POCKET PENETROMETER TEST

The pocket penetrometer tests are rounded down to 1500 psf or check here to declare 1000 lb. soil without testing.

X 1500 X 1500 X 1500

POCKET PENETROMETER TESTING METHOD

1. Test the perimeter of the home at 6 locations.
2. Take the reading at the depth of the footer.
3. Using 500 lb. increments, take the lowest reading and round down to that increment.

X 1500 X 1500 X 1500

TORQUE PROBE TEST

The results of the torque probe test is 290 inch pounds or check here if you are declaring 5" anchors without testing . A test showing 275 inch pounds or less will require 4 foot anchors.

Note: A state approved lateral arm system is being used and 4 ft. anchors are allowed at the sidewall locations. I understand 5 ft anchors are required at all centerline tie points where the torque test reading is 275 or less and where the mobile home manufacturer may requires anchors with 4000 lb holding capacity.

MS Installer's initials

ALL TESTS MUST BE PERFORMED BY A LICENSED INSTALLER

Installer Name

Melvin Sheppard

Date Tested

6-21-05

Electrical

Connect electrical conductors between multi-wide units, but not to the main power source. This includes the bonding wire between multi-wide units. Pg. 28

Plumbing

Connect all sewer drains to an existing sewer tap or septic tank. Pg. 29

Connect all potable water supply piping to an existing water meter, water tap, or other independent water supply systems. Pg. 28

Site Preparation

Debris and organic material removed ☒ Swale ☒ Pad ☐ Other ☐

Fastening multi wide units

Floor: Type Fastener: lags Length: 5" Spacing: 16" OC
Walls: Type Fastener: screws Length: 4" Spacing: 16" OC
Roof: Type Fastener: lags Length: 6" Spacing: 16" OC

For used homes a min. 30 gauge, 8" wide, galvanized metal strip will be centered over the peak of the roof and fastened with galv. roofing nails at 2" on center on both sides of the centerline.

Gasket (weatherproofing requirement)

I understand a properly installed gasket is a requirement of all new and used homes and that condensation, mold, mildew and buckled marriage walls are a result of a poorly installed or no gasket being installed. I understand a strip of tape will not serve as a gasket.

SECTION 4 – MULTI WIDE INSTALLATION

NOTES:

- 1.) The above detail is meant to be typical. For model specific pier locations, perimeter blocking requirements (if applicable), refer to the DATA PLATE and pier plans supplied with the home.
- 2.) Pier spacing is based on each section's floor width, I-beam spacing and Roof Load Zone and soil bearing capacity. Refer to applicable tables in this manual.
- 3.) For piers required at sidewall for openings larger than 4'-0", use a minimum 16x16x4 footer or equivalent.
- 4.) To determine the locations of centerline columns and the associated loads with these locations, refer to the model specific pier- or floor plan, included with this manual. If a specific pier- or floor plan has not been provided, use the column span tables in Section 3. If not already identified on the perimeter joist at the marriage line, mark these locations on the bottom of the interior perimeter joist with a nail or light color chalk or paint, so that they can be easily visible under the home after the sections are put together. Use the FOOTING CAPACITY table in Section 3 to determine the correct footing size for the associated load at the marriage line. **EXAMPLE:** A 14-wide section without perimeter blocking may, per print, have a 4000 lbs. column load at the marriage line. If the soil capacity at the installation site is 2000 PSF, in the FOOTING CAPACITY table read down the 2000 lbs. column until the footing capacity meets or exceeds the 4000 lb. load. The associated footing size in this example is an 18" x 18" x 4" footing (4192lbs). If the soil bearing capacity were 2500 lbs. or higher, a 16" x 16" x 4" footing would be sufficient at the 4000 lbs. column condition.
