NOTICE: IN ADDITION TO THE REQUIREMENTS OF THIS PERMIT, THERE MAY BE ADDITIONAL RESTRICTIONS APPLICABLE TO THIS PROPERTY THAT MAY BE FOUND IN THE PUBLIC RECORDS OF THIS COUNTY. AND THERE MAY BE ADDITIONAL PERMITS REQUIRED FROM OTHER GOVERNMENTAL ENTITIES SUCH AS WATER MANAGEMENT DISTRICTS, STATE AGENCIES, OR FEDERAL AGENCIES.

"WARNING TO OWNER: YOUR FAILURE TO RECORD A NOTICE OF COMMENCEMENT MAY RESULT IN YOUR PAYING TWICE FOR IMPROVEMENTS TO YOUR PROPERTY. IF YOU INTEND TO OBTAIN FINANCING, CONSULT WITH YOUR LENDER OR AN ATTORNEY BEFORE RECORDING YOUR NOTICE OF COMMENCEMENT."

This Permit Must Be Prominently Posted on Premises During Construction

PLEASE NOTIFY THE COLUMBIA COUNTY BUILDING DEPARTMENT AT LEAST 24 HOURS IN ADVANCE OF EACH INSPECTION, IN ORDER THAT IT MAY BE MADE WITHOUT DELAY OR INCONVIENCE, PHONE 758-1008. THIS PERMIT IS NOT VALID UNLESS THE WORK AUTHORIZED BY IT IS COMMENCED WITHIN 6 MONTHS AFTER ISSUANCE.

The Issuance of this Permit Does Not Waive Compliance by Permittee with Deed Restrictions.

New Construction Subterranean Termite Soil Treatment Record

OMB Approval No. 2502-0525
(exp. 10/31/2005)

This form is completed by the licensed Pest Control Company.

Public reporting burden for this collection of information is estimated to average 15 minutes per response, including the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information. This information is mandatory and is required to obtain benefits. HUD may not collect this information, and you are not required to complete this form, unless it displays a currently valid OMB control number.
Section 24 CFR 200.926d(b)(3) requires that the sites for HUD insured structures must be free of termite hazards. This information collection requires the builder to certify that an authorized Pest Control company performed all required treatment for termites, and that the builder guarantees the treated area against infestation for one year. Builders, pest control companies, mortgage lenders, homebuyers, and HUD as a record of treatment for specific homes will use the information collected. The information is not considered confidential.

This report is submitted for informational purposes to the builder on proposed (new) construction cases when soil treatment for prevention of subterranean termite infestation is specified by the builder, architect, or required by the lender, architect, FHA, or VA.

All contracts for services are between the Pest Control Operator and builder, unless stated otherwise. #23927

Section 1: General Information (Treating Company Information)

Company Name: Aspen Pest Control, Inc.
Company Address: 301 NW Cole Terrace City Lake City State FL Zip 32055
Company Business License No. JB109476 Company Phone No. 386-755-3611
FHA/VA Case No. (if any)

Section 2: Builder Information

Company Name: Harold Frankel Company Phone No.

Section 3: Property Information

Location of Structure(s) Treated (Street Address or Legal Description, City, State and Zip) 115 SW Bonanza Glen
Lake City, FL 32025
Airplane Hangar
Type of Construction (More than one box may be checked) ☒ Slab ☐ Basement ☐ Crawl ☐ Other
Approximate Depth of Footing: Outside V Inside 2' Type of Fill Sand

Section 4: Treatment Information

Date(s) of Treatment(s) 12/30/05
Brand Name of Product(s) Used Pro Build TC
EPA Registration No. 100-1006
Approximate Final Mix Solution % .5%
Approximate Size of Treatment Area: Sq. ft. 2880 Linear ft. — Linear ft. of Masonry Voids —
Approximate Total Gallons of Solution Applied 290 gals.
Was treatment completed on exterior? ☐ Yes ☒ No
Service Agreement Available? ☐ Yes ☐ No
Note: Some state laws require service agreements to be issued. This form does not preempt state law.

Re: JOB NO. 15070R1
BUILDING SIZE:
WIDTH : 47.75 ft.
LENGTH : 60 ft.
EAVE HT : 16 ft.

JOBSITE : LAKE CITY, FL

To Whom It May Concern:

This is to certify that the above referenced building is designed in accordance with the order documentation, the Ninth Edition of the American Institute of Steel Construction (AISC) "Manual of Steel Construction" and the 1986 Edition of American Iron and Steel Institute (AISI) " Cold Formed Steel Design Manual. "The basic loads of the subject building meet or exceed the minimum county climatic data as published in the 1996 edition of the MBMA " Low Rise Building Systems Manual ".

The criteria for application of design loads are follows
Governing Code : FBC 04

Roof Dead Load : 2 psf plus wt. of metal bldg structure

Live Load based on the tributary area :

0 - 200 sq. ft.....20 psf
201 - 600 sq. ft.....16 psf
over 600 sq. ft.....12 psf

Collateral Load	: 0 psf	Roof Snow Load	: 0 psf
Wind Load (3 sec gust)	: 100 mph	Snow Exp. Fac	: N/A
Enclosure Type	: Closed	Snow Imp. Fac.	: N/A
Wind Exp. Cat	: B	Seismic Coef SDS	: .08
Wind Imp. Factor	: 1.00	Seismic Coef SDI	: .04
Ground Snow Load	: 0 psf	Seismic Imp. Fac1	: 1.0

This Letter of Certification applies solely to the building and its component parts as furnished by the Metal Building Manufacturer. Doors, windows and louvers are not structural components of the building. It is the responsibility of the owner to determine if wind lock accessories are supplied if required. Certification specifically excludes any foundation, masonry, or general contract work.

Sincerely,

Charles W. Embden

AAMA/NWWDA 101/I.S.2-97 TEST REPORT

Rendered to

MI HOME PRODUCTS, INC.
650 West Market Street
P.O. Box 370
Gratz, Pennsylvania 17030-0370

Report No: 01-41134.01
Test Date: 03/07/02
Report Date: 03/26/02
Expiration Date: 03/07/06

Project Summary: Architectural Testing, Inc. (ATI) was contracted by MI Home Products, Inc. to perform tests on Series/Model 650 Fin, aluminum single hung window at their facility located in Elizabethville, Pennsylvania. The samples tested successfully met the performance requirements for a H-R40 52 x 72 rating.

Test Specification: The test specimen was evaluated in accordance with AAMA/NWWDA 101/I.S.2-97, *Voluntary Specifications for Aluminum, Vinyl (PVC) and Wood Windows and Glass Doors.*

Test Specimen Description:

Series/Model: 650 Fin

Type: Aluminum Single Hung Window

Overall Size: 4' 4-1/4" wide by 6' 0-3/8" high

Active Sash Size: 4' 1-3/4" wide by 3' 0-5/8" high

Daylight Opening Size: 3' 11-3/8" wide by 2' 9-1/2" high

Screen Size: 4' 0-1/4" wide by 2' 11-1/8" high

Finish: All aluminum was white.

Glazing Details: The active and fixed lites utilized 5/8" thick, sealed insulating glass constructed from two sheets of 1/8" thick, clear annealed glass and a metal reinforced butyl spacer system. The active sash was channel glazed utilizing a flexible vinyl wrap-around gasket. The fixed lite was interior glazed against double-sided adhesive foam tape and secured with PVC snap-in glazing beads.

