POCKET PENETROMETER TEST

The pocket penetrometer tests are rounded down to _____ psf or check here to declare 1000 lb. soil ☒ without testing.

X 10 X 10 X 10

POCKET PENETROMETER TESTING METHOD

1. Test the perimeter of the home at 6 locations.
2. Take the reading at the depth of the footer.
3. Using 500 lb. increments, take the lowest reading and round down to that increment.

X 10 X 10 X 10

TORQUE PROBE TEST

The results of the torque probe test is 114 lbs/ft inch pounds or check here if you are declaring 5' anchors without testing. A test showing 275 inch pounds or less will require 5 foot anchors.

Note: A state approved lateral arm system is being used and 4 ft. anchors are allowed at the sidewall locations. I understand 5 ft. anchors are required at all centerline tie points where the torque test reading is 275 or less and where the mobile home manufacturer may require anchors with 4000 lb. holding capacity.

SITE PLAN EXAMPLE / WORKSHEET

Use this example to draw your own site plan. Show all existing buildings and any other homes on this property and show the distances between them, Also show where the roads or roads are around the property. This site plan can also be used for the 911 Addressing department if you include the distance from the driveway to the nearest property line.

MOBILE HOME INSTALLATION SUBCONTRACTOR VERIFICATION FORM

APPLICATION NUMBER _____ CONTRACTOR _____ PHONE _____

THIS FORM MUST BE SUBMITTED PRIOR TO THE ISSUANCE OF A PERMIT

In Columbia County one permit will cover all trades doing work at the permitted site. It is **REQUIRED** that we have records of the subcontractors who actually did the trade specific work under the permit. Per Florida Statute 440 and Ordinance 89-6, a contractor shall require all subcontractors to provide evidence of workers' compensation or exemption, general liability insurance and a valid Certificate of Competency license in Columbia County.

Any changes, the permitted contractor is responsible for the corrected form being submitted to this office prior to the start of that subcontractor beginning any work. Violations will result in stop work orders and/or fines.

WARRANTY DEED

THIS INDENTURE, made this 3rd day of April, 2012, between RODNEY S. DICKS and his wife NORMA R. DICKS, whose address is 545 SE Rodney Dicks Drive, Lake City, Florida 32025, Grantor, and ALLEN L. GLAZIER and his wife KIM L. PERKINS, whose address is 10421 Loyola Drive, Jacksonville, Florida 32218, Grantees,

W I T N E S S E T H:

That Grantors, for and in consideration of the sum of TEN AND NO/100 (\$10.00) DOLLARS and other valuable consideration to Grantors in hand paid by Grantees, the receipt whereof is hereby acknowledged, have granted, bargained and sold to Grantees, and Grantees' heirs, successors and assigns forever, the following described land lying in COLUMBIA County, Florida:

SEE SCHEDULE A ATTACHED HERETO.

(Tax parcel number 07-5S-17-03487-001)

SUBJECT TO: Real estate taxes for 2012 and subsequent years; restrictions and easements of record; and easements shown by a plat of the property.

Grantors do hereby fully warrant the title to said land and will defend the same against the lawful claims of all persons whomsoever.

IN WITNESS WHEREOF, Grantors have hereunto set their hands and seals the day above first written.

Signed, sealed and delivered
in the presence of:

Eddie M. Anderson

Addressing Maintenance

To maintain the Countywide Addressing Policy you must make application for a 9-1-1 Address at the time you apply for a building permit. The established standards for assigning and posting numbers to all principal buildings, dwellings, businesses and industries are contained in Columbia County Ordinance 2001-9. The addressing system is to enable Emergency Service Agencies to locate you in an emergency, and to assist the United States Postal Service and the public in the timely and efficient provision of services to residents and businesses of Columbia County.

HOME CONSTRUCTED FOR: ☒ Zone I ☒ Zone II ☐ Zone III

This home has not been designed for the higher wind pressure and anchoring provisions required for coastal areas and should not be located within 1500' of the coastline in Wind Zones II and III, unless the home and its anchoring and foundation systems have been designed for the increased requirements specified in Exposure D in ASCE 7-88.

This home has not been equipped with storm shutters or other protective coverings for windows and exterior door openings. For homes designed to be located in Wind Zones II and III, which have not been provided with shutters or equivalent covering devices, it is strongly recommended that the home be made ready to be equipped with these devices in accordance with the method recommended in manufacturer's printed instructions.

BASIC WIND ZONE MAP

DESIGN ROOF LOAD ZONE MAP

FILE COPY

This manufactured home has been thermally insulated to conform with the requirements of the federal manufactured home construction and safety standards for all locations with UO value zone 1.

Heating equipment manufacturer and model (see list at left):
The above heating equipment has the capacity to maintain an average 70° F temperature in this home at outdoor temperatures of 12° F.

To maximize furnace operating economy, and to conserve energy, it is recommended that this home be installed where the outdoor winter design temperature (97 (1/2)° F) is not higher than 32° F (zero Fahrenheit).
The above information has been calculated assuming a maximum wind velocity of 10 mph at standard atmospheric pressure.

COMFORT COOLING

☐ Air conditioner provided at factory (Alternative I)

Air conditioner manufacturer and model (see list at left):

Rated capacity: 8,750 Btu/hr in accordance with the appropriate air conditioning and refrigeration institute standards.
The central air conditioning system provided in this home has been sized ensuring an

orientation of the front (facing) end of the home facing On this basis the system is designed to maintain an indoor temperature of 75° F when outdoor

temperatures are° F dry bulb and° F wet bulb.

The temperature to which this home can be cooled will change depending upon the amount of exposure of the windows of this home to the sun's radiant heat. Therefore, the home's heat gains will vary dependent upon its orientation to the sun and any permanent shading provided. Information concerning the calculation of cooling loads at various locations, window exposures and shadings are provided in Chapter 22 of the 1989 edition of the ASHRAE Handbook of Fundamentals.

Information necessary to calculate cooling loads at various locations and orientations is provided in the special comfort cooling information provided with this home.

☒ Air conditioner not provided at factory (Alternative II)

The air distribution system of this home is suitable for the installation of central air conditioning.

The supply air distribution system installed in this home is sized for a manufactured home

central air conditioning system of up to 29,200 Btu/h, rated capacity which is permitted in accordance with the appropriate air conditioning and refrigeration institute standards, when the air circulation of such air conditioners are rated at 0.5 inch water column static pressure or greater for the cooling air delivered to the manufactured home supply air duct system.

Information necessary to calculate cooling loads at various locations and orientations is provided in the special comfort cooling information provided with this manufactured home.

☐ Air conditioning not recommended (Alternative III)

The air distribution system of this home has not been designed in anticipation of its use with a central air conditioning system.

To determine the required capacity of equipment to cool a home efficiently and economically, a cooling load (heat gain) calculation is required. The cooling load is dependent on the orientation, location and the structure of the home. Central air conditioners operate most efficiently and provide the greatest comfort when their capacity closely approximates the calculated cooling load. Each home's air conditioner should be sized in accordance with Chapter 22 of the American Society of Heating, Refrigerating and Air-Conditioning Engineers (ASHRAE) Handbook of Fundamentals 1989 edition, once the location and orientation are known.
