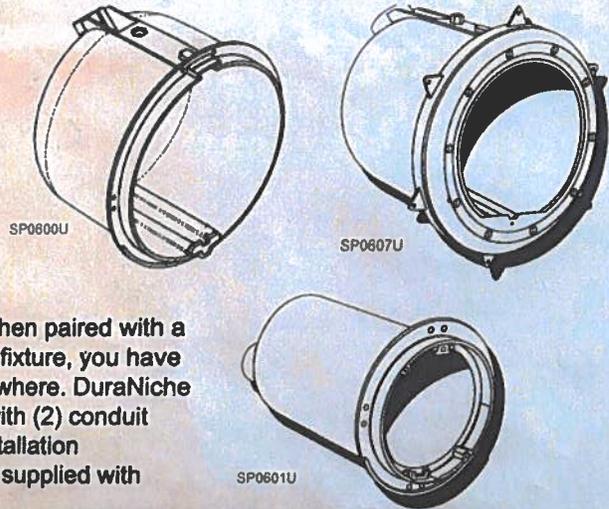

INSTALLATION INSTRUCTIONS

Unlike metallic niches, DuraNiche™ niches are injection-molded of PVC for superior performance, non-corrosive durability and plumbing versatility - plus the lowest installed cost.

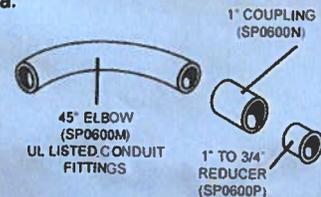

The ability to accept PVC over expensive metal conduit enables DuraNiche™ to offer true bottom line savings in materials, as well as time to install

DuraNiche™ comes in three models for concrete/gunite pools, vinyl/ fiberglass pools, or for concrete/gunite spas. When paired with a Hayward AstroLite™ AstroLite II™ or ColorLogic® LED light fixture, you have the best quality and value in a lighting system available anywhere. DuraNiche Models, SP0600U, SP0601U and SP0607U are furnished with (2) conduit fittings (reducer and elbow/coupling) to allow for specific installation requirements. Models SP0600IMG and SP0601IMG are not supplied with conduit fittings but installation is otherwise identical

IMPORTANT INFORMATION REGARDING ALL MODELS

1. DuraNiche™ underwater lighting fixture housings are Underwriters Laboratories (UL) Listed under File E 39338- Category WBDT. These niches are New York City (NYC) Bureau of Electrical Control approved for use with low voltage (12 volt) lighting fixtures. UL Listed for fresh water and complies with National Electrical Code [NEC].
2. DuraNiche™ model SP0600U and SP0607 underwater fixture housings are UL Listed only for use with Hayward Submersible Light Fixture Series SP0520LED, SP0540, SP0570, SP0580 and SP0580S. Model SP0601 Underwater Light Fixture Housing (Niche) is UL Listed for use with Hayward Submersible Light Fixture Series SP0530LED and SP0590.
3. All DuraNiche™ underwater lighting fixture housings must be installed in compliance with Article 680 of the National Electrical Code (NEC) or other applicable electrical codes and with any applicable building codes. Article 680 requires that light fixtures be installed with the top of the fixture lens at least 18 inches below the normal water level of the pool or spa.
4. Most DuraNiche™ underwater lighting fixture housings are provided with two (2) Conduit Fittings. A 1" trade size -45° sweep elbow/coupling is provided for the purpose of directing the conduit pipe towards the SP0680/ SP0681 Listed Junction Box location and connecting the conduit pipe to the 45° sweep elbow. A 1" - 3/4" reducer bushing is provided to permit the use of 3/4" conduit pipe. These conduit fittings must be cemented to the fixture housing (niche), field supplied conduit pipe and to other conduit fittings using approved PVC primer and cement.
5. All DuraNiche™ underwater lighting fixture housings are provided with a combination bonding/grounding connector. The outside connection is the bonding connector as required by Article 680-26 of the NEC. The NEC requires that the bonding wire be AWG 8 or larger. Local codes may require a continuous loop and may require that the bonding point on the fixture housing (niche) be encapsulated. The inside connection is the grounding connector as required by Article 680-23B of the NEC. The NEC requires that where a nonmetallic conduit is used, an AWG 8 insulated copper conductor be installed in this conduit. This conductor is to be connected to the niche grounding connector. The connector and wire termination must be encapsulated in 3M Inc. Scotch Cast Wet Niche Potting Compound No. 2135 (UL File E130394) or equivalent to protect such connection from the possible deteriorating effect of pool water.
6. All DuraNiche™ niches are equipped with Internally-threaded connection for pressure testing of conduit line before installing light.

