Lien Release
Interest in the described vehicle is hereby released
By_____
Title_____
Date_____

IMPORTANT INFORMATION

1. When ownership of the vehicle described herein is transferred, the seller MUST complete in full the Transfer of Title by Seller section at the bottom of the certificate of title.
2. Upon sale of this vehicle, the seller must complete the notice of sale on the reverse side of this form.
3. Remove your license plate from the vehicle.
4. See the web address below for more information and the appropriate forms required for the purchaser to title and register the vehicle, mobile home or vessel: http://www.hsmv.state.fl.us/html/titlinf.html

TRANSFER OF TITLE BY SELLER (This section must be completed at the time of sale.)

Federal and/or state law require that the seller state the mileage, purchaser's name, selling price and date sold in connection with the transfer of ownership.
Failure to complete or providing a false statement may result in fines and/or imprisonment.
This title is warranted to be free from any liens except as noted on the face of the certificate and the motor vehicle or vessel described is hereby transferred to:

Seller Must Enter Purchaser's Name: _____ Address: _____

Seller Must Enter Selling Price: _____ Seller Must Enter Date Sold: _____

I/We state that this ☐ 5 or ☐ 6 digit odometer now reads [ ][ ][ ][ ][ ][ ].[ ][x] (no tenths) miles, date read _____ and I hereby certify that to the best of my knowledge the odometer reading:

☐ 1. reflects ACTUAL MILEAGE. ☐ 2. is IN EXCESS OF ITS MECHANICAL LIMITS. ☐ 3. is NOT THE ACTUAL MILEAGE.

UNDER PENALTIES OF PERJURY, I DECLARE THAT I HAVE READ THE FOREGOING DOCUMENT AND THAT THE FACTS STATED IN IT ARE TRUE.

SELLER Must Sign Here: _____ CO-SELLER Must Sign Here: _____

Print Here: _____ Print Here: _____

Selling Dealer's License Number: _____ Tax No. _____ Tax Collected: _____

Auction Name _____ License Number: _____

PURCHASER Must Sign Here: _____ CO-PURCHASER Must Sign Here: _____

Print Here: _____ Print Here: _____

NOTICE: PENALTY IS REQUIRED BY LAW IF NOT SUBMITTED FOR TRANSFER WITHIN 30 DAYS AFTER DATE OF PURCHASE

Horton Homes, Inc.

P. O. Drawer 4410
Eatonton, Georgia 31024

Plant Number 5

Date of Manufacture	HUD No.
2-16-96	GEO 1443766

Manufacturer's Serial Number and Model Unit Designation

H 215549 G 16X60 2+2 NPLH

Design Approval by (D.A.P.I.A.)

HILBORN WERNER CARTER

This manufactured home is designed to comply with the federal manufactured home construction and safety standards in force at time of manufacture. (For additional information, consult owner's manual.)

The factory installed equipment includes:

Equipment	Manufacturer	Model Designation
For heating	NORDYNE	E3EB-012H
For air cooling		
For cooking	GE	JBS03BB2WB
Refrigerator	GE	GTR17BBSAWW
Water heater	INTERTHERM	IN130SHMSE3
Washer		
Clothes Dryer		
Dishwasher		
Garbage Disposal		
Fireplace		

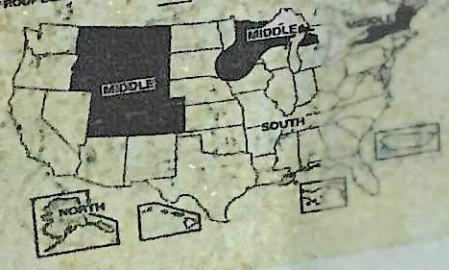
HOME CONSTRUCTED FOR ☐ Zone I XX Zone II ☐ Zone III

This home has not been designed for the higher wind pressure and uplift forces required for coastal/coastal areas and should not be located within 1500' of the coastline as measured from the home and its anchoring and foundation system have been designed for the conditions specified for Exposure D in ANSI/ASCE 7-88.