Test Specimen Description: (Continued)

Weatherstripping:

Description	Quantity	Location
0.230" high by 0.270" backed polypile with center fin	1 Row	Fixed meeting rail
0.250" high by 0.187" backed polypile with center fin	2 Rows	Active sash stiles
1/2" x 1/2" dust plug	4 Pieces	Active sash, top and bottom of stiles
1/4" foam-filled vinyl bulb seal	1 Row	Active sash, bottom rail

Frame Construction: The frame was constructed of extruded aluminum with coped, butted, and sealed corners fastened with two #8 x 1" screws through the head and sill into each jamb screw boss. End caps were utilized on the ends of the fixed meeting rail and secured with two 1-1/4" screws per cap. Meeting rail was secured to the frame utilizing two 1-1/4" screws.

Sash Construction: The sash was constructed of extruded aluminum with coped, butted, and sealed corners fastened with two #8 x 1-1/2" screws through the rails into each jamb screw boss.

Screen Construction: The screen was constructed from roll-formed aluminum with keyed corners. The fiberglass mesh was secured with a flexible spline.

Hardware:

Description	Quantity	Location
Metal cam lock with keeper		Midspan, active meeting rail with keeper adjacent on fixed meeting rail
Plastic tilt latch	2	Active sash, meeting rail ends
Metal tilt pin	2	Active sash, bottom rail ends
Balance assembly	2	One in each jamb
Screen plunger	2	4" from rail ends on top rail

ALLEN N. REEVES
CERTIFICATE
NO. 19[illegible]
STATE OF
FLORIDA
PROFESSIONAL ENGINEER

Test Specimen Description: (Continued)

Drainage: Sloped sill

Reinforcement: No reinforcement was utilized.

Installation: The test specimen was installed into a 2 x 8 #2 Spruce-Pine-Fir wood test buck with #8 x 1-5/8" drywall screws every 8" on center around the nail fin. Polyurethane was used as a sealant under the nail fin and around the exterior perimeter.

Test Results:

The results are tabulated as follows:

Paragraph	Title of Test - Test Method	Results	Allowed
2.2.1.6.1	Operating Force	11 lbs	30 lbs max
	Air Infiltration (ASTM E 283-91) @ 1.57 psf (25 mph)	0.13 cfm/ft^2	0.3 cfm/ft^2 max
	Water Resistance (ASTM E 547-00) (with and without screen) WTP = 2.86 psf	No leakage	No leakage
2.1.4.1	Uniform Load Deflection (ASTM E 330-97) (Measurements reported were taken on the meeting rail) (Loads were held for 33 seconds)		
	@ 25.9 psf (positive)	0.42"*	0.26" max.
	@ 34.7 psf (negative)	0.43"*	0.26" max.
2.1.4.2	Uniform Load Structural (ASTM E 330-97) (Measurements reported were taken on the meeting rail) (Loads were held for 10 seconds)		
	@ 38.9 psf (positive)	0.02"	0.18" max.
	@ 52.1 psf (negative)	0.02"	0.18" max.

***Note #1:** The tested specimen meets the performance levels specified in AAMA/NWWDA 101/I.S. 2-97 for air infiltration.*

**Exceeds L/175 for deflection, but passes all other test requirements.*

HI-FOLD DOORS

...the ONLY bi-fold doors with high-clearance advantages

As the Hi-Fold Door rises (right), the smooth-rolling steel wheels on its exclusive auxiliary arms contact the jamb posts to guide and support the door into the full-open position. When the door is closed, the auxiliary arms store themselves against the jamb posts and remain flush with the building until the next operation.

Automatic Latching Video

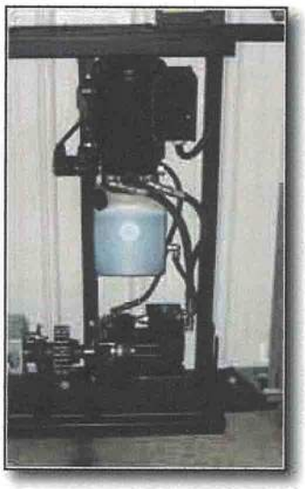
Hand

HI-FOLD DOORS

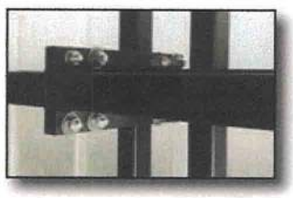
...the ONLY bi-fold doors with high-clearance advantages

New

High speed, hydraulically-powered operator option (patent pending)



Get the speed and power only a hydraulic operator can offer. A two horsepower electric motor runs a hydraulic pump and supplies pressure to a hydraulic wheel motor. System comes complete with a safety brake to lock door in position in the event of hydraulic pressure loss. System is shipped fully assembled, wired, plumbed and tested. Maintenance free operation in all climates.

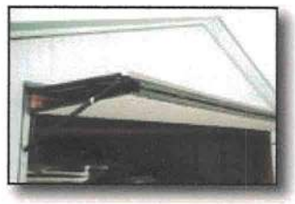


Strong, welded-steel frame assures long life.

Hi-Fold Door panels are built with double, rectangular, structural-steel tubes at the center hinge line (2" x 4" on doors to 46' wide; 2" x 6" on wider doors) and 1 1/2" or 2" square structural-steel tubing, depending on door size, for the remainder of the frame. Doors over 46' wide are made in two sections that bolt together through super-strong, 1/2" steel butt-plate joints. Strong mounting hinges (4,5,7 or 9, depending on door width) are welded to the top rail.

Welded-steel trusses withstand strongest wind loads.

All Hi-Fold Doors receive one to three inside trusses. Made of heavy-gauge, steel tubing with angle-iron webbing, they provide extra strength to control wind-load deflection when the door is closed and to help the "dogleg" center



Double-strength center hinge design eliminates sagging.

Unique, "dogleg" center hinge design, formed by the rectangular-steel members on both the top and bottom Hi-Fold Door panels, provides a "double-strength" beam that virtually eliminates sagging in the full-open position. This strength, combined with the strength of the welded-steel trusses on the inside of the door, provides even greater resistance to wind-load when the door is closed. A floor cane-bolt on all doors over 40' wide further resists wind-loads.

HI-FOLD DOORS

...the ONLY bi-fold doors with high-clearance advantages

Applications Gallery

Hi-Fold Doors fill many needs!

You won't go wrong with quality-built Hi-Fold Doors! They're the only bi-fold doors with high-clearance advantages, requiring less overhead space. Made of heavy-duty steel tubing in sizes up to 70-feet wide and 20-feet high, their rugged, all-welded construction prepares them for many years of day-in and day-out use with minimum maintenance. Cost-saving, standard bi-folds are also available for installations where Hi-Fold advantages are not required. A dependable, three year warranty covers all materials and workmanship.