USE ONLY HAYWARD GENUINE REPLACEMENT PARTS

INSTALLATION INSTRUCTIONS FOR SP0600U AND SP0601U

FEATURES COMMON TO SP0600U AND SP0601U- FOR CONCRETE

1. 3/4" set-back plaster flange with tie-off holes to secure to rebar and assure positive positioning during guniting.
2. Unique 90° ledge at the flange bottom prevents "slumping" during plastering.
3. Niche cover (see back page) included with each niche, protects the niche and mounting threads during guniting.
4. The SP0601U small diameter niche has extra space for easy coiling and storage of the relamping cord.

Models SP0600U (Pool) and SP0601U (Spa) Underwater Lighting Fixture Housings are intended for installation in pools or spas with floors and walls formed of gunite or concrete (shotcrete) with a concrete reinforcing bar (rebar) frame. Gunite is a mixture of Portland Cement and sand while shotcrete is a high strength (4000 psi) concrete utilizing Portland Cement and small size aggregate.

The outside shape of the pool or spa is formed from SteelTek or other suitable material. In some cases, the excavated dirt wall will serve as the outside form. The inside wall of the pool or spa is formed from rebar that is bent to the desired shape (See Illustration A). The distance between the outer and inner wall is called the beam and is typically 8 to 12 inches. Rebar steel should be set at 10" for a 12" beam and 8" for a 10" beam. The distance between the niche flange and the outer wall should be the beam dimension. At all points where the rebar crosses, tie wire is used to connect the rebar securely.

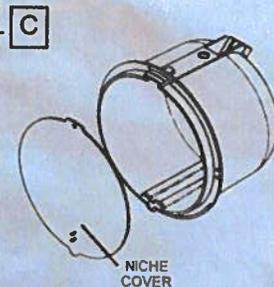

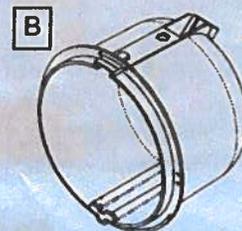

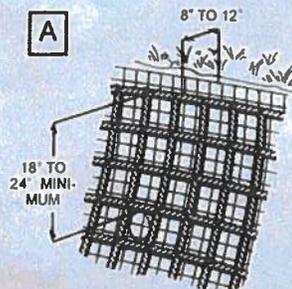

- 1 Position the Model SP 0600U (Pool) or SP 0601 U (Spa) between adjacent rebars such that the niche is held on four sides by sections of rebar. At the time the niches are installed it may be necessary to add sections of rebar or move existing sections to one side or another in order to insure that the niche is held securely. (see illustration B) The brass/bonding connector must be located at the 12 o'clock position (top center).

THE NEC REQUIRES THAT THE TOP OF THE LIGHT LENS BE AT LEAST 18 INCHES BELOW THE WATER LEVEL EXCEPT WHEN THE LUMINAIRE IS INSTALLED IN AN AREA OF THE SWIMMING POOL THAT IS NOT USED FOR SWIMMING AND THE LENS IS ADEQUATELY GUARDED TO KEEP ANY PERSON FROM CONTACTING IT. BE SURE TO POSITION NICHE SO THAT YOU COMPLY WITH THIS REQUIREMENT. SOME INSTALLERS POSITION NICHE 24 INCHES BELOW ANTICIPATED WATER LEVEL TO AVOID ANY INSPECTION AUTHORITY ISSUES WITH THIS REQUIREMENT

2. Once the niche(s) has been securely positioned (wedged) in the rebar it must be securely tied to the rebar with tie wire. Before tying niche in place make certain that niche is (vertical) plumb, and square to the form and that top of niche (where retaining screw is located) is at highest point at the 12 O'Clock position. The flanges of Niche Models SP0600U and SP0601U are provided with 187" diameter holes through which tie wire may be routed to facilitate securing the niche to the rebar. Tie wire should also be wrapped tightly around the outer circumference of the niche and then tied to the rebar. Once the niche is tied in place confirm that it is still plumb and that the distance from the outer wall to the niche flange is the correct beam dimension.

