### NOTICE OF COMMENCEMENT

STATE OF FLORIDA  
COUNTY OF COLUMBIA

THE UNDERSIGNED hereby gives notice that improvement will be made to certain real property, and in accordance with Chapter 713.13, Florida Statutes, the following information is provided in this Notice of Commencement. This Notice shall be void and of no force and effect if construction is not commenced within ninety (90) days after recordation.

1. Description of property: (Legal description of property, and street address if available)

LOT 32, SHILOH RIDGE UNREC.,  
LOT 32, SHILOH RIDGE, AN UNRECORDED SUBDIVISION,  
MORE PARTICULARLY DESCRIBED AS FOLLOWS:

SEE EXHIBIT "A" ATTACHED HERETO AND MADE A PART HEREOF

2. General description of improvement: construction of single family dwelling

3. Owner information:

- a. Name and address:  
JOHN M. BROWN and LINDA M. BROWN  
12945 TANGERINE BLVD., WEST PALM BEACH, FL 33412
- b. Interest in property: Fee Simple
- c. Name and Address of Fee Simple Titleholder (if other than owner).

4. Contractor: (Name and Address)

America's Home Place  
3101 SW 34th Ave., Ocala, FL 34474  
Telephone Number: 352-873-2411

5. Surety (if any):

- a. Name and Address:  
Telephone Number: \_\_\_\_\_
- b. Amount of Bond \$ \_\_\_\_\_

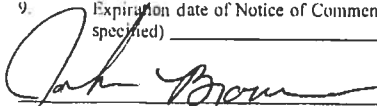

6. Lender: (Name and Address)

SUNTRUST MORTGAGE INC. A VIRGINIA CORP.  
350 N LAKE DESTINY ROAD, MAITLAND, FL 32751  
Telephone Number: \_\_\_\_\_

7. Persons within the State of Florida designated by Owner upon whom notice or other documents may be served as provided by Section 713.13(1)(a)7., Florida Statutes: (Name and Address)  
N/A

8. In addition to himself, Owner designates the following person(s) to receive a copy of the Lienor's Notice as provided in Section 713.13(1)(b), Florida Statutes: (Name and Address)  
SUNTRUST MORTGAGE INC. A VIRGINIA CORP.  
350 N LAKE DESTINY ROAD, MAITLAND, FL 32751  
Telephone Number: \_\_\_\_\_

9. Expiration date of Notice of Commencement (the expiration date is 1 year from the date of recording unless a different date is specified) \_\_\_\_\_

I certify that this home has complied with the Florida Energy Efficiency Code For Building Construction through the above energy saving features which will be installed (or exceeded) in this home before final inspection. Otherwise, a new EPL Display Card will be completed based on installed Code compliant features.

Builder Signature: Jeffrey Gump

Date: 12-19-06

Address of New Home: 350 Cumberland St City/FL Zip: Ft. White, FL

*\*NOTE: The home's estimated energy performance score is only available through the FLA/RES computer program. This is not a Building Energy Rating. If your score is 80 or greater (or 86 for a US EPA/DOE EnergyStar™ designation), your home may qualify for energy efficiency mortgage (EEM) incentives if you obtain a Florida Energy Gauge Rating. Contact the Energy Gauge Hotline at 321/638-1492 or see the Energy Gauge web site at www.fsec.ucf.edu for information and a list of certified Raters. For information about Florida's Energy Efficiency Code For Building Construction, contact the Department of Community Affairs at 850/487-1824.*

THIS INDENTURE made June 30, 2005, JK DC, P. Dewitt Cason, Columbia County B:1053 F:1049

BETWEEN Cecilio Roldan and Lillian Roldan, husband and wife, whose post office address is ~~1500~~  
SW Cumberland Street, Ft. White, Florida, 32038, herein called Grantor, and

John M. Brown and Linda M. Brown, husband and wife, whose post office address is 12945  
Tangerine Blvd, West Palm Beach, Florida, 33412, herein called Grantee,

Witnesseth that said grantor, for and in consideration of the sum of TEN AND NO/100  
(\$10.00) Dollars, and other good and valuable considerations to said grantor in hand paid by said  
grantee, the receipt whereof is hereby acknowledged, has granted, bargained and sold to the said  
grantee, and grantee's heirs and assigns forever, the following described land, situate, lying and  
being in the county(ies) of Columbia state of Florida, to wit:

