THE CONTRACTOR SHALL EXERCISE CAUTION WHEN CROSSING AN UNDERGROND UTILITY, WHETHER SHOWN ON THE PLANS OR LOCATED BY THE UTILITY COMPANY. ALL UTILITIES THAT INTERFERE WITH THE PROPOSED CONSTRUCTION SHALL BE RELOCATED BY THE RESPECTIVE UTILITY COMPANY AND THE CONTRACTOR SHALL COOPERATE WITH THEM DRING RELOCATION OPERATIONS. ANY DELAY OR INCONVENIENCE CAUSED TO THE CONTRATOR BY THE RELOCATION OF VARIOUS UTILITIES SHALL BE INCIDENTAL TO THE CONTRACT, AND NO EXTRA COMPENSATION WILL BE ALLOWED.

EROSION CONTROL

EROSION AND SILTATION CONTROL MEASURES ARE TO BE PROVIDED AND INSTALLED PRIOR TO COMMENCEMENT OF CONSTRUCTION. THESE MEASURES ARE TO BE INSPECTED BY THE CONTRACTOR ON A REGULAR BASIS AND ARE TO BE MAINTAINED OR REPAIRED ON AN IMMEDIATE BASIS, AS REQUIRED. REFER TO WATER MANAGEMENT DISTRICT PERMIT FOR ADDITIONAL REQUIREMENTS FOR EROSION CONTROL AND SURFACE DRAINAGE.

LIMITS OF DISTURBANCE

AT NO TIME SHALL THE CONTRACTOR DISTURB SURROUNDING PROPERTIES OR TRAVEL ON SURROUNDING PROPERTIES WITHOUT WRITTEN CONSENT FROM THE PROPERTY OWNER. REPAIR OR RECONSTRUCTION OF DAMAGED AREAS ON SURROUNDING PROPERTIES SHALL BE PERFORMED BY THE CONTRACTOR ON AN IMMEDIATE BASIS. ALL COSTS FOR REPAIRS SHALL BE THE RESPONSIBILITY OF THE CONTRACTOR AND NO EXTRA COMPENSATION SHALL BE PROVIDED.

STEEL COATING RECOMMENDATIONS IN PRESSURE TREATED WOOD:

- Thicker galvanizing generally extends service life of a product. The treated wood industry recommends use of Stainless Steel and hot-dip galvanized connectors and fasteners with treated wood.
- Due to the uncertainties, which are out of the specifiers control, in regard to the chemicals used in pressure treated wood, Simpson recommends the use of stainless steel fasteners, anchors and connectors with treated wood when possible. At a minimum, customers should use ZMAX (G185 HDG per ASTM A653), Batch/Post Hot-Dip Galvanized (per ASTM A123 for connectors and ASTM A153 for fasteners), or mechanically galvanized fasteners (per ASTM B695, Class 55 or greater), product with the newer alternative treated woods.
- G60 galvanized products should not be used with treated woods.
- G90 galvanized connectors can be used with Sodium Borate (DOT - Disodium Octaborate Tetrahydrate) treated woods. Sodium Borate Treated woods are not suitable for applications where moisture exposure is likely. They are suitable for mudsill applications when transported, stored, and installed appropriately.
- When using stainless steel or hot-dip galvanized connectors, the connectors and fasteners should be made of the same material.

(TABLE 305S1 SSTD10-99)

RULES:
1. One all-thread rod at each corner.
2. One all-thread rod at 48" o.c.
3. One all-thread rod at each end of opening headers
4. Check sub-sheathing to top plate connection for horizontal trafer capability.
5. If necessary, add all-thread rods to girders individually to excite the from average uplift plf.
6. Check sole plate to slab connection, additional anchors may I required for lateral and shear load transfer.

ALLOWABLE VALUES

Foundation / Spruce-Pine-Fir Top Plate	3840 lb
Lintel or Bond Beam / S.Y.P. Top Plate	3840 lb
Lintel or Bond Beam / Spruce-Pine-Fir Top Plate	3840 lb

Placement at slab level:

Corners
When presetting the all-thread rod at a building corner, the ro should be placed 8 to 12 inches away from the corner so it do not set under the corner framing members. When a all-thread rod ispecified at a building corner, it may be placed on either side of the corner

Header ends
When presetting the all-thread rod at a header end, the rod should be placed 8 to 12 inches away from the header end sit does not fall under the stud pack framing members.

Top Connections
Top connections made at corners and header ends shall be mte within 2 inches of the framing pack. A nut and 3X3 washer shall be allied to the top plates and tightened securely.

Intermediate Coupler Connections
When using the rod coupler, care should be taken to ensure fi and equal thread engagement. This is easily achieved by threadinthe coupler all the way onto the rod, then standing the two rods ento end, then threading the coupler back over the rod joint so each rod halfway into the coupler.

Retro-fits
In the case of an all thread rod misplacement, the rod may be xoxied into the concrete.

Sole plate to slab connection:
The slab level sole plate shall be connected to the slab with th connectors specified and at the spacing specified within the degn documents. All-thread rods shall be placed as per the design ecifications. All-thread rods with a nut and washer at the sole plate will quay as a sole plate connection but may require other anchors intermediate ohe all-thread rod locations to qualify the specified spacing requirements.

System Tightening:
On multiple story applications, the all-thread rod system shall I rechecked for proper tension just before the walls are veneered. This will low the all-thread rod system to compensate for the buildings dead loacompression.
