

Ichetucknee Trace
Clay Hole Creek/Alligator Lake

Aquifer Recharge and Stormwater Mitigation

The proposed project will improve the water quality and quantity within the Ichetucknee Springs basin. Alligator Lake and Clay Hole Creek Basins are part the Ichetucknee Trace and proven to be directly connected to Ichetucknee Springs. The project will include improvements such as: aquifer recharge, increase in storage capacity and attenuation, erosion control protection, stormwater control structures to promote more efficient use of existing storage, stormwater forcemain construction, and stormwater pumping stations.

EXISTING SYSTEM

PROPOSED SYSTEM

- Project 2021-02 was placed out for bid in May of 2021
- Bids were received June 7, 2021
- Low Bid was CA Boone at \$939,636.00
- Estimated Construction Start Date – August 2021
- Estimate Construction Completion Date – June 2022
