re: ELEVATION LETTER – 525 SW PINEHURST DRIVE, LAKE CITY, FL

As requested, I inspected the building site for the proposed construction at the above referenced site. The footing for the foundation had been excavated at the time of the inspection. The photo was taken from corner of the proposed home location looking southwest. The site drains to the west and then to the south to a borrow ditch adjacent to the road.

Per the Forest Country 6<sup>th</sup> Addition Plat, the minimum finished floor elevation is listed as 110.70. The revised finished floor elevation shall be **109.80**. The elevation of the street centerline is 109.6 +/- . The revised finished floor elevation is sufficient to protect the structure against water damage from a base flood event. The site will be graded to channel direct precipitation runoff from the home and to the street.

I certify that the existing finished floor elevation listed above will protect the structure against water damage from a base flood event, as defined in Article 8 of the Land Development Regulations.

Should you have any questions, please don't hesitate to contact me.

Respectfully,
