

SYMPHONY® II POWER MANAGEMENT SYSTEM

Symphony® II Power Management System automatically balances the power needs of your home's electrical loads — including high-wattage items like air conditioning units, electric stoves and electric dryers — to give your family uninterrupted, whole-house power with a smaller, more affordable home generator.

BRIGGS & STRATTON® THE SMART CHOICE

For the discerning homeowner that is looking for the smartest, most reliable permanent backup power solution.

Smart Power

- Active monitoring allows you to purchase a smaller, more affordable home generator system
- The smart way to direct backup power anywhere in your house, without the need for a large, expensive generator

Cost Effective

- Lower fuel costs
- Lower installation costs
- Reduced initial investment
- Wired into your home's existing wiring, saving even more on the cost of installation

Reliable

- Load management protects against generator overload so your family can continue with its daily routine uninterrupted

Flexible

- Lets you prioritize the use of up to 8 high-wattage appliances based on your family's specific power needs

Customizable

- Customized installation that can easily be adapted to meet your changing power requirements

MODULES	50A, Low Voltage for HVAC, or Dual Low Voltage
MONITORING	Conventional Outlet Plug-In Monitor System Status and Availability of Managed Loads Service Entrance
DISCONNECT ¹	Yes

¹ Review local codes to determine if a transfer switch with separate service entrance disconnect is required.

SYMPHONY® II POWER MANAGEMENT SYSTEM

How does THIS ALL WORK? Automatically.

1

The utility power goes out

2

Generator system automatically detects the outage & starts

3

You have power to your lights, refrigerator, TV and other items

4

Utility power returns, the generator shuts off

ADDITIONAL INFORMATION

What's a transfer switch?

Usually installed outside next to your electric meter or inside right next to your circuit breaker box, a transfer switch senses when your utility power is out and automatically "switches" the home over to generator power. Also, the transfer switch houses the brains, or controller, of the Symphony® II Power Management System.

What's a module?

The Symphony® II modules communicate with your generator via your home's existing wiring, saving you installation costs. Inside the module is a switch that merely turns an appliance on or off. The modules can be placed anywhere throughout the home for a customized installation.

Modules are easily added to manage up to 8 high-wattage appliances, and must be purchased separately. Most customers only require 1 or 2 modules based on their custom needs.