Lot 32 Shiloh Ridge

Commence at the Southeast corner of the Northwest 1/4 of the Southeast 1/4; Section 15, Township  
7 South, Range 16 East, Columbia County, Florida, and run thence South 89 deg. 05 min. 46 sec.  
West along the South line of said Northwest 1/4 of the Southeast 1/4, 1005.02 feet to the Southeast  
corner of said lot and to the Point of Beginning; thence continue South 89 deg. 05 min. 46 sec.  
West along said South line, 320.02 feet to the Southwest corner of said Northwest 1/4 of the  
Southeast 1/4; thence continue South 89 deg. 05 min. 46 sec. West along the South line of the  
North 1/2 of the Southwest 1/4, 14.06 feet; thence North 00 deg. 47 min. 23 sec. West, 1324.61  
feet; thence North 89 deg. 03 min. 48 sec. East, 330.81 feet; thence South 00 deg. 55 min. 54 sec.  
East, 1324.80 feet to the Point of Beginning. The North 30 feet of said lands being subject to an  
easement for ingress and egress.

Together with an easement for ingress and egress over and across the following described property:

60 foot road easement

A strip of land 60 feet in width being 30 feet each side of a centerline described as follows:

Commence at the Southeast corner of the Southwest 1/4 of the Northeast 1/4, Section 15, Township  
6 South, Range 16 East, Columbia County, Florida and run thence South 89 deg. 03 min. 48 sec.  
West, 20.45 feet to the West line of Fry Road and to the Point of Beginning; thence continue South  
89 deg. 03 min. 48 sec. West, 1976.52 feet to Reference Point "A"; thence continue South 89 deg.  
03 min. 48 sec. West, 1317.40 feet to Reference Point "B"; thence continue South 89 deg. 03 min.  
48 sec. West, 659.08 feet to the Point of Termination. Also begin at Reference Point "A" and run  
thence North 00 deg. 47 min. 23 sec. West, 1324.16 feet; thence North 00 deg. 12 min. 04 sec.  
East, 662.25 feet; thence North 00 deg. 47 min. 23 sec. West, 40.00 feet to the Centerpoint of a cul-  
de-sac having a radius of 50 feet and to the Point of Termination. Also begin at Reference Point  
"A" and run thence South 00 deg. 47 min. 23 sec. East, 702.12 feet to the Centerpoint of a cul-  
de-sac having a radius of 50 feet and to the Point of Termination. Also begin at Reference Point "B"  
and run thence North 00 deg. 44 min. 30 sec. West, 1323.37 feet; thence North 00 deg. 30 min. 31  
sec. West, 701.80 feet to the Centerpoint of a cul-de-sac having a radius of 50 feet and to the Point  
of Termination. Also begin at Reference Point "B" and run thence South 00 deg. 44 min. 30 sec.  
East, 701.74 feet to the Centerpoint of a cul-de-sac having a radius of 50 feet and to the Point of  
Termination. JK

AND SAID GRANTOR does hereby fully warrant the title to said land, and will defend the same  
against the lawful claims of all persons whomsoever.

Grantor and grantee are used for singular or plural, as context requires.

STATE OF FLORIDA, COUNTY OF COLUMBIA

To: Building Department  
Subject: Field Revisions  
Project: Brown Residence

#25957

Dear Building Official:

In lieu of the original plan specifications, we have reviewed the subject / project and approve of the following:

1. Mono footing per attached detail.

If you have any questions please call me at the Winter Park office.

Thank you,

J. Lee Smith  
FL PE# 36177

STATEMENT

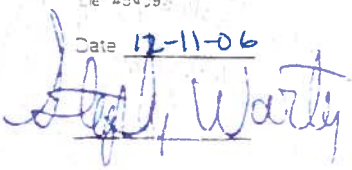

I certify that the engineering for the truss listed on the attached index sheets have been designed and checked for compliance with the Standard Building code 1997 and FBC2004 using Mitek Engineering software. The truss system has been designed to provide adequate resistance to wind load and forces as required by one of the following provisions

|   |                        |      |
|---|------------------------|------|
| Design Criteria                                   | Root                   |      |
| <input checked="" type="checkbox"/> ASCE 7-02 120 | Top chord live load    | 20.0 |
| Exposure B  | Top chord dead load    | 10.0 |
| Engineer Stephen W. Warty                         | Bottom chord live load | 10.0 |
| Address 4922 Dyer Blvd                            | Bottom chord dead load | 10.0 |
| West Palm Beach FL 33407                          | Duration factor        | 1.25 |

This is an index sheet submitted in accordance with the Department of Professional Engineering Tallahassee FL. Engineering sheets are Photocopies of the original design and approved by me