HI-FOLD DOORS

...the ONLY bi-fold doors with high-clearance advantages

HI-FOLD DOOR SPECIFICATIONS

- **Standard door sizes** - 12' to 70' clear opening width: heights to 20' clear.
- **Main door structure** - Double 2" x 4" Class A500 14-gauge structural center hinge line tubing on doors to 46' wide and double 2" x 6" Class A500 on larger doors.
- **Door frame** - 14-gauge, welded, Class A513 square steel tubing: 1-1/2" x 1-1/2" on doors up to 46' wide: 2" x 2" on doors over 46' wide. Door frame unitized on doors to 46' x 18'. Doors over 18' high and over 46' wide built in right and left halves. Doors over 18' high may have the top and bottom horizontally divided to facilitate freight.
- **Door trusses** - Heavy-gauge, steel tubing with angel iron webbing: 1 to 3 horizontal trusses, 6 1/2" to 12" deep, depending on door width, height and load requirements.
- **Door finish** - All doors primed with black water base oxide and painted with black ester enamel epoxy.
- **Hinges** - Strong factory welded leaf type hinges are installed on the horizontal centerline and top of the door. Top hinge can be ordered with 9-1/4" wide leaf up for wood buildings or 3" wide leaf up for steel buildings. Five top hinges on doors to 34' wide, seven hinges on doors over 34' and nine hinges on doors over 56' wide and 16' tall.
- **Auxiliary arms** - Patented, high-clearance door support arms made of heavy-gauge square-steel tubing with self-concealing chain followers.
- **Wheels** - roller wheels on door bottom and Auxiliary Arms are solid steel with sealed roller bearings inserts.
- **Drive unit** - 1 h.p. to 2 h.p. motor with 45 to 1 speed reducer. Electric brake installed on all doors. Jack shaft with dual chain drives supplied on all doors. Motor mounted to side on doors over 34' wide.
- **Bottom follower system** - Hold bottom of door against building with door closed. Rubber bottom seal - 3" space between door frame and finished floor sealed with standard 12" wide bottom seal.
- **Floor cane-bolt** - Factory installed at center of door over 40' wide. Cane-bolt slides thru sleeve on door into a hole drilled in the floor.
- **Warranty** - 3 years on materials and workmanship.

Optional Features

- **Extra-heavy duty trussing** - Standard wind load can be increased or special demands provided.
- **Rubber top seal** - Standard 9" wide rubber roofing membrane with ultraviolet inhibitor to weather proof top of door.
- **Weather-strip package** - Supplied in bulk on a per foot basis for sealing between door frame and building jamb on vertical and horizontal surfaces and at center hinge area.
- **Jamb reinforcement rail** - 10 gauge galvanized steel 5" wide, suitable for doors to 46' wide, 3/16" oxide primed plate 5-1/2" wide available for doors wider than 46'. Wood or concrete jamb buildings require a reinforcing plate for operation.
- **Automatic "knee action" jamb latch** - Patented drive shaft driven latch reaches out and pulls door securely closed before motor shuts off. Automatic cane bolt supplied on doors over 40' wide. Single location latches deleted. Safety edge recommended.
- **Safety edge** - Full width sensing switch to automatically stop and reverse a closing door if obstacle is encountered. Attaches to bottom of door prior to bottom seal.
- **Dead-man operating control** - NEMA

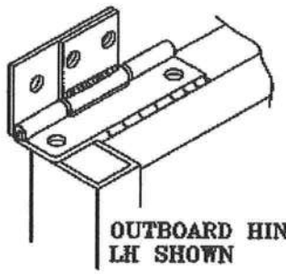
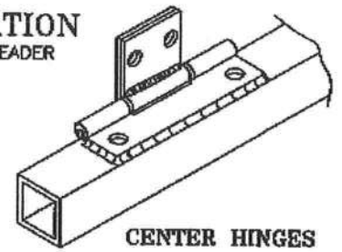
When door is open it is held up by 4 independent lift cables

HINGE INSTALLATION
FOR STEEL STRUCTURE HEADER

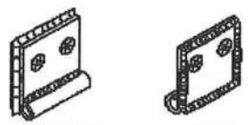


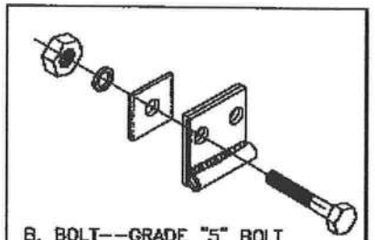
OUTBOARD HINGES
LH SHOWN



CENTER HINGES

A. WELD 4 SIDES AND HOLES ALL AROUND.





B. BOLT--GRADE "5" BOLT
2 BOLTS PER HINGE
DRILL FOR HINGE USING HINGE AS GUIDE

ATTACHENT TO STUB COLUMN:
EACH OUTBOARD HINGE IS SUPPLIED WITH AN EXTENSION FOR 2-BOLT ATTACHMENT TO THE VERTICAL COLUMN.
THERE ARE TWO OPTIONS:
2 BOLTS REQUIRED AT EACH HINGE
OR
WELDING THE HINGE TO THE STUB IS ACCEPTABLE.

NOTE:
WELD THE FULL PERIMETER OF THE HINGE. THE DOOR MUST BE PARTIALLY OPEN TO COMPLETE THE WELD ACROSS THE HINGE BOTTOM. OUTBOARD HINGES WILL EXTEND BEYOND THE VERTICAL COLUMN, MAKING IT NECESSARY TO WELD A VERTICAL LAP JOINT. WELD ON BACK OF HINGE AT COLUMN.

	safety factor, wi cable, compare to minimum of 5		5.9	

HINGE STRENGTH ANALYSIS

Note three Grade 5, 3/8 ϕ bolts

(A) Bolts in tension

For force perpendicular to hinge plate.

Force $P_\perp$ is multiplied to bolts due to pivot point @ A.

$$F_{bolt} = \frac{P_\perp \times 1.55}{.75} = 2.07\,P_\perp$$

In tension:

$$\sigma_{T\,bolt} = \frac{F_{bolt}}{3A_{cc}} = \frac{2.07(P_\perp)}{3(.0775\,in^2)}$$

note Gr 5 bolt has S_y = yield strength of 85ksi ⇒ force to yield = $P_\perp$

$$P_\perp = \frac{S_y \times 3 \times .0775\,in^2}{2.07} = \boxed{9542\,lb}$$

(B1) Bolts in shear due to parallel-to-plate force P_p

$$\tau = \frac{P_p}{3 \times A_{shear}} = \frac{P_p}{3 \times .0671\,in^2}$$

Shear yield strength = $\frac{S_{yield}}{2}$ = 42,500 psi

Failure, in shear yield = $P_p = 42{,}500\,psi \times 3 \times .0671 = \boxed{8645\,lb}$

$P_\perp$ 2 — see next sheet

(C) Bearing Stress in bolt holes, in 3/8" mat'l (see figure above)

for force P_p parallel to plate:

$$\sigma_c = \frac{P}{3xA} = \frac{P_p}{3 \times 3/8 \times 3/8}$$

Note: 3/8 bolt is in 1/2 ϕ hole, but assume 3/8 ϕ hole (conservative)

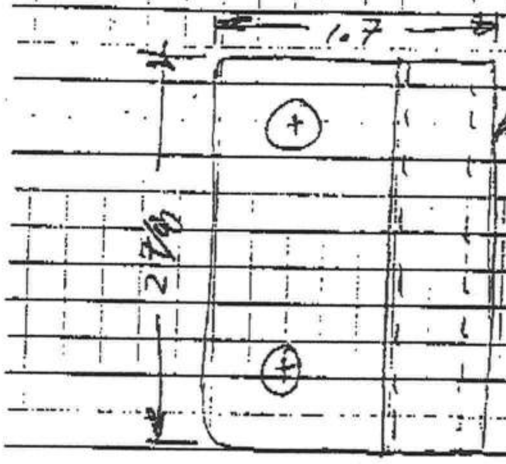
yield strength S_y = 28,000 psi

Force to yield = P_p = 28ksi x 3 x 3/8 x 3/8 = $\boxed{11{,}812\,lb}$

See hinge calcs.xls spreadsheet
Mitchael Brito Hi fold Door, 16X60

HINGE STRENGTH ANALYSIS 12/3/03

(B2) Weld in shear
for force parallel to plate,
Will look @ single center section, which is conservative compared to wider end hinge section. Holes are ignored.