NOTE: The rebar will be approximately 2 inches from where the inside finished surface of the pool will be. You must be sure to leave approximately 2" between the DuraNiche™ flange and the rebar (see illustration C)

3. After attaching the niche to the rebar of the pool wall and cementing conduit and conduit fittings in place and connecting the #8 AWG bonding wire to the bonding connector as described, install the provided DuraNiche™ Cover. The niche cover must be installed in order to prevent gunite or concrete from entering the inside of the niche during the pouring/shooting process. Cover should be left in place until the light is installed in the niche. (see illustration C)
4. The outside bonding connection must be inspected before the concrete/gunite, pouring/shooting operation. Follow applicable codes. It is also necessary to keep concrete or gunite from hardening on the outer edge and flange of the niche during pouring/shooting.
5. Once the concrete/gunite has completely dried, the niche is ready to be "plastered". Plaster is typically a mixture of white Portland Cement and marble dust along with some pigment chosen to give the pool water the desired color. The "plaster" is applied about 1" thick in the area surrounding the niche. The distance between the front edge and the flange of the niche is filled with plaster.

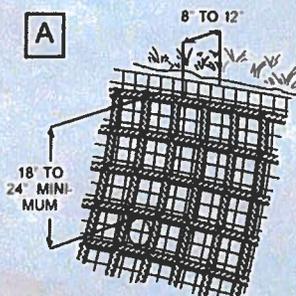

INSTALLATION INSTRUCTIONS FOR SP0600U AND SP0601U

FEATURES COMMON TO SP0600U AND SP0601U- FOR CONCRETE

1. 3/4" set-back plaster flange with tie-off holes to secure to rebar and assure positive positioning during guniting.
2. Unique 90° ledge at the flange bottom prevents "slumping" during plastering.
3. Niche cover (see back page) included with each niche, protects the niche and mounting threads during guniting.
4. The SP0601U small diameter niche has extra space for easy coiling and storage of the relamping cord.

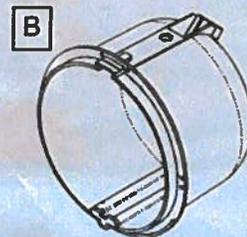

Models SP0600U (Pool) and SP0601U (Spa) Underwater Lighting Fixture Housings are intended for installation in pools or spas with floors and walls formed of gunite or concrete (shotcrete) with a concrete reinforcing bar (rebar) frame. Gunite is a mixture of Portland Cement and sand while shotcrete is a high strength (4000 psi) concrete utilizing Portland Cement and small size aggregate.

The outside shape of the pool or spa is formed from SteelTek or other suitable material. In some cases, the excavated dirt wall will serve as the outside form. The inside wall of the pool or spa is formed from rebar that is bent to the desired shape (See Illustration A). The distance between the outer and inner wall is called the beam and is typically 8 to 12 inches. Rebar steel should be set at 10" for a 12" beam and 8" for a 10" beam. The distance between the niche flange and the outer wall should be the beam dimension. At all points where the rebar crosses, tie wire is used to connect the rebar securely.

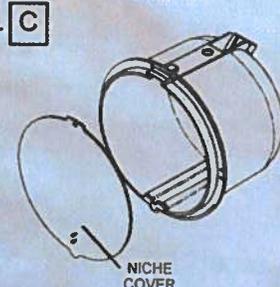

1. Position the Model SP 0600U (Pool) or SP 0601 U (Spa) between adjacent rebars such that the niche is held on four sides by sections of rebar. At the time the niches are installed it may be necessary to add sections of rebar or move existing sections to one side or another in order to insure that the niche is held securely. (see illustration B) The brass/bonding connector must be located at the 12 o'clock position (top center).