- NOTES**
- 2-ply truss to be connected together with 10d (0.148"x3") nails as follows:  
 Top chords connected as follows: 2 X 4 - 1 row at 0-9-0 oc, 2 X 6 - 2 rows at 0-9-0 oc.  
 Bottom chords connected as follows: 2 X 8 - 2 rows at 0-9-0 oc.  
 Webs connected as follows: 2 X 4 - 1 row at 0-9-0 oc, Except member 11-10 2 X 4 - 1 row at 0-3-0 oc.
  - All loads are considered equally applied to all plies, except if noted as front (F) or back (B) face in the LOAD CASE(S) section. Ply to ply connections have been provided to distribute only loads noted as (F) or (B), unless otherwise indicated.
  - Unbalanced roof live loads have been considered for this design.
  - Wind: ASCE 7-02; 120mph (3-second gust); h=15ft; TCCL=5.0psf; BCDL=5.0psf; Category II; Exp B; enclosed; MWFRS gable end zone; cantilever left and right exposed; end vertical left and right exposed. Lumber DOL=1.25 plate grip DOL=1.00.
  - 200.0lb AC unit load placed on the top chord, 15-0-0 from left end, supported at two points, 5-0-0 apart.
  - Provide adequate drainage to prevent water ponding.
  - This truss has been designed for a 10.0 psf bottom chord live load nonconcurrent with any other live loads.
  - As requested, plates have not been designed to provide for placement tolerances or rough handling and erection conditions. It is the responsibility of the fabricator to increase plate sizes to account for these factors.
  - All plates are MT20 plates unless otherwise indicated.
  - This truss requires plate inspection per the Tooth Count Method when this truss is chosen for quality assurance inspection.
  - Provide mechanical connection (by others) of truss to bearing plate capable of withstanding 792 lb uplift at joint 2, 1449 lb uplift at joint 18, 352 lb uplift at joint 16 and 130 lb uplift at joint 22.
  - Load case(s) 1, 2, 3, 4, 5, 6, 7, 8, 9, 10 has/have been modified. Building designer must review loads to verify that they are correct for the intended use of this truss.
  - Girder carries tie-in span(s): 4-6-0 from 6-8-4 to 25-8-8; 4-6-0 from 20-5-0 to 25-8-8
  - Design assumes 4x2 (flat orientation) purlins at oc spacing indicated, fastened to truss TC w/ 2-10d nails.
  - Hanger(s) or other connection device(s) shall be provided sufficient to support concentrated load(s) 100 lb down at 12-6-0, and 100 lb down at 17-6-0 and 1630 lb down and 404 lb up at 19-5-3 dn top chord, and 1930 lb down and 478 lb up at 5-8-4, and 160 lb down and 40 lb up at 26-8-8 on bottom chord. The design/selection of such connection device(s) is the responsibility of others.

- NOTES
- 2-ply truss to be connected together with 10d (0.148"x3") nails as follows:  
 Top chords connected as follows: 2 X 4 - 1 row at 0-9-0 oc, 2 X 6 - 2 rows at 0-9-0 oc.  
 Bottom chords connected as follows: 2 X 8 - 2 rows at 0-9-0 oc.  
 Webs connected as follows: 2 X 4 - 1 row at 0-9-0 oc, Except member 11-10 2 X 4 - 1 row at 0-3-0 oc.
  - All loads are considered equally applied to all plies, except if noted as front (F) or back (B) face in the LOAD CASE(S) section. Ply to ply connections have been provided to distribute only loads noted as (F) or (B), unless otherwise indicated.
  - Unbalanced roof live loads have been considered for this design.
  - Wind: ASCE 7-02; 120mph (3-second gust); h=15ft; TC DL=5.0psf; BCDL=5.0psf; Category II; Exp B; enclosed; MWFRS gable end zone; cantilever left and right exposed; end vertical left and right exposed. Lumber DOL=1.25 plate grip DOL=1.00.
  - 200.0lb AC unit load placed on the top chord, 15-0-0 from left end, supported at two points, 5-0-0 apart.
  - Provide adequate drainage to prevent water ponding.
  - This truss has been designed for a 10.0 psf bottom chord live load nonconcurrent with any other live loads.
  - As requested, plates have not been designed to provide for placement tolerances or rough handling and erection conditions. It is the responsibility of the fabricator to increase plate sizes to account for these factors.
  - This truss requires plate inspection per the Tooth Count Method when this truss is chosen for quality assurance inspection.
  - Provide mechanical connection (by others) of truss to bearing plate capable of withstanding 721 lb uplift at joint 2, 1364 lb uplift at joint 18, 959 lb uplift at joint 16, 163 lb uplift at joint 22 and 382 lb uplift at joint 23.
  - Load case(s) 1, 2, 3, 4, 5, 6, 7, 8, 9, 10 has/have been modified. Building designer must review loads to verify that they are correct for the intended use of this truss.
  - Girder carries tie-in span(s): 4-6-0 from 6-8-4 to 25-8-8; 4-6-0 from 20-5-0 to 25-8-8
  - Design assumes 4x2 (flat orientation) purlins at oc spacing indicated, fastened to truss TC w/ 2-10d nails.
  - Hanger(s) or other connection device(s) shall be provided sufficient to support concentrated load(s) 100 lb down at 12-6-0, and 100 lb down at 17-6-0, and 1630 lb down and 404 lb up at 19-5-3 on top chord, and 1930 lb down and 478 lb up at 5-8-4, and 160 lb down and 40 lb up at 26-8-8 on bottom chord. design/selection of such connection device(s) is the responsibility of others.

