THE WORLD'S BEST ROOF

XPS FANFOLD™
Extruded Polystyrene

DURO-LAST
THE WORLD'S BEST ROOF

If factory tabs are run **parallel** to the board, a fastener in each corner and 48" on center, max, will be required.
(See drawing A)

If factory tabs are run perpendicular to the board, a fastener in each corner is required. (See drawing B)

When fastening insulation or slip sheets, install fasteners flush with top surface of the insulation being careful not to break the face or crush the insulation.

NOTE: Assembly "B" is not allowed for use with the 10' tab system.