Assume welded all around perimeter

$$P_{erim} = 2\left(2\tfrac{7}{8}\right) + 2(1.7)$$

$$= 9.15''$$

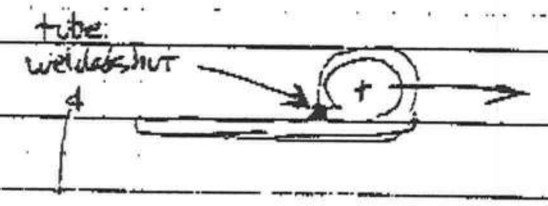
Welds in shear:

$$F_{allowable} = P_p = w \times P_{erim} \times 9600$$

(w = width of weld fillet; 9600 = allowable #/in)

$$= .12\,(9.15)\,9600$$

$$= \boxed{10541\ lb}$$



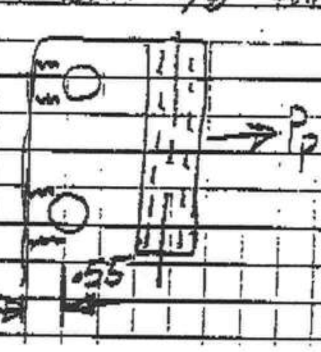
(E) Tear apart Hinge Tube, with tube welded shut
.12 thick mat'l × 2 7/8" long
Area in tension = 2 × .12 × 2 7/8 = .69 in²

$$\sigma_T = \frac{P}{A} \Rightarrow P_{allowed,\ to\ yield} = S_y \times A$$

$$= 28{,}000\,psi \times .69\ in^2$$

$$= \boxed{19230\ lb}$$

(D) Tear out of Holes – for force // to plate
Using only 2 holes (which align w/ center section)
with 3/8 thick section



Shear yield = 28,000 / 2

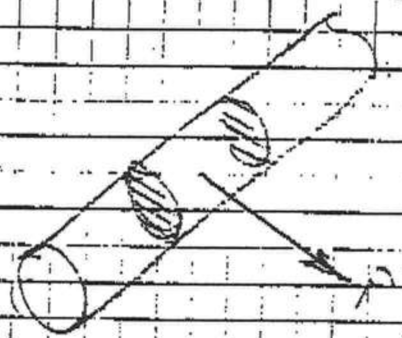
$$\tau = \frac{P_P}{A} = \frac{P_P}{2 \times 2 \times .55 \times \frac{3}{8}}$$

$$P_{P\,allowed,\ to\ yield} = 14{,}000\,psi \times 2 \times 2 \times .55 \times \tfrac{3}{8}$$

$$= \boxed{11550\ lb}$$

HINGE STRENGTH ANALYSIS 12/3/03 [illegible]

(F) Pin Shear, any direction
(2 shear areas)



$$\tau = \frac{P}{2A_{cs}}$$

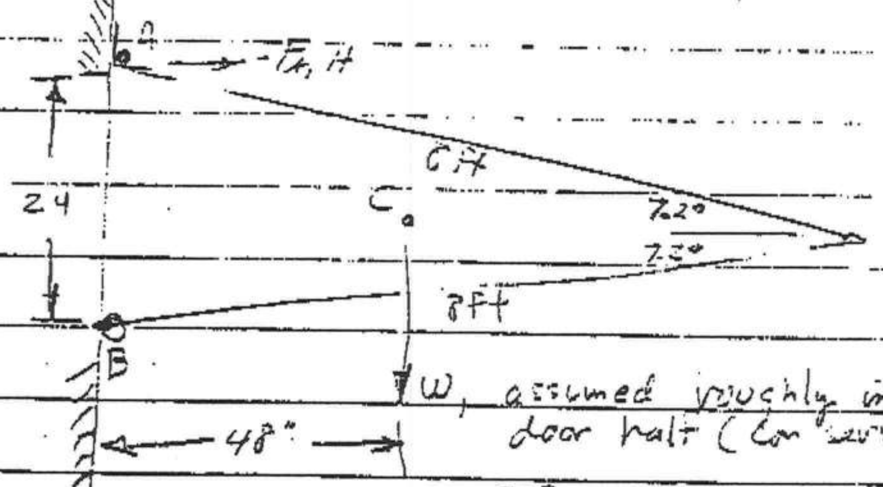
Shear yield strength = 42,000 psi / 2

$$P_{\text{to shear yield}} = S \times 2A$$

$$= 21{,}000 \text{ psi} \times 2 \times \frac{\pi}{4}(.5)^2$$

$$= \boxed{8247.16}$$

(G) Horizontal Force on Top Hinge



$$\Sigma M_o = 0 = W \times 48 - F_{A\text{-}H} \times 24$$

$$\Rightarrow F_{A,H} = W \times \frac{48}{24} \quad \text{or} \quad W \times \underline{\underline{2}}$$