- NOTES**
- 2-ply truss to be connected together with 10d (0.148"x3") nails as follows:  
 Top chords connected as follows: 2 X 4 - 1 row at 0-9-0 oc, 2 X 6 - 2 rows at 0-9-0 oc.  
 Bottom chords connected as follows: 2 X 8 - 2 rows at 0-9-0 oc.  
 Webs connected as follows: 2 X 4 - 1 row at 0-9-0 oc, Except member 10-9 2 X 4 - 1 row at 0-3-0 oc.
  - All loads are considered equally applied to all plies, except if noted as front (F) or back (B) face in the LOAD CASE(S) section. Ply to ply connections have been provided to distribute only loads noted as (F) or (B), unless otherwise indicated.
  - Unbalanced roof live loads have been considered for this design.
  - Wind: ASCE 7-02; 120mph (3-second gust); h=15ft; TCDL=5.0psf; BCDL=5.0psf; Category II; Exp B; enclosed; MWFRS gable end zone; cantilever left and right exposed; end vertical left and right exposed; Lumber DOL=1.25 plate grip DOL=1.00.
  - 200.0lb AC unit load placed on the top chord, 14-0-0 from left end, supported at two points, 5-0-0 apart.
  - Provide adequate drainage to prevent water ponding.
  - This truss has been designed for a 10.0 psf bottom chord live load nonconcurrent with any other live loads.
  - As requested, plates have not been designed to provide for placement tolerances or rough handling and erection conditions. It is the responsibility of the fabricator to increase plate sizes to account for these factors.
  - This truss requires plate inspection per the Tooth Count Method when this truss is chosen for quality assurance inspection.
  - Provide mechanical connection (by others) of truss to bearing plate capable of withstanding 1023 lb uplift at joint 15, 633 lb uplift at joint 1, 1400 lb uplift at joint 16, 171 lb uplift at joint 20 and 374 lb uplift at joint 21.
  - Load case(s) 1, 2, 3, 4, 5, 6, 7, 8, 9, 10 has/have been modified. Building designer must review loads to verify that they are correct for the intended use of this truss.
  - Girder carries tie-in span(s): 4-6-0 from 6-8-4 to 25-8-8; 4-6-0 from 20-5-0 to 25-8-8
  - Design assumes 4x2 (flat orientation) purlins at oc spacing indicated, fastened to truss TC w/ 2-10d nails.
  - Uplift for first LC exceeds limits
  - Hanger(s) or other connection device(s) shall be provided sufficient to support concentrated load(s) 100 lb down at 11-6-0, and 100 lb down at 16-6-0 on top chord, and 1630 lb down and 404 lb up at 19-5-3 on top chord, and 1930 lb down and 478 lb up at 5-8-4, and 160 lb down and 40 lb up at 26-8-8 on bottom chord. The design/selection of such connection device(s) is the responsibility of others.