THE NEC REQUIRES THAT THE TOP OF THE LIGHT LENS BE AT LEAST 18 INCHES BELOW THE WATER LEVEL EXCEPT WHEN THE LUMINAIRE IS INSTALLED IN AN AREA OF THE SWIMMING POOL THAT IS NOT USED FOR SWIMMING AND THE LENS IS ADEQUATELY GUARDED TO KEEP ANY PERSON FROM CONTACTING IT BE SURE TO POSITION NICHE SO THAT YOU COMPLY WITH THIS REQUIREMENT. SOME INSTALLERS POSITION NICHE 24 INCHES BELOW ANTICIPATED WATER LEVEL TO AVOID ANY INSPECTION AUTHORITY ISSUES WITH THIS REQUIREMENT

2. Once the niche(s) has been securely positioned (wedged) in the rebar it must be securely tied to the rebar with tie wire. Before tying niche in place make certain that niche is (vertical) plumb, and square to the form and that top of niche (where retaining screw is located) is at highest point at the 12 O'Clock position. The flanges of Niche Models SP0600U and SP0601U are provided with 187" diameter holes through which tie wire may be routed to facilitate securing the niche to the rebar. Tie wire should also be wrapped tightly around the outer circumference of the niche and then tied to the rebar. Once the niche is tied in place confirm that it is still plumb and that the distance from the outer wall to the niche flange is the correct beam dimension.

NOTE: The rebar will be approximately 2 inches from where the inside finished surface of the pool will be. You must be sure to leave approximately 2" between the DuraNiche™ flange and the rebar (see illustration C)

3. After attaching the niche to the rebar of the pool wall and cementing conduit and conduit fittings in place and connecting the #8 AWG bonding wire to the bonding connector as described, install the provided DuraNiche™ Cover. The niche cover must be installed in order to prevent gunite or concrete from entering the inside of the niche during the pouring/shooting process. Cover should be left in place until the light is installed in the niche. (see illustration C)
4. The outside bonding connection must be inspected before the concrete/gunite, pouring/shooting operation. Follow applicable codes. It is also necessary to keep concrete or gunite from hardening on the outer edge and flange of the niche during pouring/shooting.
5. Once the concrete/gunite has completely dried, the niche is ready to be "plastered". Plaster is typically a mixture of white Portland Cement and marble dust along with some pigment chosen to give the pool water the desired color. The "plaster" is applied about 1" thick in the area surrounding the niche. The distance between the front edge and the flange of the niche is filled with plaster.

INSTALLATION INSTRUCTIONS FOR SP0607U

FEATURES EXCLUSIVE TO SP0607U- FOR VINYL/FIBERGLASS POOLS:

1. Attractive, injection-molded Duralon™ face rim assembly for corrosion-free performance.
2. Fits all standard punch designs, no tooling modifications are required.
3. Incorporates the dependability of Hayward's proven wall panel sealing method.

A. FOR VINYL LINED METAL WALL, FIBERGLASS PANEL OR FIBERGLASS POOLS

1. If not pre-punched by factory, drill and cut out wall panel sections as per dimensions below:

METAL OR FIBERGLASS PANEL CUT-OUT
 CIRCULAR PANEL CUTOUT - 10 3/4" MAX. 10 5/8" MIN.
 DRILL OR PUNCH - TEN (10) 5/16" HOLES ON 11 1/2" B.C., SPACED 36°
 DRILL OR PUNCH - TWO (2) 1/4" HOLES ON 11 1/2" B.C. SPACED 180°

2. Insert shell through panel section from interior of pool, securing Grounding Bracket at TOP (12 O'clock). For fiberglass pools (without liner): Caulk rear side of shell flange with silicone or other suitable sealing compound prior to inserting shell through pool wall.
3. Align the securing screw holes (at top and bottom) of the shell with those of the wall panel and insert the two pan head securing screws through shell and panel. This step may be eliminated for fiberglass pools (without liner).
4. Align the holes of the backup rim with those on the exterior side of the wall panel and fasten the shell and backup rim to the wall panel with the two No. 13 x 5/8" self-tapping pan head securing screws. For fiberglass pools (without liner): Caulk front surface of backup rim prior to installing.
5. Align holes in gasket with holes in shell and affix to shell with small quantity of adhesive. Cement to hold gasket in place. (Two large holes in gasket will fit over the pan heads of the securing screws.)
6. If vinyl lined pool, install liner before proceeding with Step 7.
7. Align second gasket (not required for fiberglass pools without liner) and face plate and fasten tightly to shell assembly with ten (10) No. 13 x 1 1/4" flat-head self-tapping screws provided. Use a properly sized Phillips screwdriver to tighten these heavy-duty screws. (Note: Make sure that the two countersinks on the back of faceplate line up with the heads of the two securing screws.) If vinyl liner pool, pierce liner through faceplate holes one at a time prior to inserting screws. Secure DuraNiche™ to pool with screws following this sequence:

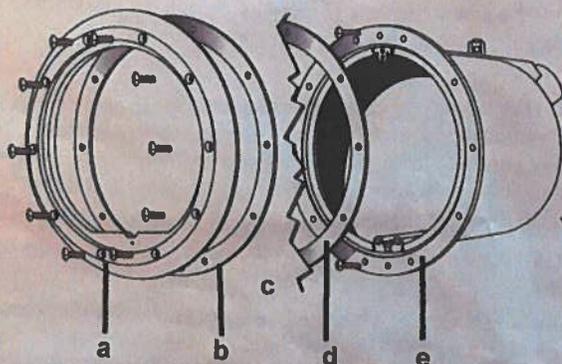

a. FACEPLATE b. GASKET c. VINYL LINER (OPTIONAL)
 d. GASKET e. DuraNiche™ f. POOL PANEL g. BACKUP RING

8. Be sure to follow pool manufacturer's instructions. If vinyl lined pool, cut out liner along inside edges of faceplate.

B. FOR WOOD OR FIBER PANEL VINYL LINER POOLS

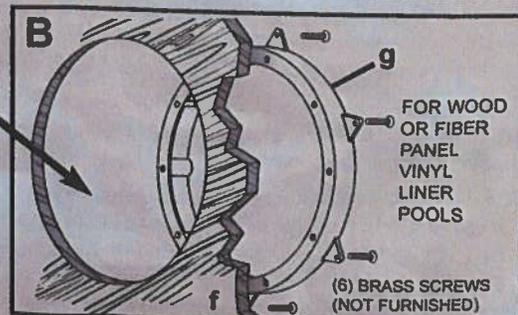

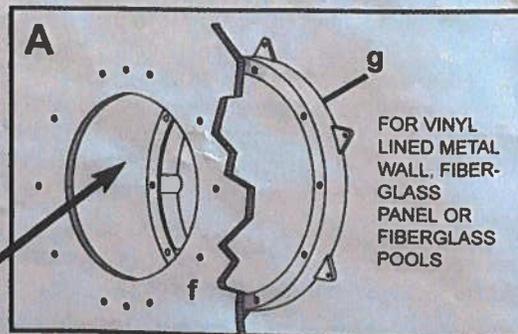

1. Cut out wall panel to 12 3/8" maximum, 12 1/8" minimum O.D. (Approximately 1/8" larger than O.D. of backup ring).
2. Insert backup ring through circular hole, from rear of panel, and fasten to rear of panel with (6) brass wood screws of proper length (not furnished).
3. Insert shell through panel from interior of pool, securing Grounding Bracket at TOP (12 o'clock).
4. Align the two securing screw holes at top and bottom of the shell with those of the backup ring with two (2) No. 13 x 5/8" self-tapping pan head securing screws.

REFER TO STEPS 5 THROUGH 8 AS ABOVE.

(10) #13 1 1/4" SCREWS

(2) #13 5/8" SCREWS

STEP INSTALLATION

1. Place the step in the appropriate location on your pool installation. The hardware package consists of the following components:

A. Eight leveling columns (Starter Kit).

- There are 4 each leveling columns cut at 36" and 4 each leveling columns cut at 24" for all 42" Steps in each Starter Kit.
- There are 4 each leveling columns cut at 42" and 4 each leveling columns cut at 24" for all 48" Steps in each Starter Kit.

B. One bag of 50 pieces of stainless steel Face Plate screws.

C. Eight "Step Leg Feet"

D. 'Slippery When Wet' Sticker.

NOTE: 2 Face Plate Caps are attached in packaging with warranty card on front of step.

2. Cut leveling support pipe to proper length as needed for your step. Additional leveling columns must be cut and placed under step for each support socket. (2" schedule 40 PVC) It is very important to brace the step to accommodate the size of your step.