multiplier

HI-FOLD DOOR CORPORATION
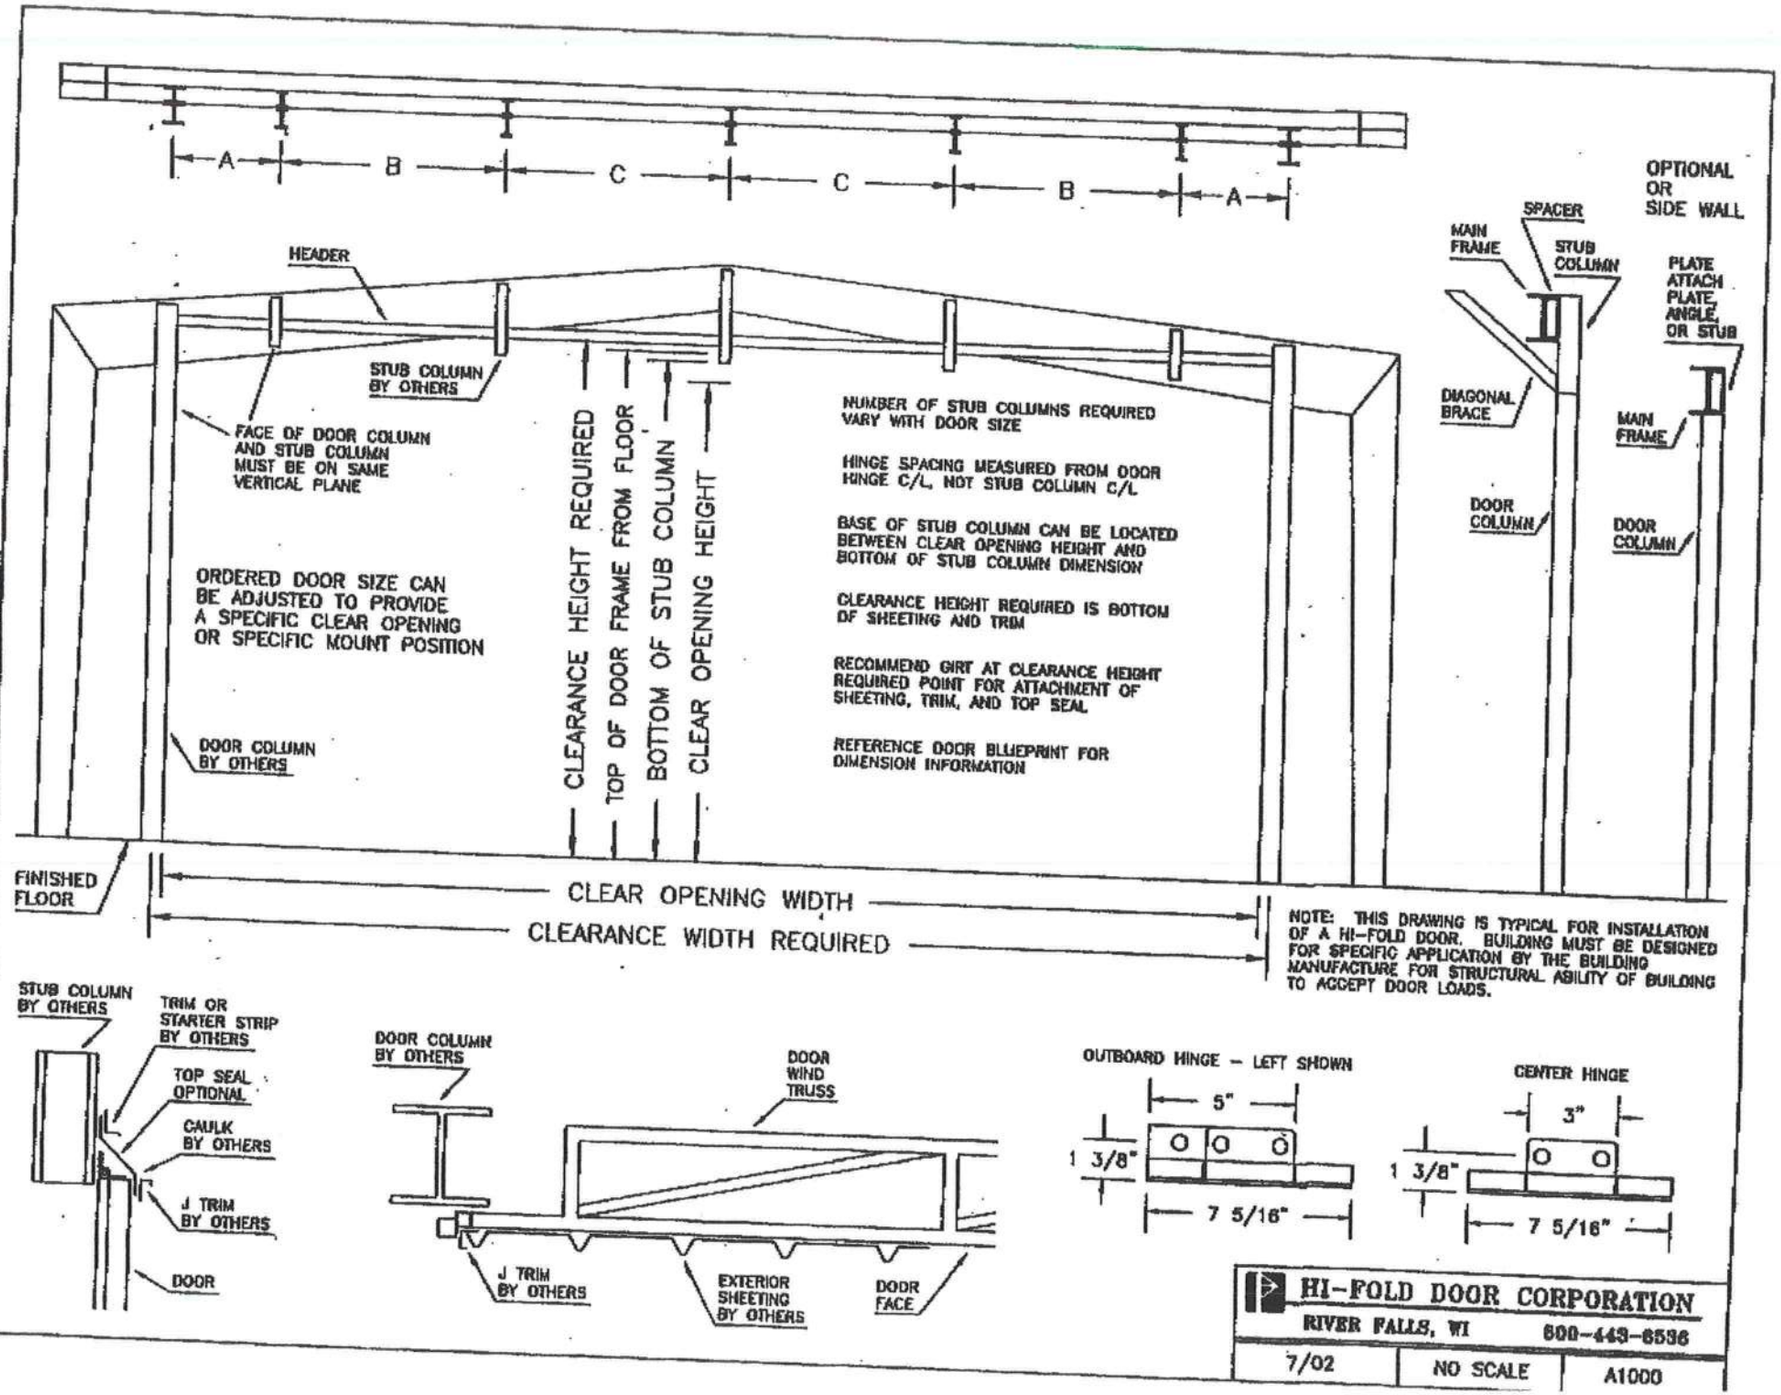
RIVER FALLS, WI 800-443-6536