- NOTES**
- 1) 2-ply truss to be connected together with 10d (0.148"x3") nails as follows:  
 Top chords connected as follows: 2 X 4 - 1 row at 0-9-0 oc, 2 X 6 - 2 rows at 0-9-0 oc.  
 Bottom chords connected as follows: 2 X 8 - 2 rows at 0-9-0 oc.  
 Webs connected as follows: 2 X 4 - 1 row at 0-9-0 oc, Except member 11-10 2 X 4 - 1 row at 0-3-0 oc.
  - 2) All loads are considered equally applied to all plies, except if noted as front (F) or back (B) face in the LOAD CASE(S) section. Ply to ply connections have been provided to distribute only loads noted as (F) or (B), unless otherwise indicated.
  - 3) Unbalanced roof live loads have been considered for this design.
  - 4) Wind: ASCE 7-02, 120mph (3-second gust), h=15ft; TCCL=5.0psf; BCCL=5.0psf; Category II; Exp B; enclosed; MWFRS gable end zone; cantilever left and right exposed ; end vertical left and right exposed; Lumber DOL=1.25 plate grip DOL=1.00.
  - 5) 200.0lb AC unit load placed on the top chord, 15-0-0 from left end, supported at two points, 5-0-0 apart.
  - 6) Provide adequate drainage to prevent water ponding.
  - 7) This truss has been designed for a 10.0 psf bottom chord live load nonconcurrent with any other live loads.
  - 8) As requested, plates have not been designed to provide for placement tolerances or rough handling and erection conditions. It is the responsibility of the fabricator to increase plate sizes to account for these factors.
  - 9) This truss requires plate inspection per the Tooth Count Method when this truss is chosen for quality assurance inspection.
  - 10) Provide mechanical connection (by others) of truss to bearing plate capable of withstanding 1037 lb uplift at joint 16, 721 lb uplift at joint 2, 1378 lb uplift at joint 17, 163 lb uplift at joint 21 and 385 lb uplift at joint 22.
  - 11) Load case(s) 1, 2, 3, 4, 5, 6, 7, 8, 9, 10 has/have been modified. Building designer must review loads to verify that they are correct for the intended use of this truss.
  - 12) Girder carries tie-in span(s): 4-6-0 from 6-8-4 to 25-8-8; 4-6-0 from 20-5-0 to 25-8-8
  - 13) Design assumes 4x2 (flat orientation) purlins at oc spacing indicated, fastened to truss TC w/ 2-10d nails.
  - 14) Uplift for first LC exceeds limits
  - 15) Hanger(s) or other connection device(s) shall be provided sufficient to support concentrated load(s) 100 lb down at 12-6-0, and 100 lb down at 17-6-0, and 1630 lb down and 404 lb up at 19-5-3 on top chord, and 1930 lb down and 478 lb up at 5-8-4, and 160 lb down and 40 lb up at 26-8-8 on bottom chord. The design/selection of such connection device(s) is the responsibility of others.

- NOTES**
- 2-ply truss to be connected together with 10d (0.148"x3") nails as follows:  
 Top chords connected as follows: 2 X 4 - 1 row at 0-9-0 oc, 2 X 6 - 2 rows at 0-9-0 oc.  
 Bottom chords connected as follows: 2 X 8 - 2 rows at 0-9-0 oc.  
 Webs connected as follows: 2 X 4 - 1 row at 0-9-0 oc, Except member 11-10 2 X 4 - 1 row at 0-3-0 oc.
  - All loads are considered equally applied to all plies, except if noted as front (F) or back (B) face in the LOAD CASE(S) section. Ply to ply connections have been provided to distribute only loads noted as (F) or (B), unless otherwise indicated.
  - Unbalanced roof live loads have been considered for this design.
  - Wind: ASCE 7-02; 120mph (3-second gust); h=15ft; TCDL=5.0psf; BCDL=5.0psf; Category II; Exp B; enclosed; MWFRS gable end zone; cantilever left and right exposed; end vertical left and right exposed; Lumber DOL=1.25 plate grip DOL=1.00.
  - 200.0lb AC unit load placed on the top chord, 15-0-0 from left end, supported at two points, 5-0-0 apart.
  - Provide adequate drainage to prevent water ponding.
  - This truss has been designed for a 10.0 psf bottom chord live load nonconcurrent with any other live loads.
  - As requested, plates have not been designed to provide for placement tolerances or rough handling and erection conditions. It is the responsibility of the fabricator to increase plate sizes to account for these factors.
  - This truss requires plate inspection per the Tooth Count Method when this truss is chosen for quality assurance inspection.
  - Provide mechanical connection (by others) of truss to bearing plate capable of withstanding 731 lb uplift at joint 2, 1460 lb uplift at joint 18, 1452 lb uplift at joint 16 and 189 lb uplift at joint 22.
  - Load case(s) 1, 2, 3, 4, 5, 6, 7, 8, 9, 10 has/have been modified. Building designer must review loads to verify that they are correct for the intended use of the truss.
  - Girder carries tie-in span(s): 4-6-0 from 6-8-4 to 25-8-8; 4-6-0 from 20-5-0 to 25-8-8
  - Design assumes 4x2 (flat orientation) purlins at oc spacing indicated, fastened to truss TC w/ 2-10d nails.
  - Uplift for first LC exceeds limits
  - Hanger(s) or other connection device(s) shall be provided sufficient to support concentrated load(s) 100 lb down at 12-6-0, and 100 lb down at 17-6-0 and 1630 lb down and 404 lb up at 19-5-3 on top chord, and 1930 lb down and 478 lb up at 5-8-4, and 180 lb down and 40 lb up at 26-8-8 on bottom chord. The design/selection of such connection device(s) is the responsibility of others.