The home has ___ has not X been equipped with storm shutters or other protective coverings for window and exterior door openings. For homes designed to be located in Wind Zones II or III, which have not been provided with shutters or equivalent covering devices, it is strongly recommended that the home be made ready to be equipped with these devices in accordance with the method described in the manufacturer's printed instructions.

BASIC WIND ZONE MAP

DESIGN ROOF LOAD ZONE MAP — North 40 PSF — Middle 30 PSF — XX South 30 PSF — Other ___ PSF



COMFORT HEATING

This manufactured home has been thermally insulated to conform with the requirements of the federal manufactured home construction and safety standards for all locations within u/o value zone ___1___ (See map at bottom)

Heating equipment manufacturer and model (see list at left)

The above heating equipment has the capacity to maintain an average 70° F temperature in this home at outdoor temperatures of -15 F.

To maximize furnace operating economy, and to conserve energy, it is recommended that this home be installed where the outdoor winter design temperature (97½%) is not higher than 10.5 degrees Fahrenheit.

The above information has been calculated assuming a maximum wind velocity of 10 mph at standard atmospheric pressure.

COMFORT COOLING

☐ **Air conditioner provided at factory (Alternate I)**

Air conditioner manufacturer and model (see list at left)

Certified capacity ___ B.T.U./hour in accordance with the appropriate air conditioning and refrigeration institute standards.

The central air conditioning system provided in this home has been sized at using an orientation of the front (hitch end) of the home facing ___. On this basis the system is designed to maintain an indoor temperature of 75° F when outdoor temperatures are ___ F dry bulb and ___ F wet bulb.

The temperature to which this home can be cooled will change depending upon the amount of exposure of the windows of this home to the sun's radiant heat. Therefore, the home's heat gains will vary dependent upon its orientation to the sun and any permanent shading provided. Information concerning the calculation of cooling loads at various locations, window exposures and shadings are provided in Chapter 22 of the 1989 edition of the ASHRAE Handbook of Fundamentals.

Information necessary to calculate cooling loads at various locations and orientations is provided in the special comfort cooling information provided with this home.

☒ **Air conditioner not provided at factory (Alternate II)**

The air distribution system of this home is suitable for the installation of central air conditioning.

The supply air distribution system installed in this home is sized for a manufactured home central air conditioning system of up to 35,900 B.T.U./hr. rated capacity which are certified in accordance with the appropriate air conditioning and refrigeration institute standards, when the air circulators of such air conditioners are rated at 0.3 inch water column static pressure or greater for the cooling air delivered to the manufactured home supply air duct system.

Information necessary to calculate cooling loads at various locations and orientations is provided in the special comfort cooling information provided with this manufactured home.

☐ **Air conditioning not recommended (Alternate III)**

The air distribution system of this home has not been designed in anticipation of its use with a central air conditioning system.

To determine the required capacity of equipment to cool a home efficiently and economically, a cooling load (heat gain) calculation is required. The cooling load is dependent on the orientation, location and the structure of the home. Central air conditioners operate most efficiently and provide the greatest comfort when their capacity closely approximates the calculated cooling load. Each home's air conditioner should be sized in accordance with Chapter 22 of the American Society of Heating, Refrigerating and Air Conditioning Engineers (ASHRAE) Handbook of Fundamentals, 1989 edition, once the location and orientation are known.

INFORMATION PROVIDED BY THE MANUFACTURER NECESSARY TO CALCULATE SENSIBLE HEAT GAIN

Walls (without windows and doors)	U =	.097
Ceilings and roofs of light color	U =	0
Ceilings and roofs of dark color	U =	.070
Floors	U =	.084
Air ducts in floor	U =	.084
Air ducts in ceiling	U =	0
Air ducts installed outside the home	U =	0
The following are the duct areas in this home		70 sq. ft.
Air ducts in floor		0 sq. ft.
Air ducts in ceiling		0 sq. ft.
Air ducts outside the home