6/01	NO SCALE	HF42W2-01



HI-FOLD DOOR CORPORATION
RIVER FALLS, WI 800-443-6536

7/02	NO SCALE	A1000

1. All doors shipped fully assembled. Units over 26' to 46' wide may require a vertical split. All doors over 48' must be vertically split. Units over 18' in height may require each half to be split horizontally. Vertically split doors to require field bolting, horizontally split doors to require field welding.
2. Doors over 46' wide supplied with 1.5 or 2 horsepower motor wired for 220 volt single phase and require separate circuit with circuit interrupt (provided by others) to protect the required 13 amps. Most doors 46' and under supplied with a 1 horsepower motor wired 110 volts and provided with individual circuit protection to protect the required 20 amps. "Up-Stop-Down" control wired 24 volts with cable long enough to place control five feet above floor on the side of door to be specified by customer. Flexible power cable 4' longer than height of door and requires service at that point. Hi-Fold electrical system meets the requirements of the National Electrical Code for typical applications hence it is the customers responsibility to provide instructions to meet special applications and local codes.
3. The electrical system requires a grounded circuit and substantial wiring. Extension cords and generators may not be adequate for door operation, and are not recommended.
4. Optional jamb reinforcement rails are available for wood or concrete jamb building applications.
5. Hi-Fold Door exerts considerable horizontal loads on the building structure in the open position. Loads specific to this application are provided to the purchaser. Purchaser is responsible to insure that the buildings structural design is capable of handling the imposed loads.
6. Operating times vary with door size. Contact Hi-Fold Door for operating speed for a particular size.
7. Purchaser required to inform Hi-Fold Door if any weight in addition to standard 26 gauge roll formed steel exterior covering (provided by others) is to be applied to and lifted by door operating system. Excessive weight will void warranty.
8. Hi-Fold Door is welded steel primed with a water base oxide primer and painted with black epoxy ester enamel and is not intended to by left exposed to the elements. In a highly corrosive atmosphere it may be necessary to field apply finish paint. Operating components must be checked frequently and properly lubricated as necessary.
9. Defective components will be replaced upon receipt of the defective component. Immediate replacement of defective components will be made by UPS or freight shipment on a COD basis with reimbursement upon return of the defective part following analysis and evaluation if deemed necessary by Hi-Fold Door.
10. Field alteration or repair of a door must be authorized in advance in writing. Unauthorized alteration will void warranty.
11. Hi-Fold is not responsible for the installation of the Hi-Fold Door, nor for installation errors or normal installation adjustments as might be required. Compliance with all applicable state and local codes is the sole responsibility of purchaser. Optional walk doors may not meet state or local life safety code requirements for exit doors.
12. Hi-Fold will attempt to answer any installation problem by phone. Factory service will be supplied when all field effort can not rectify the problem. Hi-Fold must be allowed reasonable time within which to travel to the job site. Abnormal cost incurred to answer demand for immediate service must be paid by purchaser. Purchaser must pay for total service cost if Hi-Fold is not found responsible for defect or defective operation.
13. Customer must thoroughly check shipments for damage. Significant damage is reason to refuse shipment of the product. Minor damage must be noted on the bill of lading and claim filed with the carrier. Hi-Fold is not responsible for freight damage. Neither Hi-Fold nor the trucking company can be held responsible for damage caused during unloading. Unloading is the responsibility of the purchaser. Shipment must be checked for road salt during winter months, if shipment comes in contact with salt it must be washed thoroughly prior to unloading truck and noted on the bill of lading.
14. Delivery to be accepted on confirmed delivery date. Any delay caused by purchaser shall require an additional amount paid to cause deposit to equal fifty percent of the order value.
15. Delivery delay exceeding 30 days caused by purchaser will require payment to equal 90 percent of order value and a storage fee may be imposed. Hi-Fold is not responsible for exposure deterioration caused by delivery delays in excess of 30 days
16. Delivery date to be confirmed when all components of the contract are received. Any change order must be received at least two weeks prior to confirmed delivery date.
17. Issuance of a purchase order alone is not adequate for door to be manufactured. This contract and size print must be signed and returned.
18. Cancellation policy: Once manufacturing has begun there will be no cancellations made. If cancellation is prior to manufacturing deposit will be returned in full, less any engineering that has been done.

NOTICE OF COMMENCEMENT FORM
COLUMBIA COUNTY, FLORIDA

THIS DOCUMENT MUST BE RECORDED AT THE COUNTY CLERKS OFFICE BEFORE YOUR FIRST INSPECTION.

THE UNDERSIGNED hereby gives notice that improvement will be made to certain real property, and in accordance with Chapter 713, Florida Statutes, the following information is provided in this Notice of Commencement.

Tax Parcel ID Number 13-4S-16-02952-201

1. **Description of property: (legal description of the property and street address or 911 address)** LOT 1 UNIT 1 SOUTHERN APPROACHES COLUMBIA COUNTY 115 SW BONANZA GLEN - COURT
2. **General description of improvement:** NEW HOUSE & HANGAR
3. **Owner Name & Address** HAROLD & CYNTHIA FRANKEL = 1703 SW SISTERS WELCOME RD. LAKE CITY. FL. 32025 **Interest in Property** —
4. **Name & Address of Fee Simple Owner (if other than owner):** —
5. **Contractor Name** OWNER CONTRACTOR **Phone Number** (386) 752-9592
   Address —
6. **Surety Holders Name** — Inst:200502186 Date:09/08/2005 Time:11:16
   Address — DC,P.DeWitt Cason,Columbia County B:1057 P:1591
   Amount of Bond —
7. **Lender Name** — **Phone Number:** —
   Address —
8. **Persons within the State of Florida designated by the Owner upon whom notices or other documents may be served as provided by section 718.13 (1)(a) 7; Florida Statutes:**
   Name — **Phone Number** —
   Address —
9. **In addition to himself/herself the owner designates** — **of** — **to receive a copy of the Lienor's Notice as provided in Section 713.13 (1) –**
   (a) 7. Phone Number of the designee —
10. **Expiration date of the Notice of Commencement (the expiration date is 1 (one) year from the date of recording, (Unless a different date is specified)** —

NOTICE AS PER CHAPTER 713, Florida Statutes:
The owner must sign the notice of commencement and no one else may be permitted to sign in his/her stead.

DISCLOSURE STATEMENT

FOR OWNER/BUILDER WHEN ACTING AS THER OWN CONTRACTOR AND CLAIMING EXEMPTION OF CONTRACTOR LICENSING REQUIREMENTS IN ACCORDANCE WITH FLORIDA STATUTES, ss. 489.103(7).

State law requires construction to be done by licensed contractors. You have applied for a permit under an exemption to that law. The exemption allows you, as the owner of your property, to act as your own contractor with certain restrictions even though you do not have a license. You must provide direct, onsite supervision of the construction yourself. You may build or improve a one-family or two-family residence or a farm outbuilding. You may also build or improve a commercial building, provided your costs do not exceed $25,000. The building or residence must be for your own use or occupancy. It may not be built or substantially improved for sale or lease. If you sell or lease a building you have built or substantially improved yourself within 1 year after the construction is complete, the law will presume that you built or substantially improved it for sale or lease, which is a violation of this exemption. You may not hire an unlicensed person to act as your contractor or to supervise people working on your building. It is your responsibility to make sure that people employed by you have licenses required by state law and by county or municipal licensing ordinances. You may not delegate the responsibility for supervising work to a licensed contractor who is not licensed to perform the work being done. Any person working on your building who is not licensed must work under your direct supervision and must be employed by you, which means that you must deduct F .I.C.A. and withholding tax and provide workers' compensation for that employee, all as prescribed by law. Your construction must comply with all applicable laws, ordinances, building codes, and zoning regulations.