LOAD CASE(S) Standard Except:

- NOTES**
- Unbalanced roof live loads have been considered for this design.
  - Wind: ASCE 7-02; 120mph (3-second gust); h=15ft; TCCL=5.0psf; BCDL=5.0psf; Category II; Exp B; enclosed; MWFRS gable end zone; cantilever left and right exposed; end vertical left and right exposed; Lumber DOL=1.25 plate grip DOL=1.00.
  - Provide adequate drainage to prevent water ponding.
  - This truss has been designed for a 10.0 psf bottom chord live load nonconcurrent with any other live loads.
  - As requested, plates have not been designed to provide for placement tolerances or rough handling and erection conditions. It is the responsibility of the fabricator to increase plate sizes to account for these factors.
  - This truss requires plate inspection per the Tooth Count Method when this truss is chosen for quality assurance inspection.
  - Provide mechanical connection (by others) of truss to bearing plate capable of withstanding 397 lb uplift at joint 2, 671 lb uplift at joint 18 and 484 lb uplift at joint 16.
  - A + following a basic load indicates that the load has been modified in one or more load cases.
  - Load case(s) 1, 2, 3, 4, 5, 6, 7, 8, 9, 10 has/have been modified. Building designer must review loads to verify that they are correct for the intended use of this truss.
  - Design assumes 4x2 (flat orientation) purlins at oc spacing indicated, fastened to truss TC w/ 2-10d nails.
  - In the LOAD CASE(S) section, loads applied to the face of the truss are noted as front (F) or back (B).

**LOAD CASE(S)** Standard Except:

- NOTES**
- 1) Unbalanced roof live loads have been considered for this design.
  - 2) Wind: ASCE 7-02; 120mph (3-second gust); h=15ft; TCDL=5.0psf; BC DL=5.0psf; Category II; Exp B; enclosed; MWFRS gable end zone; cantilever left and right exposed ; end vertical left and right exposed; Lumber DOL=1.25 plate grip DOL=1.00.
  - 3) Provide adequate drainage to prevent water ponding.
  - 4) This truss has been designed for a 10.0 psf bottom chord live load nonconcurrent with any other live loads.
  - 5) As requested, plates have not been designed to provide for placement tolerances or rough handling and erection conditions. It is the responsibility of the fabricator to increase plate sizes to account for these factors.
  - 6) This truss requires plate inspection per the Tooth Count Method when this truss is chosen for quality assurance inspection.
  - 7) Provide mechanical connection (by others) of truss to bearing plate capable of withstanding 868 lb uplift at joint 16, 406 lb uplift at joint 2 and 520 lb uplift at joint 17.
  - 8) Load case(s) 1, 2, 3, 4, 5, 6, 7, 8, 9, 10 has/have been modified. Building designer must review loads to verify that they are correct for the intended use of this truss.
  - 9) Design assumes 4x2 (flat orientation) purlins at oc spacing indicated, fastened to truss TC w/ 2-10d nails.
  - 10) In the LOAD CASE(S) section, loads applied to the face of the truss are noted as front (F) or back (B).

**LOAD CASE(S) Standard Except:**

- NOTES**
- 1) Unbalanced roof live loads have been considered for this design.
  - 2) Wind: ASCE 7-02; 120mph (3-second gust); h=15ft; TCCL=5.0psf; BCDL=5.0psf; Category II; Exp B; enclosed; MWFRS gable end zone; cantilever left and right exposed ; end vertical left and right exposed; Lumber DOL=1.25 plate grip DOL=1.00.
  - 3) Provide adequate drainage to prevent water ponding.
  - 4) This truss has been designed for a 10.0 psf bottom chord live load nonconcurrent with any other live loads.
  - 5) As requested, plates have not been designed to provide for placement tolerances or rough handling and erection conditions. It is the responsibility of the fabricator to increase plate sizes to account for these factors.
  - 6) This truss requires plate inspection per the Tooth Count Method when this truss is chosen for quality assurance inspection.
  - 7) Provide mechanical connection (by others) of truss to bearing plate capable of withstanding 406 lb uplift at joint 2, 509 lb uplift at joint 18 and 791 lb uplift at joint 16.
  - 8) Load case(s) 1, 2, 3, 4, 5, 6, 7, 8, 9, 10' has/have been modified. Building designer must review loads to verify that they are correct for the intended use of this truss.
  - 9) Design assumes 4x2 (flat orientation) purlins at oc spacing indicated, fastened to truss TC w/ 2-10d nails.
  - 10) In the LOAD CASE(S) section, loads applied to the face of the truss are noted as front (F) or back (B).