3. Gently tap the leveling columns until they are fully seated in the sockets provided on the step support.

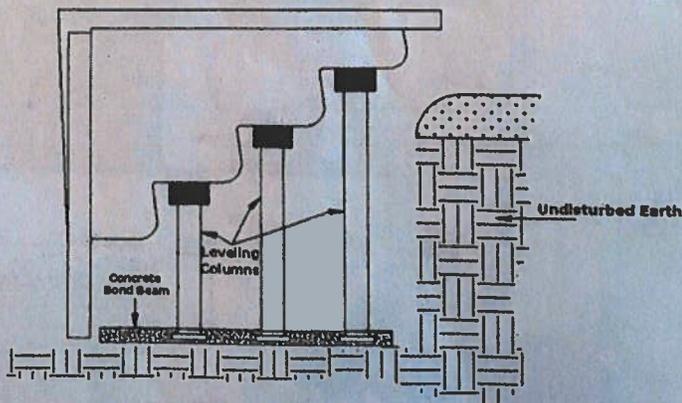

4. Properly level the step horizontally and vertically. Check the steps to make sure it is plumb with the flanking wall panels.

5. To insure proper installation, clamp the step to the flanking wall panels. This will allow proper wall and drilling alignment.

6. Pour a concrete bond beam at the base of the step at the same time the beam is poured around the wall and brace system.

7. Backfill the step cavity with granular material to achieve maximum compacting. Do not use clay, dirt, soil or other earthen materials for backfill. This material will not compact properly, leaving hollow cavities which will weaken step support over time.

***NOTE: Warranty will be void if not backfilled properly.
Leveling columns ARE NOT a substitute for proper backfilling.
Using only Leveling columns for support will void the warranty.**

COZY COVE/SWIMSEAT INSTALLATION

1. Place the step in the appropriate location on your pool installation.
The hardware package consists of the following components:

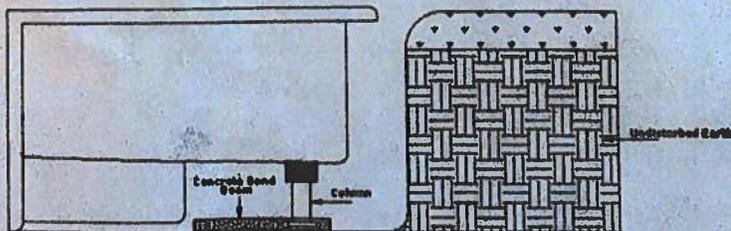

- A. 2 boxes of Eight leveling columns (Starter Kit).
 - There are 4 each leveling columns cut at 36" and 4 each leveling columns cut at 24" for all 42" Steps in each Starter Kit.
 - There are 4 each leveling columns cut at 42" and 4 each leveling columns cut at 24" for all 48" Steps in each Starter Kit.
- B. One bag of 50 pieces of stainless steel Face Plate screws.
- C. Eight "Step Leg Feet"
- D. "Slippery When Wet" Sticker.

NOTE: 2 Face Plate Caps are attached in packaging with warranty card on front of step.

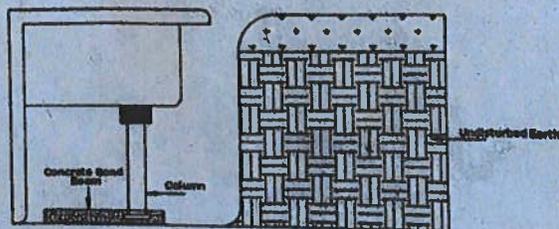

2. Cut leveling support pipe to proper length as needed for your cozy cove or swimseat. Additional leveling columns must be cut and placed under step for each support socket. (2" schedule 40 PVC). It is very important to brace the step to accommodate the size of your step.
3. Gently tap the leveling columns until they are fully seated in the sockets provided on the step support.
4. Properly level the cozy cove or swimseat horizontally and vertically. Check to make sure it is plumb with the flanking wall panels.
5. To insure proper installation, clamp the cozy cove or swimseat to the flanking wall panels. This will allow proper wall and drilling alignment.
6. Pour a concrete bond beam at the base of the cozy cove or swimseat at the same time the beam is poured around the wall and brace system.
7. Backfill the step cavity with granular material to achieve maximum compacting. Do not use clay, dirt, soil or other earthen materials for backfill. This material will not compact properly, leaving hollow cavities which will weaken step support over time.

***PLEASE NOTE:** The cozy cove/swimseat (with or without jets) are not steps and should not be used as such. Use as a step will void the warranty.