TYPE OF CONSTRUCTION

( ) Single Family Dwelling
( ) Two-Family Residence
( ) Farm Outbuilding
(X) Other HANGER
( ) New Construction
( ) Addition, Alteration, Modification or other Improvement

NEW CONSTRUCTION OR IMPROVEMENT

I HAROLD J FRANKEL, have been advised of the above disclosure statement for exemption from contractor licensing as an owner/builder. I agree to comply with all requirements provided for in Florida Statutes ss.489.103(7) allowing this exception for the construction permitted by Columbia County Building Permit Number_____

Signature 11/21/05
Date

FOR BUILDING USE ONLY

I hereby certify that the above listed owner/builder has been notified of the disclosure statement in Florida Statutes ss 489.103(7).

Date 11-21-05 Building Official/Representative

From: The Columbia County Building Department
Plans Review
135 NE Hernando Av.
P. O Box 1529
Lake City Florida, 32056-1529

Reference to: Build permit application Number: 0511-77

Harold Frankel Owner/Builder lot 1 Unit 1 Southern Approaches

On the date of November 22, 2005 application 0511-77 and plans for construction of a residential aircraft hanger were reviewed and the following information or alteration to the plans will be required to continue processing this application. If you should have any question please contact the above address, or contact phone number (386) 758-1163 or fax any information to (386) 754-7088.

Please include application number 0511-77 when making reference to this application.

1. Please have Mr. Nicholas Geisler show on the plans a design detail for the interior 1 hour fire wall which will provide separation between the aircraft hanger area and the storage area.
2. Please submit product approval specification as required by Fla. Statute 553.842 and Fla. Administrative Code 9B-72 for all windows and doors which includes the hanger door that will be placed in the sheer walls of the hanger.
3. Please show compliance with the FBC-2004 section 412.3.1 residential aircraft hangars: An accessory building less than 2,000 square feet (186 m2) and 20 feet (6096 mm) in height, constructed on a one- or two-family residential property where aircraft are stored. Such use will be considered as a residential accessory use incidental to the dwelling. As shown on the floor plan submitted in

application 0511-77 the acceptable square footage of a residential aircraft hangar is exceed by 304 square feet.

4. Show the method of attachment of the hanger door and supports to the structure also include the method of attachment of these supports to the foundation. Provide the wind-load rating for the hanger door and all components of the hanger door.
5. Provide the manufacture specification and fire rating on the door which will be placed within the one hour fire rated wall.
6. If any penetration is made through the 1 hour fire wall, show the method to be used to maintain the firewall integrity.
7. Please provide a copy of the release, of the waste water disposal system from the Columbia County Environmental Department.
8. Please verify the requirement of Mr. Disosway grading plan for your property which stipulates that the first floor elevation of the hanger building to be elevated to 116.5 feet.

Thank you,

Joe Haltiwanger
Plan Examiner
Columbia County Building Department

#23927

The hanger next to Frankels house @ Cannon Creek Airpark is alledged not to meet wind load standards. Apparantly, the bolt patterns did not match and therefore were altered. Please check on this.

Dale

at request from Dale I made a Spotcheck at Mr. Frankel's Airplane Hanger. I Found that there we several Places where the Bolts in the Slab did not match the Main Steel Beam's holes. I spoke with Mr Frankel + he said that he would get his Engineer to approve the Alteration of the Bolts.

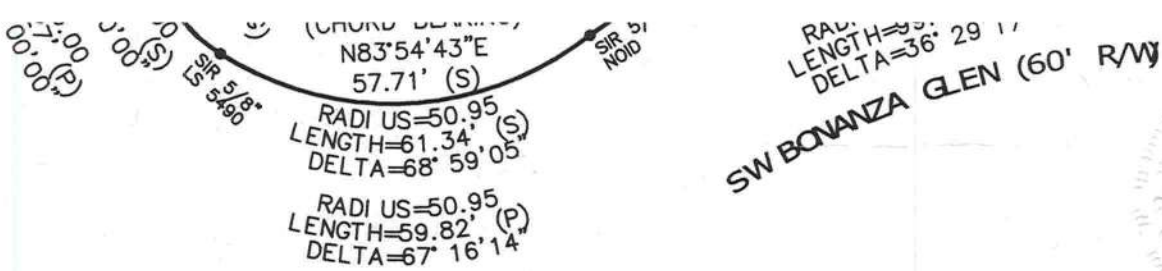
RE: HAROLD FRANKEL, METAL BUILDING
PERMIT Nr.: 23927

DEAR SIR:

PLEASE BE ADVISED THAT I HAVE INSPECTED THE ABOVE REFERENCED METAL BUILDING AND HAVE FOUND THAT IT IS CONSTRUCTED IN ACCORDANCE WITH THE ENGINEERED METAL BUILDING SHOP DRAWINGS AS PREPARED BY THE BUILDING'S MANUFACTURER. WHILE I HAVE NOT INSPECTED THE PROJECT DURING CONSTRUCTION, THE SLAB APPEARS TO BE IN GOOD CONDITION, WITH NO APPEARENT CRACKING OR SETTLEMENT.

SHOULD YOU HAVE ANY FURTHER QUESTIONS WITH THIS, PLEASE CALL FOR ASSISTANCE.

YOURS TRULY,
NICHOLAS PAUL GEISLER, ARCHITECT AR0007005



I HEREBY CERTIFY THIS SURVEY WAS DONE UNDER MY DIRECT SUPERVISION AND IT MEETS THE MINIMUM TECHNICAL STANDARDS FOR LAND SURVEYING PURSUANT TO CHAPTER 61G17-6, FLORIDA ADMINISTRATION CODE, CHAPTER 472, FLORIDA STATUES.

WILLIAM N. KITCHEN PSM 5490

William N. Kitchen

GENERAL NOTES

1. MATERIALS

	ASTM DESIGNATION	
STRUCTURAL STEEL PLATE	A529 OR A572 OR A570 OR A607	GRADE 50
COLD FORMED LIGHT GAGE SHAPES	A570 OR A607	GRADE 55
BRACE RODS	A572	GRADE 65, UNLESS NOTED
HOT ROLLED MILL SHAPES	A36 OR A572	FY= 36 KSI OR GRADE 50
ROOF AND WALL SHEETS	A653 OR A792	GRADE 50
BOLTS	A307, A325, AND A490	A307 UNLESS NOTED
BUILT-UP MEMBERS	A570	GRADE 50 OR 55

2. STRUCTURAL PRIMER

SHOP PRIMER PAINT IS A RUST INHIBITIVE PRIMER AND IT'S COLOR IS RED OXIDE. THIS PAINT IS NOT INTENDED FOR LONG TERM EXPOSURE TO THE ELEMENTS.

3. A325 BOLT TIGHTENING REQUIREMENTS

ALL HIGH STRENGTH BOLTS ARE A325-N UNLESS SPECIFICALLY NOTED OTHERWISE.

STRUCTURAL BOLTS SHALL BE TIGHTENED BY THE TURN-OF-THE-NUT METHOD IN ACCORDANCE WITH THE NINTH EDITION AISC "SPECIFICATION FOR STRUCTURAL JOINTS USING ASTM A325 OR A490 BOLTS". PER SECTION 8D.1, A325 BOLTSMAY BE INSTALLED WITHOUT WASHERS WHEN TIGHTENED BY THE TURN-OF-THE NUT METHOD.