**LOAD CASE(S)** Standard Except:  
 1) Regular: Lumber Increase=1.25, Plate Increase=1.00  
 Uniform Loads (plf)  
 Vert: 1-5=60, 5-6=60, 11-12=60, 12-14=60, 14-17=60, 2-24=40, 20-24=140(F=-100), 16-20=60(F=-20), 6-11=60  
 2) IBC BC Live: Lumber Increase=1.25, Plate Increase=1.25  
 Uniform Loads (plf)  
 Vert: 1-5=20, 5-6=20, 11-12=20, 12-14=20, 14-17=20, 2-24=40, 20-24=60(F=-20), 16-20=40, 6-11=20  
 3) MWFRS Wind Left: Lumber Increase=1.25, Plate Increase=1.00

- NOTES**
- 1) Unbalanced roof live loads have been considered for this design.
  - 2) Wind: ASCE 7-02; 120mph (3-second gust); h=15ft; TCCL=5.0psf; BCDL=5.0psf; Category II; Exp B; enclosed; MWFRS gable end zone; cantilever left and right exposed; and vertical left and right exposed; Lumber DOL=1.25 plate grip DOL=1.00.
  - 3) Truss designed for wind loads in the plane of the truss only. For studs exposed to wind (normal to the face), see MITek "Standard Gable End Detail"
  - 4) Provide adequate drainage to prevent water ponding.
  - 5) This truss has been designed for a 10.0 psf bottom chord live load nonconcurrent with any other live loads.
  - 6) As requested, plates have not been designed to provide for placement tolerances or rough handling and erection conditions. It is the responsibility of the fabricator to increase plate sizes to account for these factors.
  - 7) All plates are 1x4 MI120 unless otherwise indicated.
  - 8) This truss requires plate inspection per the Tooth Count Method when this truss is chosen for quality assurance inspection.
  - 9) Gable requires continuous bottom chord bearing.
  - 10) Gable studs spaced at 2-0-0 oc.
  - 11) Bearing at joint(s) 37 considers parallel to grain value using ANSI/TPI 1 angle to grain formula. Building designer should verify capacity of bearing surface.
  - 12) Provide mechanical connection (by others) of truss to bearing plate capable of withstanding 168 lb uplift at joint 1, 102 lb uplift at joint 19, 87 lb uplift at joint 27, 103 lb uplift at joint 28, 75 lb uplift at joint 31, 177 lb uplift at joint 32, 181 lb uplift at joint 33, 184 lb uplift at joint 34, 157 lb uplift at joint 35, 173 lb uplift at joint 24, 181 lb uplift at joint 23, 192 lb uplift at joint 22, 49 lb uplift at joint 21, 264 lb uplift at joint 20 and 158 lb uplift at joint 37.

- NOTES**
- 1) Unbalanced roof live loads have been considered for this design.
  - 2) Wind: ASCE 7-02; 120mph (3-second gust); h=15ft; TCCL=5.0psf; BCDL=5.0psf; Category II; Exp B; enclosed; MWFRS gable end zone; cantilever left and right exposed; end vertical left and right exposed; Lumber DOL=1.25 plate grip DOL=1.00.
  - 3) Truss designed for wind loads in the plane of the truss only. For studs exposed to wind (normal to the face), see MiTek "Standard Gable End Detail"
  - 4) Provide adequate drainage to prevent water ponding.
  - 5) This truss has been designed for a 10.0 psf bottom chord live load nonconcurrent with any other live loads.
  - 6) As requested, plates have not been designed to provide for placement tolerances or rough handling and erection conditions. It is the responsibility of the fabricator to increase plate sizes to account for these factors.
  - 7) All plates are 1x4 MIL20 unless otherwise indicated.
  - 8) This truss requires plate inspection per the Tooth Count Method when this truss is chosen for quality assurance inspection.
  - 9) Gable studs spaced at 2'-0-0 oc.
  - 10) Bearing at joint(s) 37 considers parallel to grain value using ANSI/TPI 1 angle to grain formula. Building designer should verify capacity of bearing surface.
  - 11) Provide mechanical connection (by others) of truss to bearing plate capable of withstanding 188 lb uplift at joint 1, 86 lb uplift at joint 19, 90 lb uplift at joint 27, 119 lb uplift at joint 28, 117 lb uplift at joint 31, 174 lb uplift at joint 32, 181 lb uplift at joint 33, 184 lb uplift at joint 34, 157 lb uplift at joint 35, 322 lb uplift at joint 23, 134 lb uplift at joint 22, 5 lb uplift at joint 21, 267 lb uplift at joint 20 and 184 lb uplift at joint 37.

