

DESIGN CALCULATIONS

FOR

RUSSELL'S FREESTANDING SIGN

7015 W US Hwy 90 – Lake City

GENERAL NOTES:

1. Design is in accordance with the Florida Building Code 8th Edition (2023) for use within and outside the High Velocity Hurricane Zone (HVHZ).
2. Wind loads have been calculated per the requirements of ASCE 7-22 as shown herein, except where noted otherwise.
3. These engineering calculations pertain only to the structural integrity of those systems, components, and/or other construction explicitly specified herein and/or in accompanying engineering drawings. The existing host structure (if any) is assumed to be in good condition, capable of supporting the loaded system, subject to building department approval. No warranty, either expressed or implied, is contained herein.
4. System components shall be as noted herein. All references to named components and installation shall conform to manufacturer's or industry specifications as summarized herein.
5. Where site conditions deviate from those noted herein, revisions may be required or a separate site-specific engineering evaluation performed.
6. Aluminum components in contact with steel or embedded in concrete shall be protected as prescribed in the 2020 Aluminum Design Manual. Steel components in contact with, but not encased in, concrete shall be coated, painted, or otherwise protected against corrosion.
7. Engineer seal affixed hereto validates structural design as shown only. Use of this specification by contractor, et. Al, indemnifies and saves harmless this engineer for all costs & damages including legal fees & appellate fees resulting from deviation from this design.

Unconstrained (No rigid floor or pavement at ground surface)

Allowable lateral soil bearing pressure at 1/3 depth:

$$S1 = 2 \cdot Plat \cdot (d + ds) / 3$$

$$S1 = 550 \text{ psf}$$

$$\text{Total applied lateral load: } P_{tot} = 0.94 \text{ kips}$$

$$\text{Equiv ht of applied load: } h_{eq} = 8.21 \text{ ft}$$

$$A_s = 2.34 \cdot P_{tot} / (S1 \cdot B)$$

$$A_s = 2.0 \text{ ft}$$

$$d_{req} = A_s / 2 \cdot [1 + \sqrt{1 + 4.36 \cdot h_{eq} / A_s}]$$

$$d_{req} = 5.34 \text{ ft}$$

$$d_{req} < d \quad \text{OK}$$