ALL HIGH STRENGTH BOLTS, EXCEPT AS NOTED OTHERWISE, ARE SUBJECT TO DIRECT TENSION AND MAY REQUIRE INSPECTION AS DEFINED BY THE APPLICABLE BUILDING CODE OR STANDARD. IT IS THE RESPONSIBILITY OF THE ERECTOR TO ASSURE PROPER TIGHTNESS.

4. BUILDER/CONTRACTOR RESPONSIBILITIES

THE METAL BUILDING MANUF.'S STANDARD PRODUCT SPECIFICATIONS APPLY AND UNLESS STIPULATED OTHERWISE IN THE CONTRACT DOCUMENTS, THE METAL BUILDING MANUF.'S DESIGN, FABRICATION, QUALITY CRITERIA STANDARDS AND TOLERANCES WILL GOVERN THE WORK.

IN CASE OF DISCREPANCIES BETWEEN METAL BUILDINGS MANUF. STRUCTURAL PLANS AND PLANS FOR OTHER TRADES. THE METAL BUILDING MANUF.'S PLANS SHALL GOVERN.

IT IS THE RESPONSIBILITY OF THE BUILDER / CONTRACTOR TO OBTAIN APPROPRIATE APPROVALS AND NECESSARY PERMITS FROM CITY, COUNTY, STATE, OR FEDERAL AGENCIES, AS REQUIRED.

APPROVAL OF METAL BUILDING MANUF.'S DRAWINGS CONSTITUTES THE BUILDER / CONTRACTOR'S ACCEPTANCE OF THE METAL BUILDING MANUF.'S INTERPRETATION OF THE CONTRACT PURCHASE ORDER.

ONCE THE BUILDER / CONTRACTOR OR A/E FIRM HAS SIGNED MANUF.'S APPROVAL PACKAGE, CHANGES FROM THE PURCHASE ORDER BY THE BUILDER WILL BE BILLED TO THE BUILDER / CONTRACTOR FOR MATERIAL, ENGINEERING AND HANDLING FEES. SUCH CHANGES MAY CAUSE THE PROJECT TO BE MOVED FROM THE FABRICATION AND / OR SHIPPING SCHEDULE. A PENALTY FEE MAY BE CHARGED IF THE PROJECT MUST BE MOVED FROM THE FABRICATION AND / OR SHIPPING SCHEDULE, AS LONG AS THE MANUF.'S DESIGN AND DETAILING APPROACH COMPLIES WITH THE PURCHASE ORDER.

THE BUILDER / CONTRACTOR OR A/E FIRM ARE RESPONSIBLE FOR THE OVERALL PROJECT CONDITION. ALL INTERFACE AND COMPATIBILITY CONCERNING ANY MATERIALS NOT FURNISHED BY THE MANUF. ARE TO BE CONSIDERED AND COORDINATED BY THE BUILDER / CONTRACTOR OR A/E FIRM. UNLESS SPECIFIC DESIGN CRITERIA CONCERNING THIS INTERFACE BETWEEN MATERIALS IS FURNISHED AS PART OF THE PURCHASE ORDER. THE METAL BUILDING MANNUF.'S ASSUMPTIONS WILL GOVERN.

THE BUILDER / CONTRACTOR IS RESPONSIBLE TO INSURE THAT ALL OTHER PROJECT PLANS AND SPECIFICATIONS COMPLY WITH THE APPLICABLE REQUIREMENTS OF ANY GOVERNING BUILDING AUTHORITY. SUPPLYING SEALED ENGINEERING DESIGN DATA AND DRAWINGS BY THE BUILDING MANUF. DOES NOT IMPLY OR CONSTITUTE AN AGREEMENT THAT THE BUILDING MANUF. OR ITS DESIGN ENGINEER IS ACTING AS THE ENGINEER OF RECORD OR DESIGN PROFESSIONAL FOR THE CONSTRUCTION PROJECT. THESE DRAWINGS AND DESIGN DATA ARE SEALED AS TO THE STRUCTURAL SYSTEM FURNISHED BY THE METAL BUILDING MANUF. IN COMPLIANCE WITH ALL REQUIREMENTS OF THE PURCHASE ORDER.

THE BUILDER / CONTRACTOR IS RESPONSIBLE FOR SETTING OF ANCHOR BOLTS AND ERECTION OF STEEL BUILDING COMPONENTS IN ACCORDANCE WITH THE METAL BUILDING MANUF.'S "FOR CONSTRUCTION" DRAWINGS. TEMPORARY SUPPORTS OR BRACING REQUIRED FOR THE BUILDING ERECTION WILL BE THE RESPONSIBILITY OF THE ERECTOR TO DETERMINE, FURNISH, AND INSTALL.

THE METAL BUILDING MANUF. DOES NOT WARRANT STRUCTURAL INTEGRITY OF ANY COMPONENTS FIELD MODIFIED OR DESIGNED AND FABRICATED BY OTHERS. NEITHER DO WE ACCEPT DESIGN RESPONSIBILITY FOR THE EFFECTS NON STANDARD COMPONENTS DESIGNED BY OTHERS MAY HAVE ON THE SYSTEM IN GENERAL.

Protection of Opening

This building is located in a wind-borne debris region. Exterior glazing is assumed to be impact resistant and meet the provisions of the missile test, or they should be protected by impact resistant covering meeting the reqirements of SSTD 12, ASTM E 1886 and ASTME 1996 or Miami-Dade PA 201, 202, &203.
Openings may also be protected by structural wood panels having a min. thickness of 7/16" and maximum panel span of 8 feet. Attachment hardware and fastening schedule shall be in accordance with the following table.

WIND-BORNE DEBRIS PROTECTION FASTENING SCHEDULE
FOR WOOD STRUCTURAL PANELS (PLYWOOD)

FASTENER TYPE	FASTENER SPACING (in.) [1,2] PANEL SPAN ≤ 2ft	2ft< PANEL SPAN <4 ft.	4ft< PANEL SPAN <6 ft.	6ft< PANEL SPAN <8 ft.
2 1/2 #6 Wood Screw [3,5]	16	16	12	9
2 1/2 #8 Wood Screw [3]	16	16	16	12
Double-Headed nails [4]	12	6	4	3

SI: 1 inch=25.4 mm 1 foot=305 mm

Notes:

1.) This table is based on a maximum wind speed of 130 m.p.h. (58 m/s) and mean roof height of 33 feet (10 m) or less.
2.) Fasteners shall be installed at opposing ends of the wood structural panel.
3.) Where screws are attached to masonry or masonry/stucco, they shall be attached using vibration-resistant anchors having a minimum withdrawal capacity of 490 lb. (2180 kN).
4.) Nails shall be 10d common or 12d box double-headed nails.
5.) Where screws are attached to pre-engineered metal building components, i.e. Door Jambs, framed openings, etc., they shall be #12 self drilling screws secured to a minimum 16 ga. material. Screws should have a min. withdrawal strength of 500 lbs.

BUILDING CROSS SECTION

FOR FRAME LINE 3

GENERAL NOTES:

* NOTICE TO ERECTOR *

(A)It is IMPORTANT that for members exceeding 30 ft. in length that a spreader bar be used when lifting.

(B)ALL flange braces and wind bracing must be installed prior to exterior finishes being applied.