- 5) This truss requires plate inspection per the Tooth Count Method when this truss is chosen for quality assurance inspection.
- 6) Refer to girder(s) for truss to truss connections.
- 7) Provide mechanical connection (by others) of truss to bearing plate capable of withstanding 119 lb uplift at joint 4 and 119 lb uplift at joint 3.
- 8) Hanger(s) or other connection device(s) shall be provided sufficient to support concentrated load(s) 3 lb down and 28 lb up at 1-5-0 on top chord, and 7 lb up at 1-5-0 on bottom chord. The design/selection of such connection device(s) is the responsibility of others.
- 9) In the LOAD CASE(S) section, loads applied to the face of the truss are noted as front (F) or back (B).

**LOAD CASE(S)** Standard

- 1) Regular: Lumber Increase=1.25, Plate Increase=1.00  
Uniform Loads (plf)  
Vert: 1-2=-60, 3-4=-40  
Concentrated Loads (lb)  
Vert: 5=10(F) 6=7(F)

# PRODUCT APPROVAL SPECIFICATION SHEET

As required by Florida Statute 553.842 and Florida Administrative Code 9B-72, please provide the information and approval numbers on the building components listed below if they will be utilized on the construction project for which you are applying for a building permit. We recommend you contact your local product supplier should you not know the product approval number for any of the applicable listed products. Statewide approved products are listed online @ [www.floridabuilding.org](http://www.floridabuilding.org)

| Category/Subcategory                     | Manufacturer       | Product Description            | Approval Number(s) |
|--|--------------------|--------------------------------|--------------------|
| <b>1. EXTERIOR DOORS</b>                 | MASONITE           | METAL EDGE STEEL DOORS         | 4242.1             |
| A. SWINGING                              |                    |                                |                    |
| B. SLIDING                               |                    |                                |                    |

The products listed below did not demonstrate product approval at plan review. I understand that at the time of inspection of these products, the following information must be available to the inspector on the jobsite; 1) copy of the product approval, 2) performance characteristics which the product was tested and certified to comply with, 3) copy of the applicable manufacturers installation requirements. Further, I understand these products may have to be removed if approval cannot be demonstrated during inspection.

#### HEATING EQUIPMENT

Make Ruud  
Trade Ruud UPNE Series  
Model UPNE-018J\*Z

Efficiency 8.5 HSPF  
Heating input 17300 Btuh @ 47°F  
Temperature rise 26 °F  
Actual air flow 613 cfm  
Air flow factor 0.060 cfm/Btuh  
Static pressure 0.65 in H2O  
Space thermostat

#### COOLING EQUIPMENT

Make Ruud  
Trade Ruud UPNE Series  
Cond UPNE-018J\*Z  
Coil UHSA-HM1817+RCSA-H\*2417A\*

Efficiency 13 SEER  
Sensible cooling 12880 Btuh  
Latent cooling 5520 Btuh  
Total cooling 18400 Btuh  
Actual air flow 613 cfm  
Air flow factor 0.055 cfm/Btuh  
Static pressure 0.65 in H2O  
Load sensible heat ratio 0.81

ENGINEERING CONSULTANTS IN GEOTECHNICAL • ENVIRONMENTAL • CONSTRUCTION MANAGEMENT

January 22, 2007  
Project No. 07139.70

Ms. Terry Cummings  
Americas Home Place  
3101 SW 34<sup>th</sup> Avenue, Suite 902  
Ocala, Florida 34474

Project: Brown Residence, 350 Cumberland Street, Ft. White, Columbia County, Florida  
**Soil Bearing Capacity**

Dear Ms. Cummings:

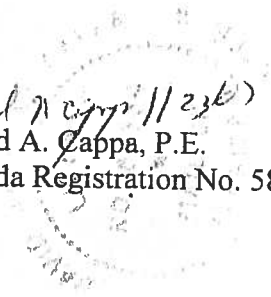

As requested, Geo-Technologies, Inc. (GTI) visited the above referenced project site on January 18, 2007. The purpose of our visit was to perform static cone penetrometer readings in the proposed building area to determine soil bearing capacities. Six (6) borings with penetrometer readings were performed to depths of about four (4) feet below existing site grade. Based on the results of the penetrometer readings, the maximum allowable bearing capacity of the soils found on site is approximately 2,500 pounds per square foot.

GTI trusts this report is sufficient to meet your immediate needs. Should you have any questions concerning this report or if we may be of further assistance, please do not hesitate to contact the undersigned.

Sincerely,

  
Eric Lukas  
Project Manager

To: Building Department  
Subject: Field Revisions  
Project: Brown Residence

Dear Building Official:

In lieu of the original plan specifications, we have reviewed the subject / project and approve of the following:

1. Mono footing per attached detail.

If you have any questions please call me at the Winter Park office.

Thank you,

J. Lee Smith
