Greenfiber® provides outstanding thermal performance, fire-resistance and sound control. Consisting of up to 85% recycled content, Greenfiber® insulation is specially treated for flame resistance. R-value means resistance to heat flow - the higher the R-value, the greater the insulation power.

This insulation has been installed in conformance with the above recommendations, to provide a value of R- 38 using 84 bags of this insulation to cover 1585 square feet of area.

LOOSE-FILL APPLICATIONS

The above coverage chart is based on a nominal bag weight of 25 lbs using a volumetric 3'x3'x4' gear and 4' gate. The chart is based on settled thickness and is for estimating purposes only.

The above coverage chart is based on settled thickness and is for estimating purposes only. DO NOT EXCEED MAXIMUM SQUARE FEET COVERAGE PER BAG. THE APPLICATOR MUST INSTALL BOTH THE MINIMUM NUMBER OF BAGS PER 1000 SQ. FT. AND THE MINIMUM INSTALLED THICKNESS TO ENSURE THE STATED R-VALUE HAS BEEN REACHED. FAILURE TO MEET BOTH THESE REQUIREMENTS MAY PREVENT THE APPLICATION OF SPECIFIED R-VALUE. THE INSTALLED MOISTURE CONTENT MUST BE BETWEEN 10% AND 25%

IN ALL APPLICATIONS. Job conditions, application techniques, equipment, and settings can influence actual coverage. Minimum net weight is 23.75 lbs.

DENSE-PACK APPLICATION

This coverage chart is for dry applications only and is based on the Kodalite III, 24' gear 6" gate. The installed moisture content must be between 25% and 35% as measured by a hand held moisture meter. Do not cover the insulation until the insulation moisture content is measured and documented after a minimum period of 24 hrs from the time of insulation application. Insulation must be 25% or less in accordance with Greenther's WalSpray Manual. Install dry dense pack. Specialty insulation in all exterior wall sections were applied vapor impermeable, such as cabinets, mirrors, tubs, and shower enclosures located. If unsure where impermeable is located, dry dense pack the entire exterior wall section(s). Non-standard or unusual wall configurations (i.e. other than 2x4 and 2x8 walls) can affect thermal and vapor properties, and require special installation considerations. Technical representation for applications or framing that is not included on these charts.

LOOSE-FILL APPLICATIONS			
Tabla de Cobertura Lateral y del Piso - Aplicaciones de Paquete Denso			
DENSE-PACK APPLICATION			
SUMMARY			
The above coverage chart is based on a nominal bag weight of 25 lbs using a volumetric 1/3rd fill and 6" gate. The chart is based on settled thickness and is for estimating purposes only. Do not exceed maximum square foot coverage per bag. The applicator must install both the minimum number of bags per 1000 sq. ft. and the minimum installed thickness to ensure the stated R-value has been reached. Failure to meet these requirements may prevent the application of specified R-value. The installed moisture content must be between 10% and 25% relative humidity. Application techniques, equipment and settings can influence actual coverage. Minimum net weight is 23.75 lbs.			

THE ABOVE COVERAGE CHART IS BASED ON A NOMINAL BAG WEIGHT OF 25 LBS USING A VOLUMETRIC 1/3RD FILL GATE AND 6" GATE. THE CHART IS BASED ON SETTLED THICKNESS AND IS FOR ESTIMATING PURPOSES ONLY. DO NOT EXCEED MAXIMUM SQUARE FOOT COVERAGE PER BAG. THE APPLICATOR MUST INSTALL BOTH THE MINIMUM NUMBER OF BAGS PER 1000 SQ. FT. AND THE MINIMUM INSTALLED THICKNESS TO ENSURE THE STATED R-VALUE HAS BEEN REACHED. FAILURE TO MEET THESE REQUIREMENTS MAY PREVENT THE APPLICATION OF SPECIFIED R-VALUE. THE INSTALLED MOISTURE CONTENT MUST BE BETWEEN 10% AND 25% RELATIVE HUMIDITY. APPLICATION TECHNIQUES, EQUIPMENT AND SETTINGS CAN INFLUENCE ACTUAL COVERAGE. MINIMUM NET WEIGHT IS 23.75 LBS.

STABILIZED APPLICATIONS
